

# How to print website content on paper for reference

When you're browsing the web and find an important piece of news that you want to print right away for reference or archiving, for some of you who don't know your browser's print functionality will most likely be blacked out. set a webpage with Ctrl A and then copy it to Word to print.

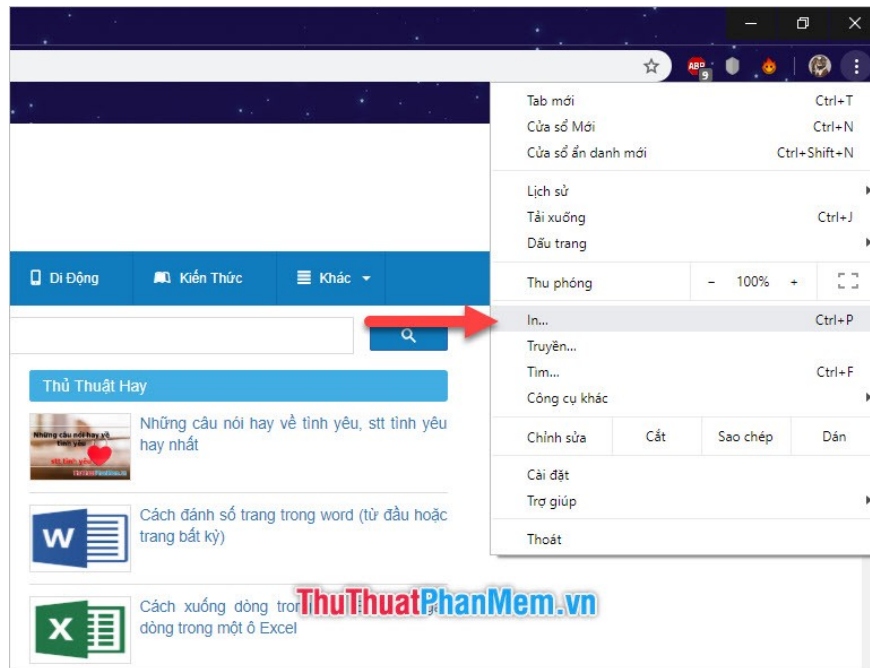

When you're browsing the web and find an important piece of news that you want to print right away for reference or archiving, for some of you who don't know your browser's print functionality will most likely be blacked out. set a webpage with Ctrl A and then copy it to Word to print. But this can create a bit of misrepresentation in the same position format if the Word file does not read all of the web format settings. Moreover, you do not need to spend time on such steps, let TipsMake.com talk about how to print web page content right on the web browser interface.

## 1. Print web page content on paper

### 1.1. Print content on Chrome web browser

To print the current content in Chrome web browser, click on **Customize and control Google Chrome** (the icon with three dots in the right corner under the **X Close** icon ).

The custom list will have the **Print** (or Print) line. You click on it to turn on the print function.

The display of the print function will appear on the web page. You will get a preview of what you will print right there.

The print settings are in the left column, you set up the printer, the pages printed and the number of prints and some other settings. Then click **Print** to print the web page content.

(Ctrl+Shift+P) 

