

How to prevent iPhoto from starting automatically?

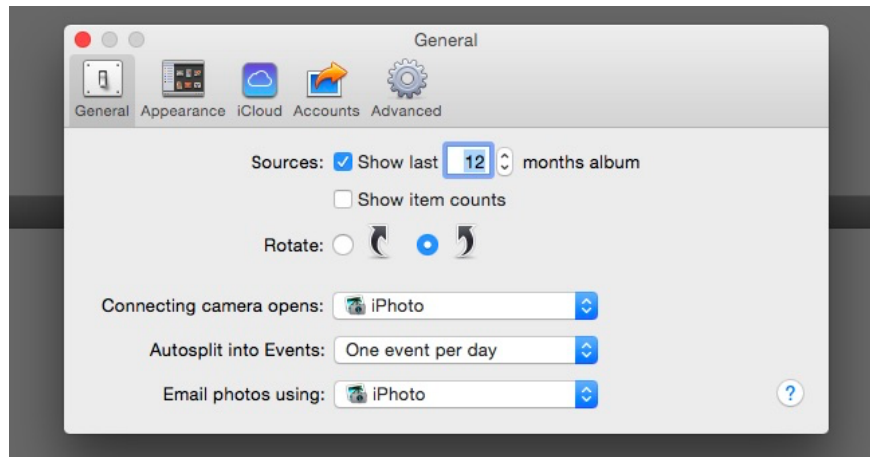

When you plug in any device that contains the DCIM folder on Mac OS X, the iPhoto application will immediately launch and start scanning for data. So how to disable (disable) iPhoto automatically launch when you plug in iPhone, iPad or memory card on Mac OS X?

When you plug in any device that contains the DCIM folder on Mac OS X, the iPhoto application will immediately launch and start scanning for data. This sometimes makes you feel uncomfortable and annoying. How to disable (disable) iPhoto automatically launches when you plug in an iPhone, iPad or memory card on Mac OS X. Please refer to the following article of Network Administration.

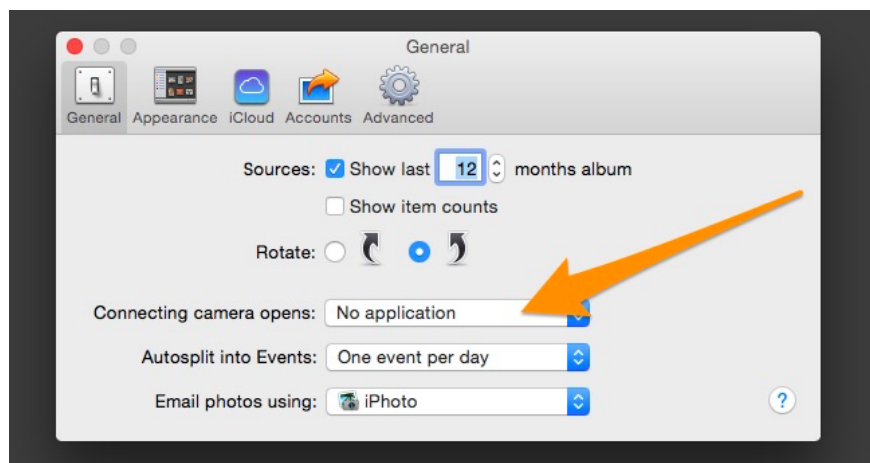

1. Disable (turn off) iPhoto automatically launches

First open iPhoto then select **Preference** on the Menu bar. In the **Connecting camera opens option** you will see a drop-down menu.

In this Menu you just need to change **iPhoto** to **No Application** .

iPhoto hours will no longer start automatically.

2. How to disable (turn off) iPhoto automatically launch with only 1 device?

If you want iPhoto to only automatically start when you plug in the camera memory card without automatically launching when you plug in the iPhone, you can adjust on each of your devices.

First open the **Image Capture** application.

In the bottom left corner you will see a small arrow icon. Click on that arrow icon to display the options extension. You can change between settings like **No application**, **iPhoto**, **Preview**, or whatever option you want.

Set your iPhone to **No application** and set the memory card to default, or the way you want.
