

How to print a PDF file - The easiest way to print a PDF document

How to print a PDF file - The easiest way to print a PDF document. Currently, there are quite a lot of software used to read PDF files on the technology market, but the most popular is Adobe's product: Adobe Reader or a lightweight product familiar to those who use it.

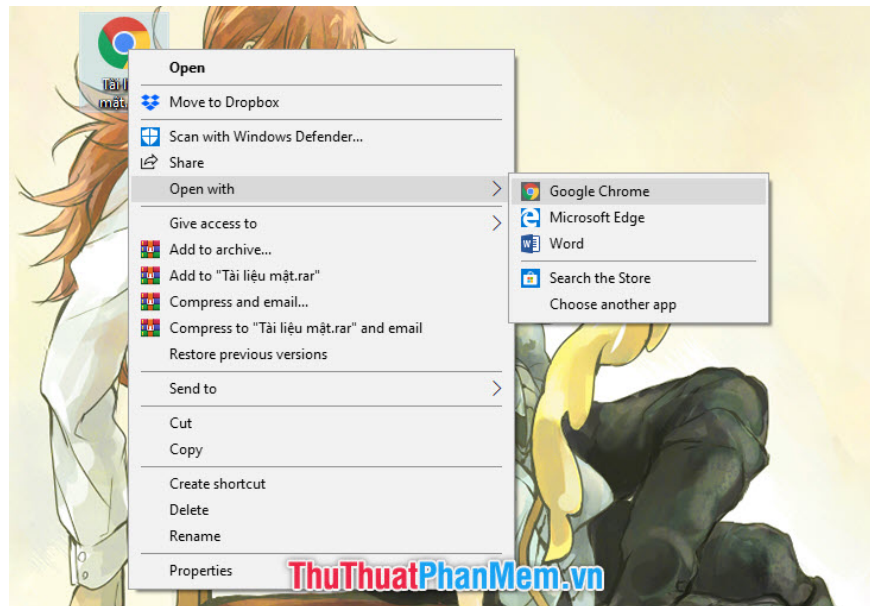

1. Print a PDF file without the software to read the PDF file

If you do not have a PDF reader software, you can print the PDF file using web browsers.

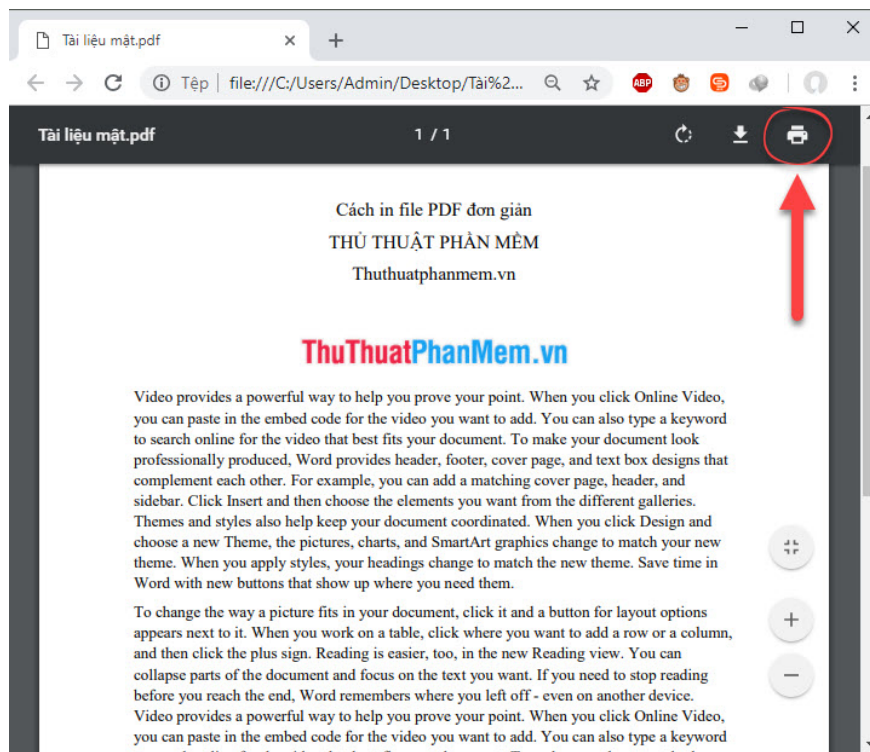

1.1. Print the PDF file using Chrome browser

First you have to open the PDF in Chrome browser by right clicking on the PDF file.