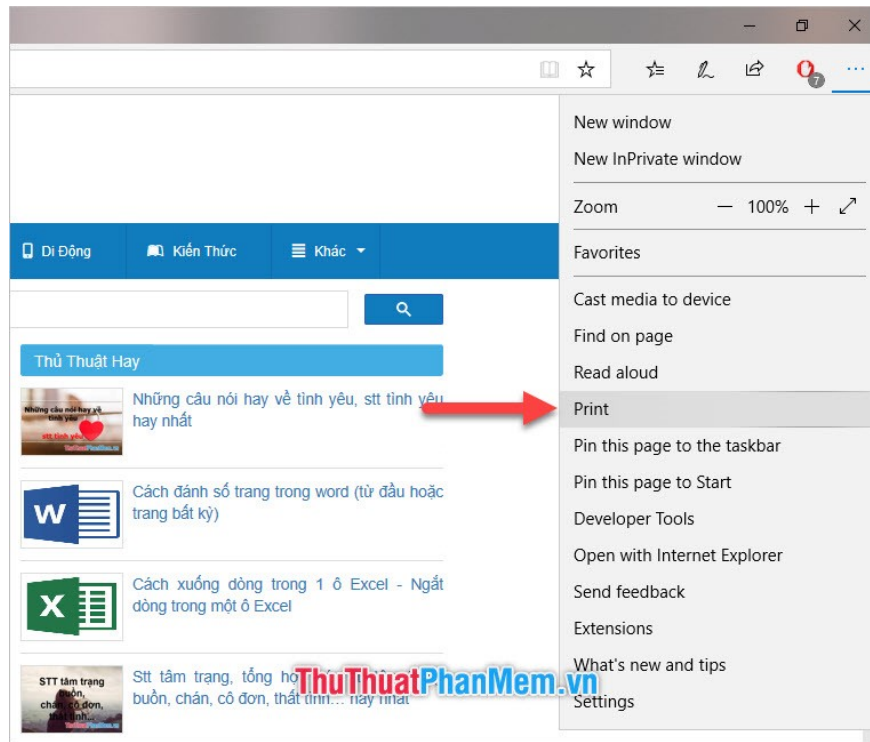

Chrome also has a function

## 1.2. Print content on Microsoft Edge web browser

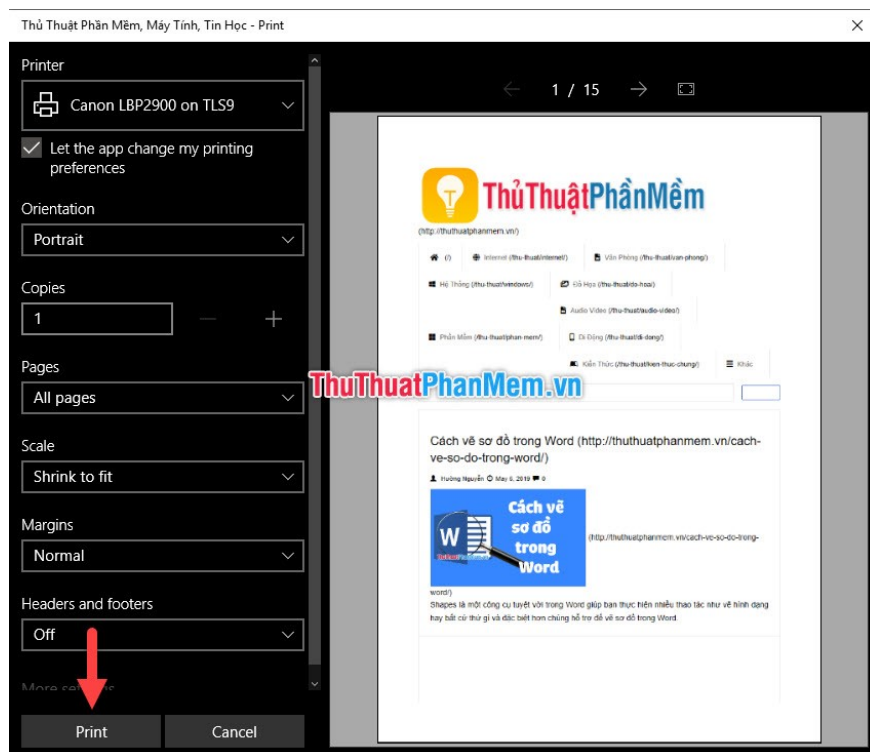

To print content on the **Microsoft Edge** web browser , click the **Settings and More** icon with three horizontal dots in the right corner of the browsing interface. Or use the **Alt X** key combination .

In the opened list of settings, select **Print** to enable printing on **Microsoft Edge** web browser .

The **Microsoft Edge** print interface is black as shown below. You can see a preview image of the printout at **Preview** on the right.

