

How to play Revive Blox Fruit

The Revive or Soul fruit, the Blox Fruit Revival is a super power-type Devil fruit in Blox Fruit added in Update 16. It costs 550,000 coins or 975 Robux, from the Blox Fruit Dealer.

The Resurrection Fruit is green and translucent, but it has a skull-shaped body with eyes. Depending on your location you will see it brighter or darker.

Although it may not be on the list of the most powerful Blox Fruits, it has the ability to strengthen the player's soul to the point that they can resurrect after dying once. Stay alive until the eater's body takes damage long enough and uses some other soul-based skill. Making the player a resurrected player, you can enter the Blox Fruit code to level up and buy a Resurrection fruit.

The skill set of the Soul fruit

Picture 1 of How to play Revive Blox Fruit

1. Possession - 1 Mastery: The player appears to leave its body and transform into a translucent green ghost. Any entities that come in contact will be frozen and damaged.
2. Soul Domination - 60 Mastery: The player releases a skull-shaped green mist around himself, causing an explosion and stunning nearby enemies.
3. Revival - 110 Mastery: If the user dies while casting C active, they will be resurrected with 50% of their original health and turn the user into a skeleton.
4. Soul Wandering - 30 Mastery: The user's soul leaves their body, able to fly around for a short period of time. The user's original body is left behind and if attacked, they will be released from their spirit form.

Advantages and disadvantages

Picture 2 of How to play Revive Blox Fruit

Advantage:

1. Combines well with Soul Cane (soul stick) because of its fairly fast attack.
2. Break nature.
3. Most of its moves have good AOE (large range).
4. Can freeze and stun opponents.
5. Two of them are attacks that stun enemies.

6. Can give the user a second life.
7. Cheap
8. No high level of proficiency is required.
9. The potential to combine with other Devil Fruits is great.
10. Can easily counter one-shot combos (albeit at the expense of your second life).
11. Can surprise enemies.
12. Good mobility.
13. Skill F can be a reliable card in PvP because of its speed and the fact that your ghost body is immortal (so you can teleport with this skill).
14. You can still get injured while in your physical form, but you will be immortal in your ghost form. However, you can still get hurt in your physical body.
15. One of the best Trolling Fruits.

Defect:

1. This is a mobile skill set that leaves you unprotected and limited in time.
2. It can only move at low altitude.
3. It only has two attack moves.
4. The F skill is not good when moving from island to island because of the limited distance and you can't use it on the water as you will take damage (unless you have the v2/v3 Fishman race).
5. Using respawn for a second life prevents you from using other fruits that can give a better pvp advantage (e.g. thunder fruit and Portal for fast travel).
6. Not ideal for practice due to lack of (natural) logarithmic immunity and damage moves.
7. Must move to be able to do the best damage.
8. Your body can be attacked (this will destroy your flying spirit form) during the respawn flight.
9. Ground based and not very good against combos although you can run when your first life is over.

Some tips about the Revive fruit in Blox Fruit

Picture 3 of How to play Revive Blox Fruit

1. The Revival Fruit is currently the only fruit that can revive the user.
2. You can move your body on Blox Fruit PC by using the keys on the WASD keyboard during the movement on the fly.
3. Revive is one of the only two fruits that can freeze an opponent (the other being Ice).
4. Revive F Wandering souls should go through walls, but the developers created a small cube inside the spirit form to undo this.
5. The weapon representing this fruit is the Soul Cane.
6. Moves Z and F have a small gray block in the user's profile picture. When using Z in the first person, the cube rotates. Move F just inside the user's avatar, do nothing.
7. The total travel time/distance of the Revive fruit's F move is roughly equal to the length of the Pirate Village (going from behind where there are beasts all the way to the harbor).
8. When you respawn as a skeleton from your skill, the skeleton is actually a Roblox Rthro Animation pack called Skelly. It also removes hair from this pack.

9. When you respawn as a skeleton from a respawn, the skeleton will be normal without the clothes, however if you use the jacket from Roblox, the jacket will stay, this is a Roblox bug that occurs in most all games. This only works in specific Roblox accessories.
10. When you use the revived F, your physical body can take damage, and if you use it while you're right on the water, you'll take damage.

In general, the Resurrection fruit simply revives you after a previous death. The skill of the Resurrection fruit in the game may not have as many damage skills as the Bomb , Rubber , and Concussion in Blox Fruit , but with the stun feature, you can take advantage of it and support your allies. around yourself.
