

# How to prevent WiFi automatically turn on on Android

You may find that WiFi on Android phones automatically turns on when you're near known or strong networks. In today's article, TipsMake.com will show you how to prevent Android phones from turning on WiFi automatically.

We connect to the Internet almost 24/7 - by phone and TV or via smart speakers. But maybe you want to turn off WiFi occasionally, so your mind doesn't get caught up in online pleasures.

However, you may find that WiFi on Android phones automatically turns on when you are near strong or known networks. In today's article, **TipsMake.com** will show you how to prevent Android phones from turning on WiFi automatically.

By default, Android phones can automatically turn on WiFi when you're near one of the saved networks, but you don't always want this to happen!

To turn off this feature, go to **Settings> Network & Internet> Wi-Fi> Wi-Fi preferences** .

## Wi-Fi preferences

### Turn on Wi-Fi automatically

Wi-Fi will turn back on near high-quality saved networks, like your home network

### Connect to open networks

Automatically connect to high-quality public networks

### Open network notification

Notify when a high-quality public network is available

### Advanced

Install certificates, Network rating provider,...

Turn off Turn on Wi-Fi automatically and Connect to open networks

All operations are completed! Now you can fully control the connection with surrounding WiFi in your own way. This will help you save battery power for your phone, giving you more control over the flow of information coming from the app's app store.

While 'tinkering' on your Android phone, why not try to find out how to find downloaded files on your device? To dig deeper, you should install TWRP Recovery, a tool that gives you more control over your data, sideload applications and handle many other functions.