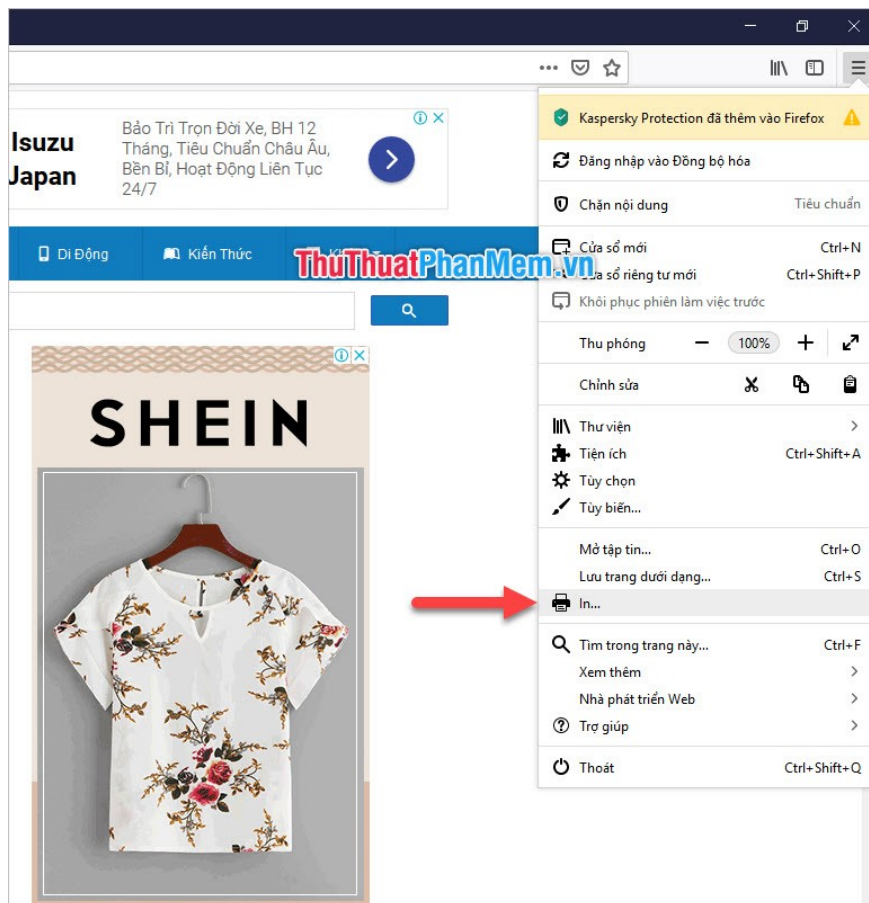

After you have customized the different settings for your print, click **Print** to print it out.