Select **Open with** and then select **Google Chrome** .

Your PDF file will be opened in the Chrome browser with the interface as the image below. You can view your PDF files right in the browser background.

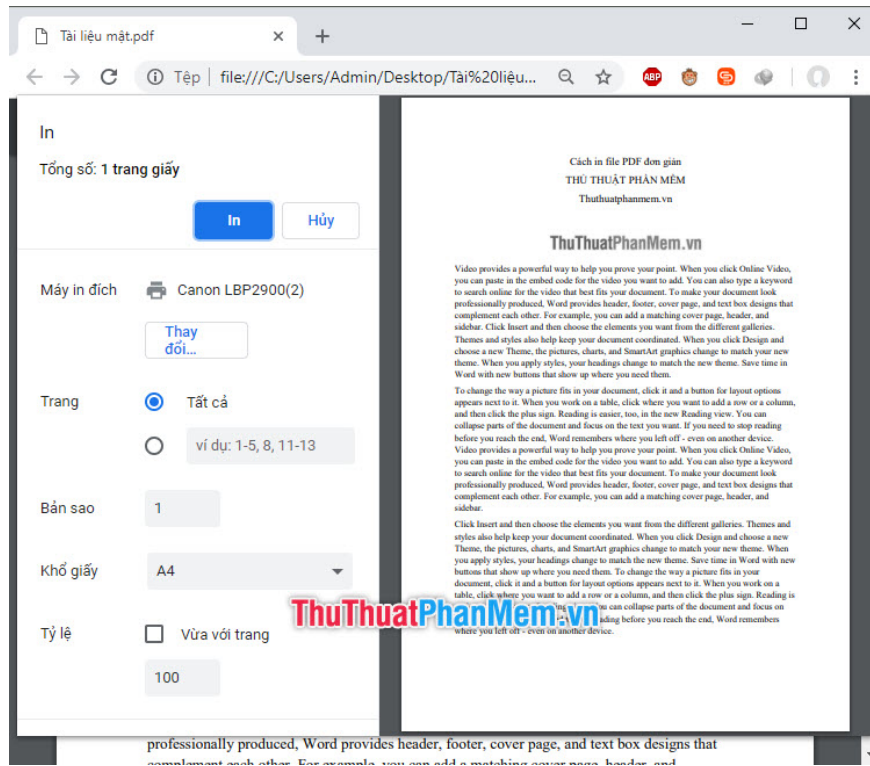

Click the printer icon in the corner of the browser interface. Or use the key combination **Ctrl + P**.

The Print interface will appear telling you Total PDF pages to print, the selected printer and other related settings such as:

- **Page** (set the pages to be printed)

- **Copy** (set the number of copies to be printed)
- **Paper size** (set the appropriate paper size for documents and print media)
- **Percentage** (You can choose the right scale with the original 100% PDF or increase or decrease as you like)

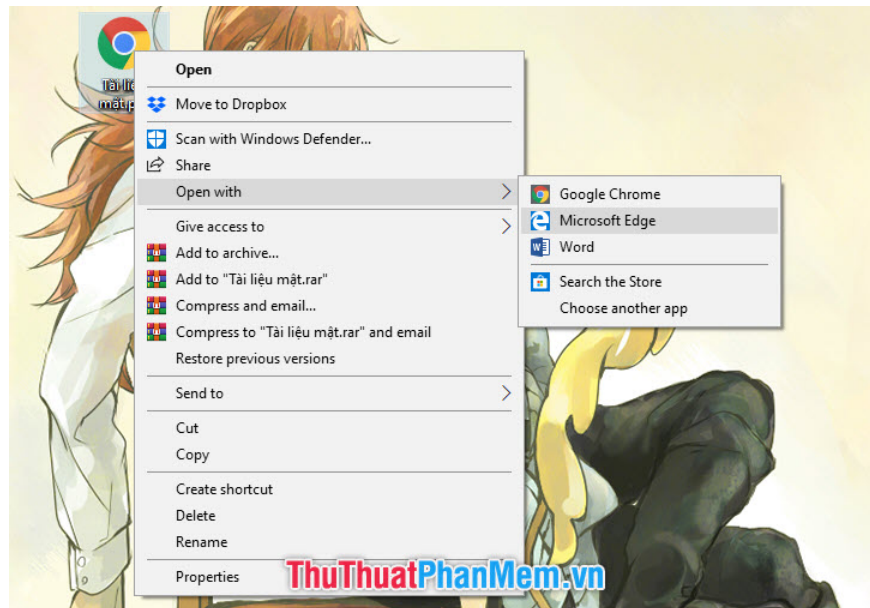

After installation is complete, select **Print** to begin the printing process.

