Print the contents of folders in Windows 10 using the Command Prompt

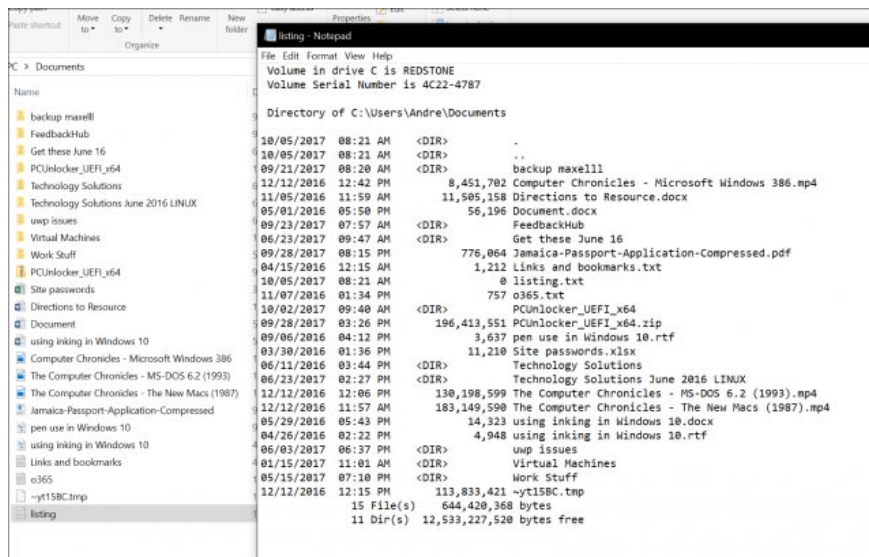

If you only want to print a list of content within a folder, follow these 3 steps:

1. Open Command Prompt with administrator privileges by going to the **Start** menu, typing the search term '**CMD**', right-clicking on the returned result and clicking **Run as administrator**.
2. Enter the directory address where you want to print the structure using the **cd** command, for example: '**cd c:\users\andre\documents**'.
3. Enter the following command and press **Enter**: **dir> list.txt**

The above operations will help create a basic text file that lists the current contents of the directory. You can save arbitrary file names. You can call it list.txt, files.txt, folder.txt or anything else.