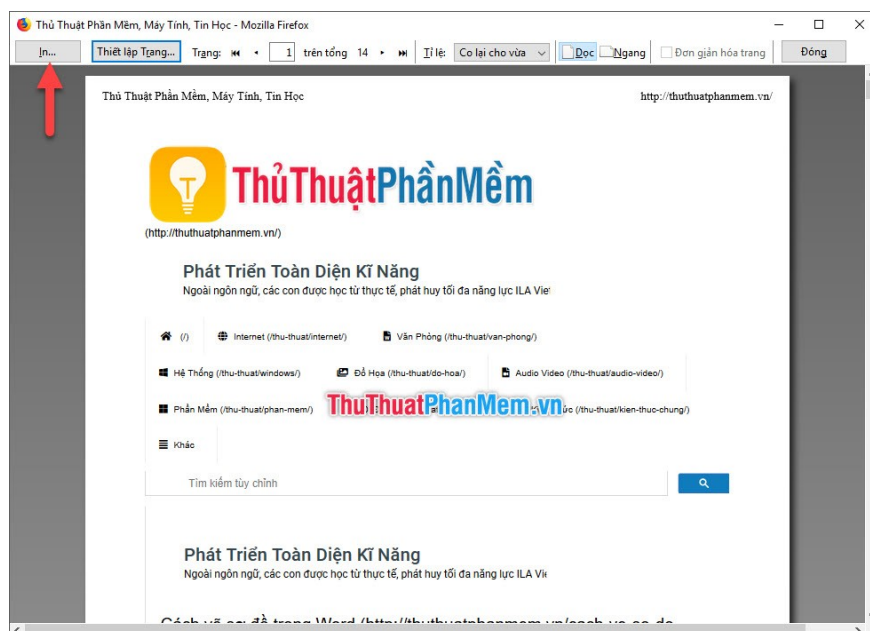

### 1.3. Print content on Firefox web browser

To print content on **Firefox** web browser , click the **Menu** icon with three dashes in the right corner of the web browser interface.

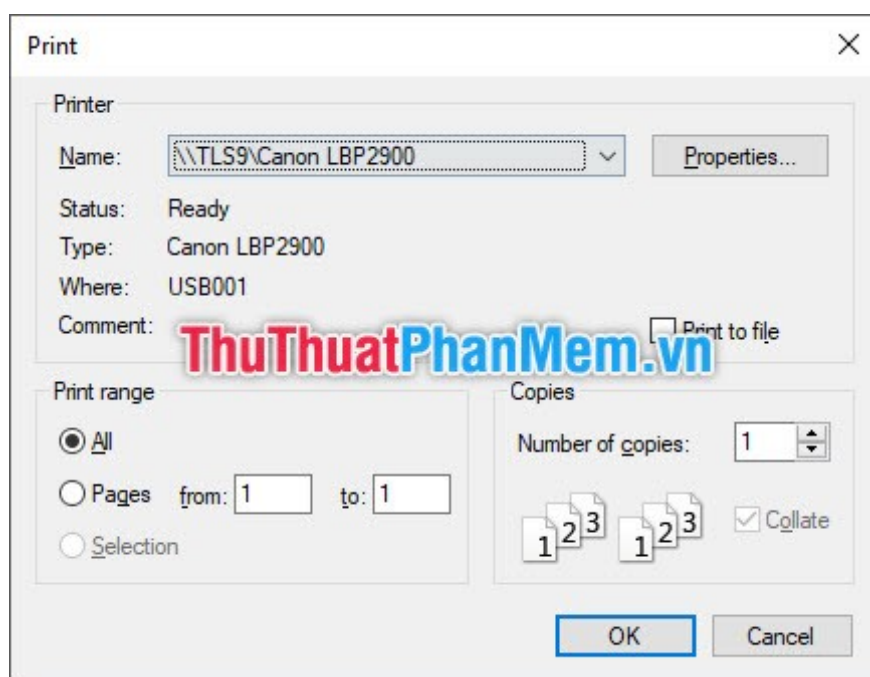

Then select the **Print** function in this **Menu** .

The Firefox Print Function dialog box will appear in the background of the web browser interface, you can preview your printout in this dialog box and set some settings such as the print scale and the width of the page horizontally. paper size. Then you click **Print** to open the **Print** panel .