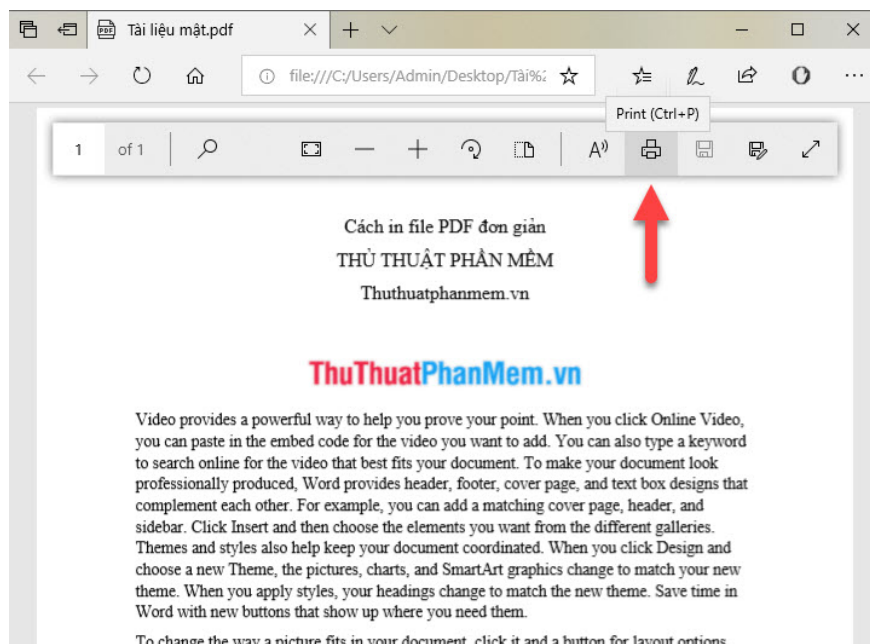

1.2. Print the PDF file using the Edge browser

Like printing with Chrome browser, to print using Edge, you need to open the PDF file with this browser first.

Right-click the PDF file you want to print, select **Open with**, and then select **Microsoft Edge** .

You can review your PDF file in the interface of this browser. Then, select the **Print** printer icon or use the **Ctrl P** key combination .

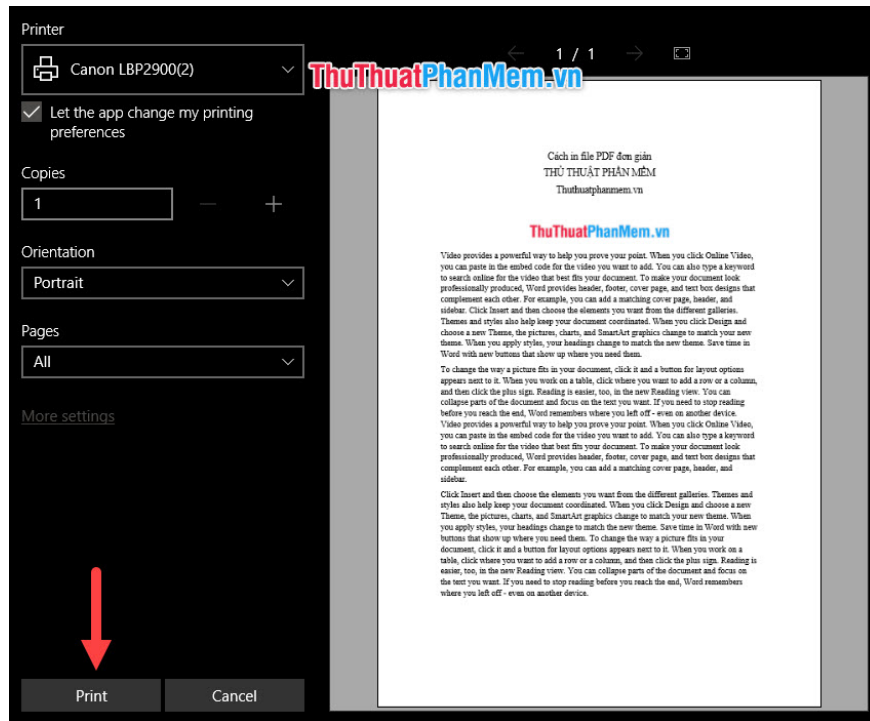

Edge's print interface will appear. You can select the printer in the left corner of this interface.