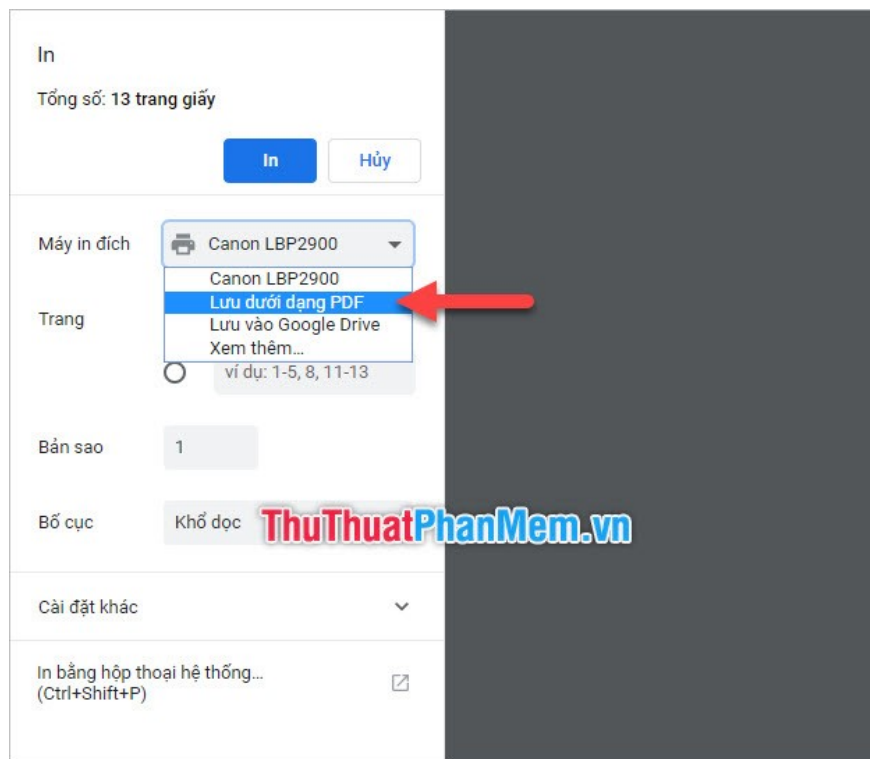

**Print** function table appears on the screen. You customize the necessary settings when printing and then click **OK** to print the web content on paper.