Below is the number of copies you want.

Orientation is the page rotation mode, rotate horizontally or vertically.

Pages is the setting for viewing which pages to print.

When all is done, select **Print** to send the print job.

With other browsers, most methods are quite simple and similar. Above I just do two browsers as an example.

2. Print a PDF file with the .pdf reader software

Currently, there are quite a lot of software used to read PDF files on the technology market, but the most popular one is the Adobe product: **Adobe Reader** or a lightweight product familiar to people who use PDF files as **Foxit Reader**.

If you want to use a product that integrates many functions to interact with PDF files, you can choose **Adobe Reader** but this guy can take up quite a bit of space in your computer. If you want a more compact version, you can choose **Foxit Reader**.

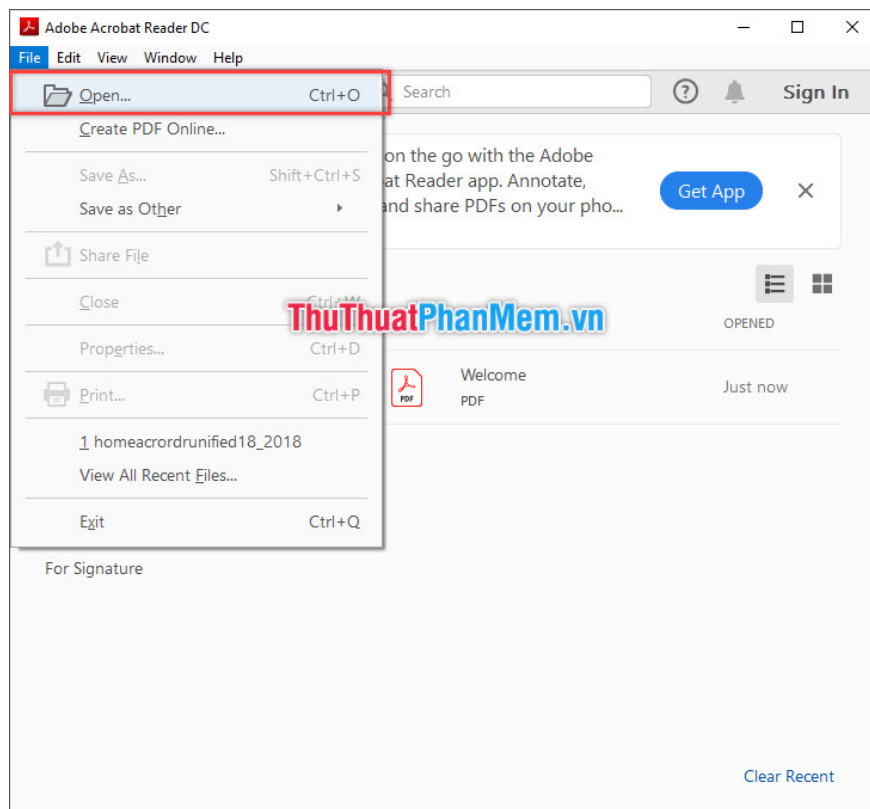

2.1. Print PDF files with Adobe Reader

Download Adobe Reader [HERE](#).

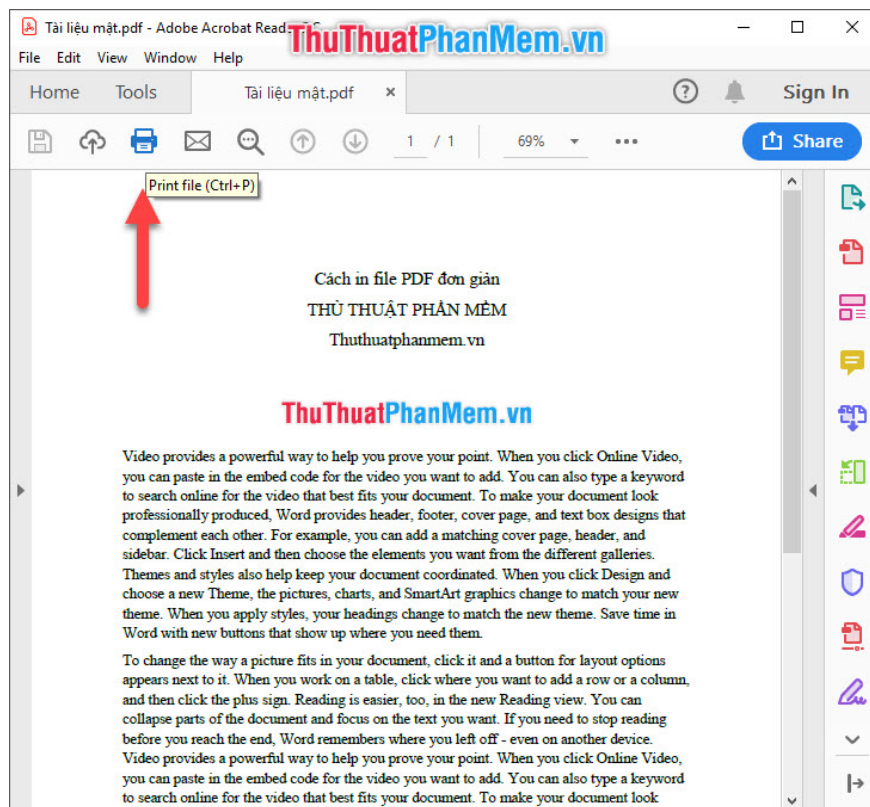

After downloading Adobe Reader, open it.

First, open the PDF file you want to print using Adobe Reader. Select File in the left corner of the toolbar, then select **Open**.

Or use the key combination **Ctrl + O**.

Select the PDF file to print and then **Open** to open it. After the PDF file is opened, it will have the interface as shown below. You can freely review the PDF file to print or edit it with the tools on the right.

Click on the printer icon **Print File** on the toolbar or use the key combination **Ctrl + P** .

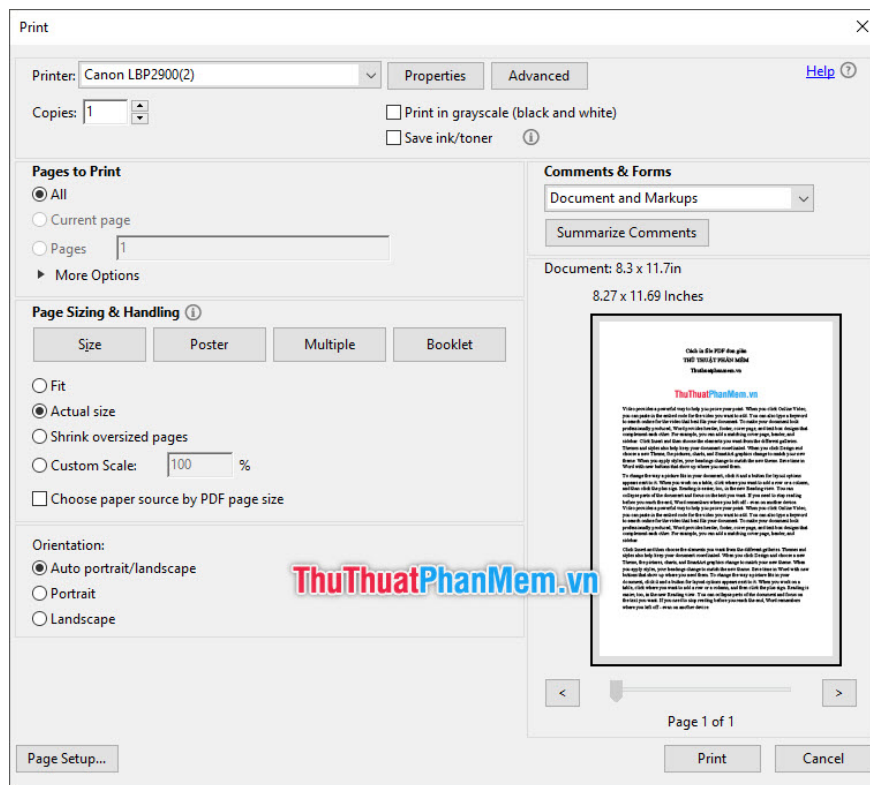

The PDF printing interface will appear shortly.

Printer : Used to select the printer.