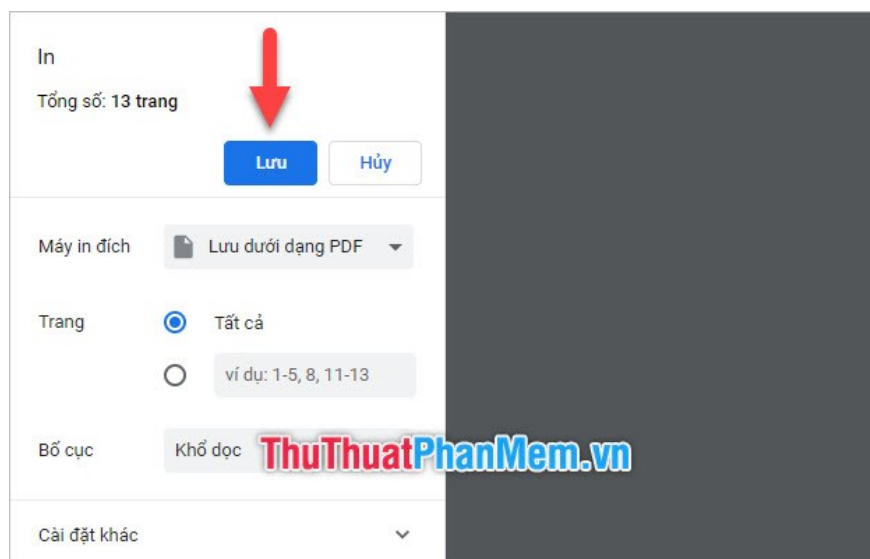

## 2. Print web page content to PDF file

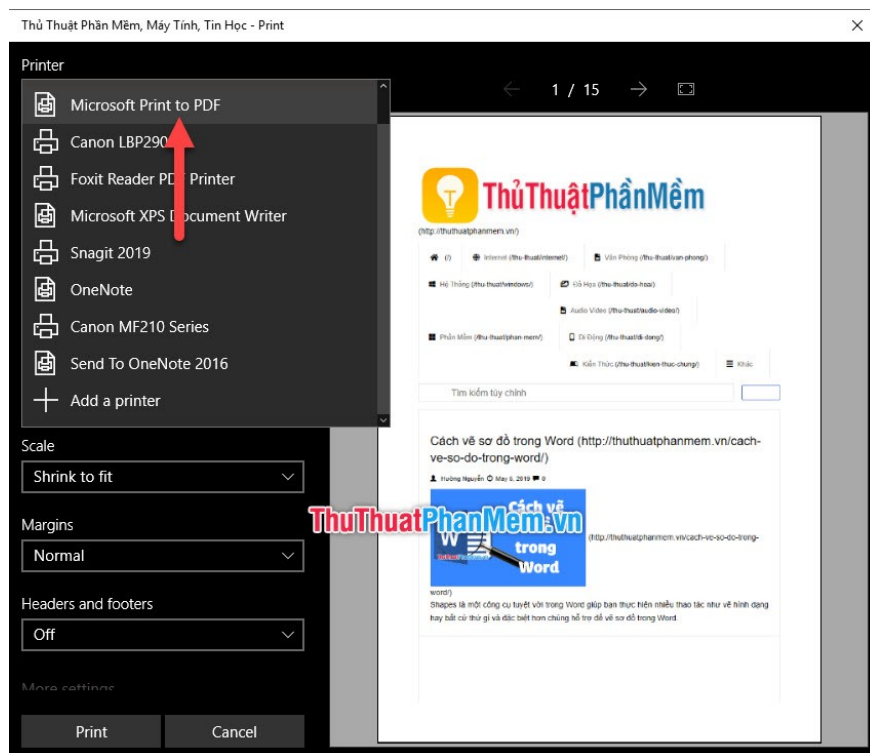

To print web content to PDF files, you need to adjust the target printer to **Save as PDF** (Vietnamese with Chrome).

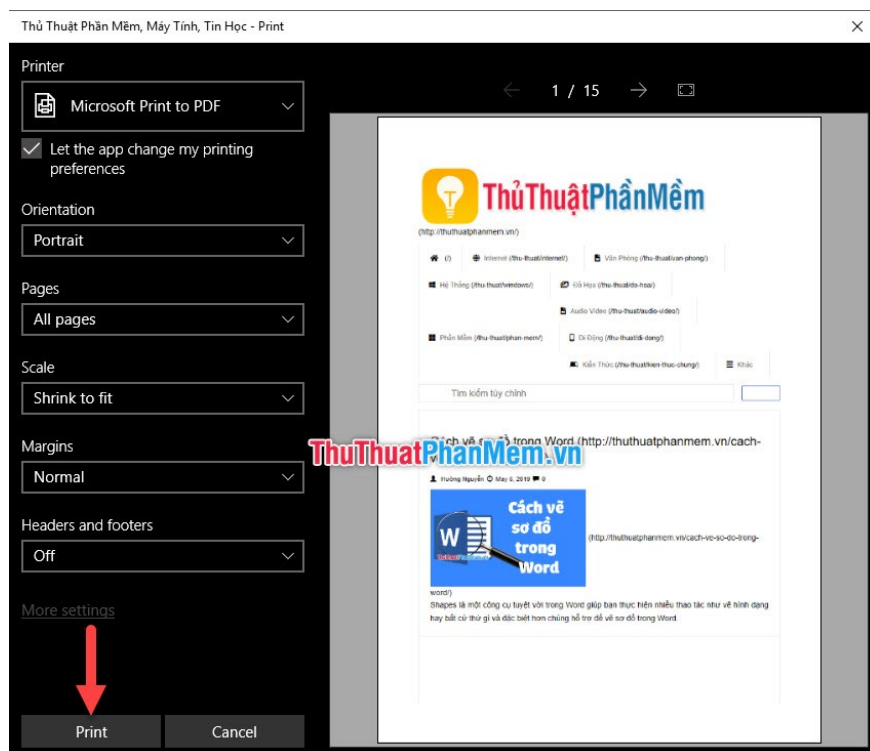

Then click **Save** and save the PDF file containing the webpage content on paper.