Copies : To select the number of copies to print.

Pages to Print : To select the pages you want to print. Select **All** to print all pages in the PDF file, select **Current page** to print the current page (currently displayed on the preview screen on the right), select Pages with numbers to print the pages corresponding to that page number. .

Page Sizing & Handling to choose the paper size when printing.

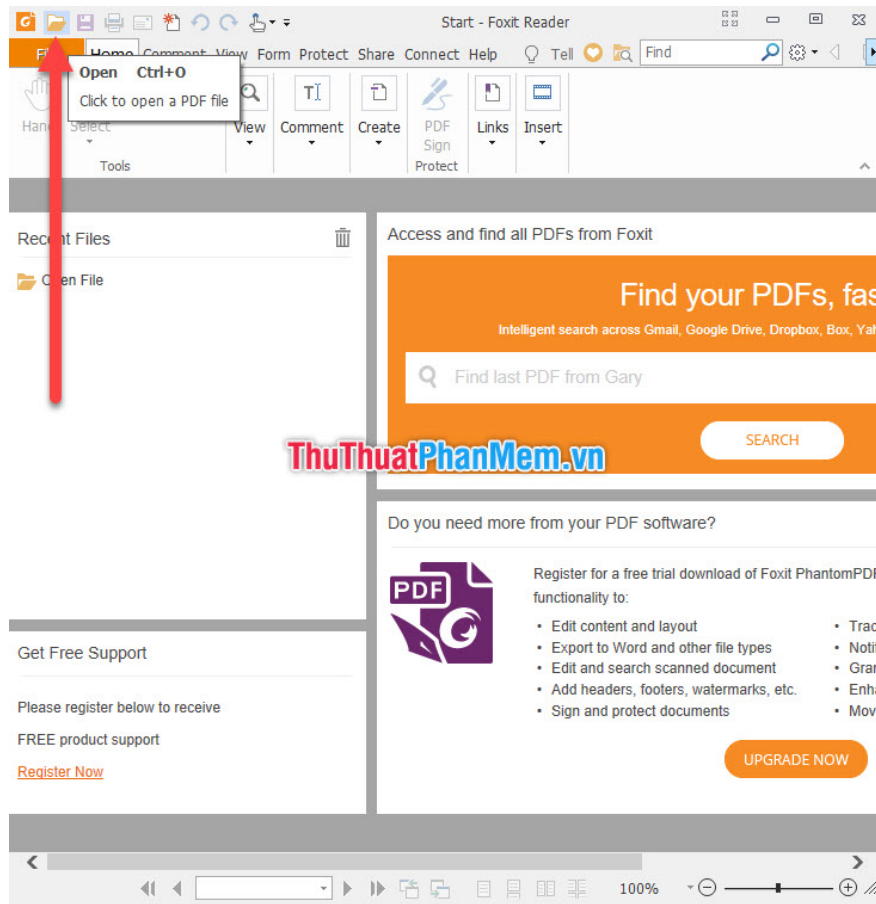

Wrong when the installation is complete, select Print to send the print job to the printer.

2.2. Print the PDF file with Foxit Reader

Download Foxit Reader [HERE](#).

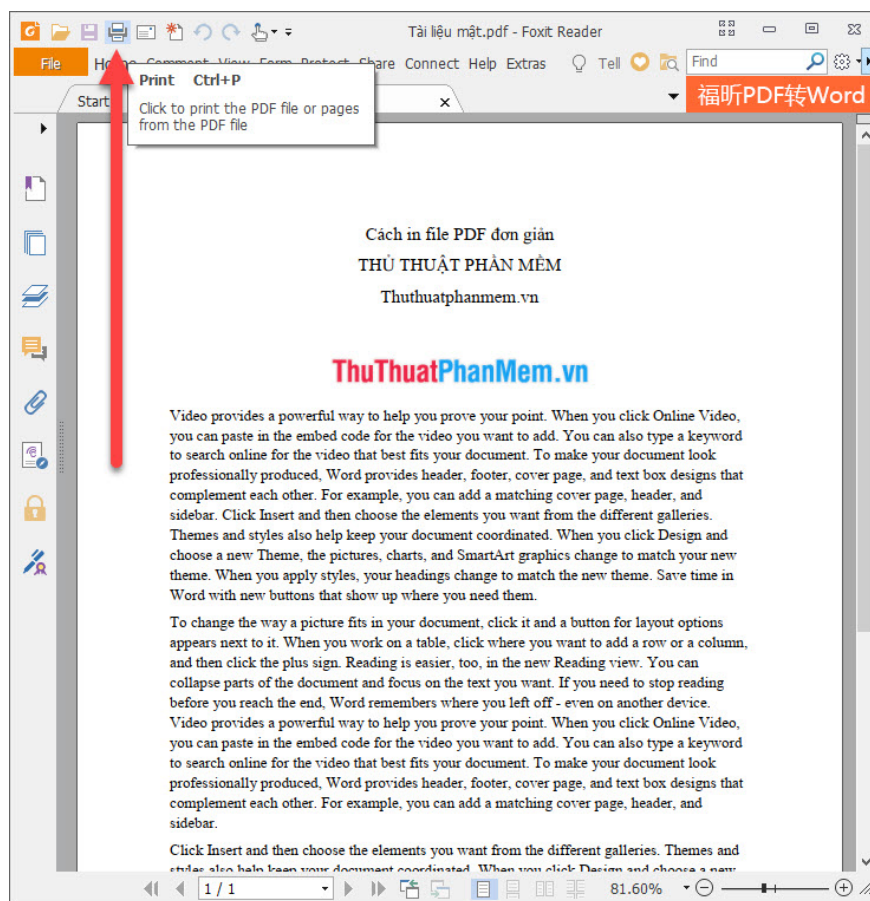

After installing Foxit Reader, open it.

Open the file with Foxit Reader, click the **Open** icon on the **Quick Access Toolbar** or use the **Ctrl O** key combination .

After opening the PDF file, you can view and edit your document file using the editing tools on the left.

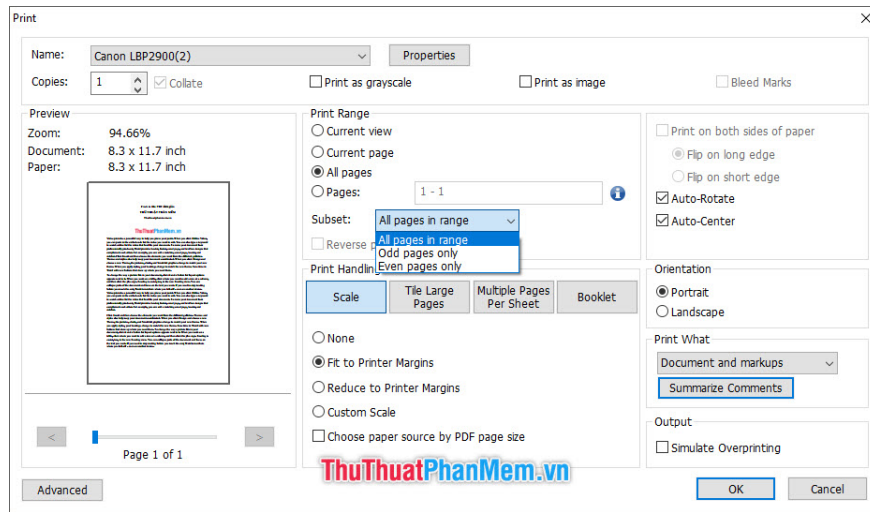

To start printing the PDF, select the **Print** icon on the **Quick Access Toolbar** or use the **Ctrl P** key combination

The Print interface will appear, select the necessary settings:

- **Name** : Select a machine to print
- **Copies** : Select the number of copies when printing
- **Print as grayscale / Print as image** : Black and white printing / color printing
- **Print Range** : Select the number of printed pages, you can choose to print the current page (print the page displayed in **Preview - Current view**), print the current page when clicking the Print (**Current page**) icon or print all the pages in PDF files (**All pages**), can also print specific pages (**Pages** and specific page numbers)
- Subset** : Selective again from the pages selected above. **All pages in range** to print only all pages as selected above, **Odd pages only** prints only odd pages of the pages selected above, **Even pages only** prints only even pages among the selected pages. on.
- Reverse pages** : When you check this box, you choose to print all pages except the ones you selected above.
- **Print Handling** : Choose the size of PDF files compared to the paper. Size options here, you can watch directly in Preview to see if you want it.
- **Orientation** : Select the rotation of the paper, vertical (**Portrait**) or horizontal (**Landscape**).

After selecting all print settings, click **OK** to send the job to the printer.