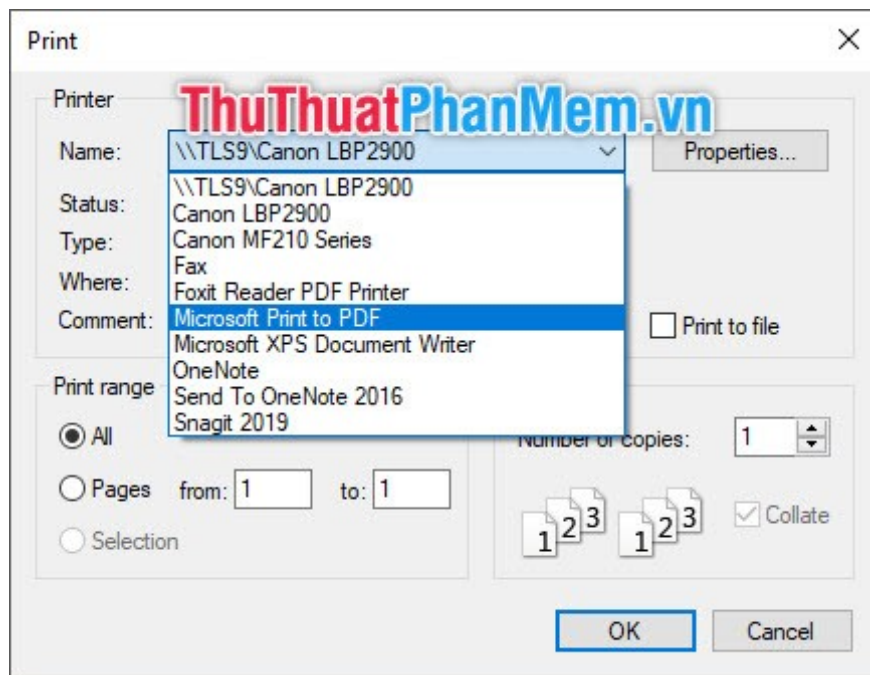

So with Microsoft Edge, you change the printer to **Microsoft Print to PDF** . This allows you to store website data as a PDF file.

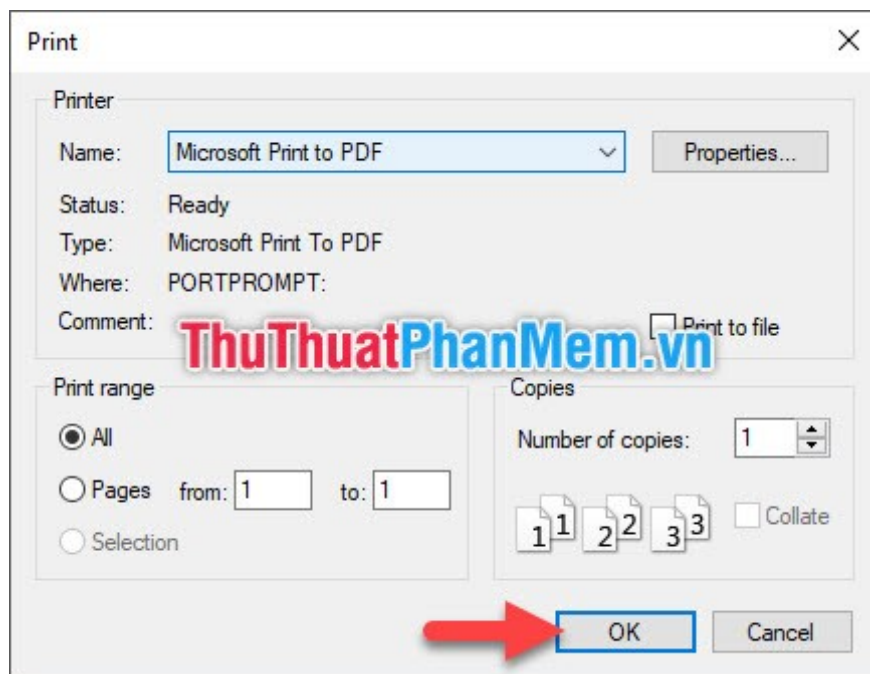

Click **Print** to export the PDF.

And with Firefox, you also change the printer to **Microsoft Print to PDF**.

Then click **OK** so the webpage content in Firefox is converted to PDF.
