

# How to project iPhone screen on computer

How to project iPhone screen on computer. Projecting the iPhone screen on your computer makes it possible to experience the iPhone on a larger screen or display content for others to see.

## 1. Project the iPhone screen onto the computer with 3uTool

**Step 1:** You need to download and install **3uTools** at <http://www.3u.com/>

After installation, connect your iPhone to the computer with a USB cable and open the **3uTools** application . Next, click on **ToolBox (1)** => **Realtime Screen (2)** .

**Step 2:** After that, the screen on the iPhone will automatically transfer to the computer screen. On the slideshow **Realtime Screen** of 3uTools there are tools to support us such as:

- **Save to Local:** Save screenshot to computer.
- **Copy to Clipboard:** Save screenshots to the Clipboard, so you can paste pictures into Word, folders . quickly with Ctrl + V.
- **Open Screenshot Directory:** Open the folder containing the screenshot.
- **Full Screen:** Turn on full screen mode of 3uTools application.

- **Landscape Mode:** Rotates the screen horizontally.

## 2. Use the LonelyScreen application

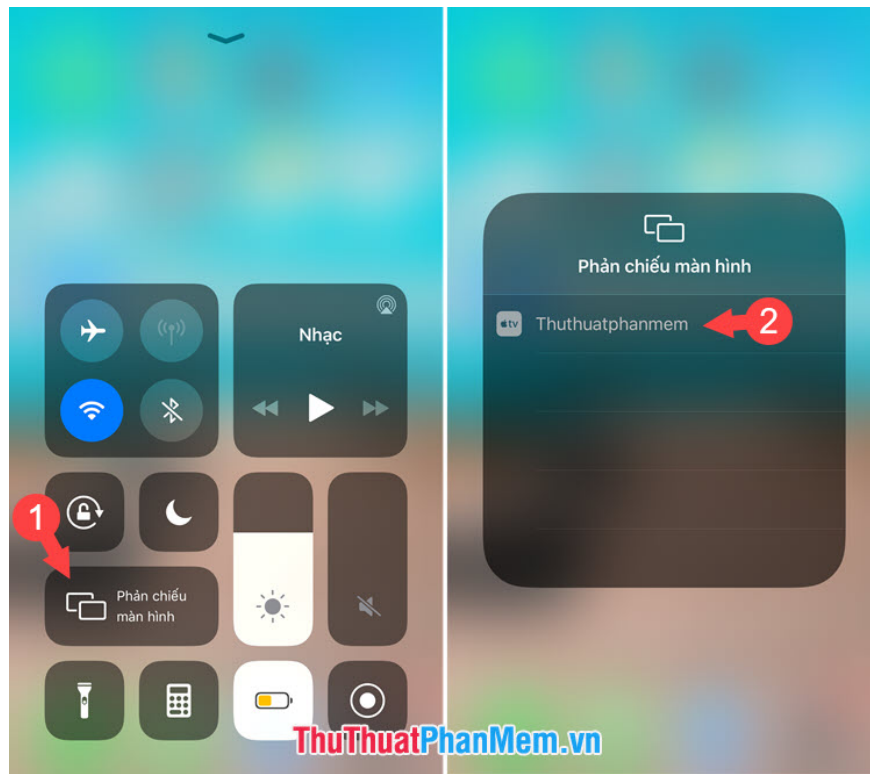

**Note:** Before using this method, both the iPhone and the computer must connect to the same network to be able to identify the device.

**Step 1:** Download and install the software at <https://as.lonelyscreen.com/download.html>

Next, click on **Change Server Name (1)** to set a new name => **Save (2)** to save.

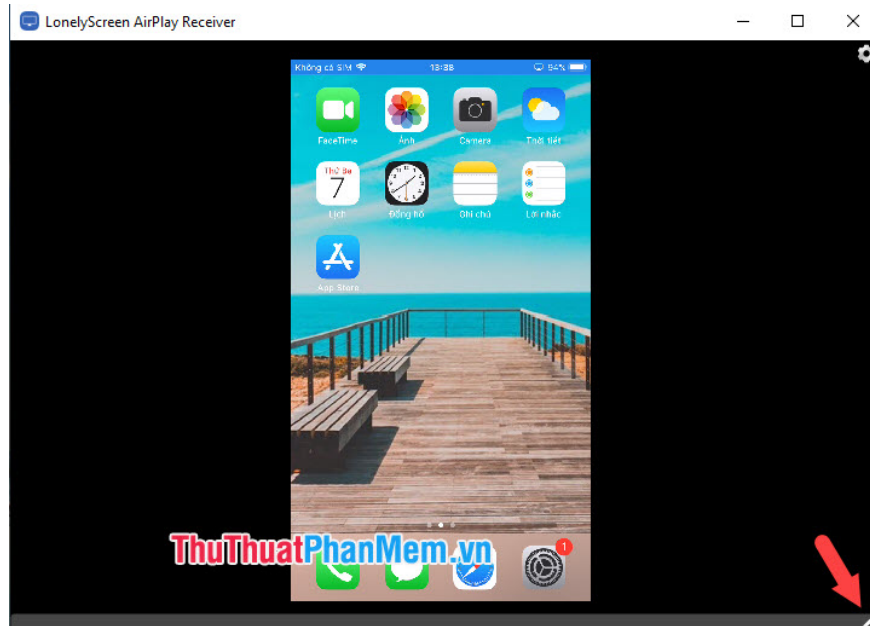

**Step 2:** You open your iPhone and swipe up from the bottom of the screen to open Control Center. Next, select **Screen mirroring (1)** => select **Server name (2)** .

The image on the iPhone will then be instantly reflected.

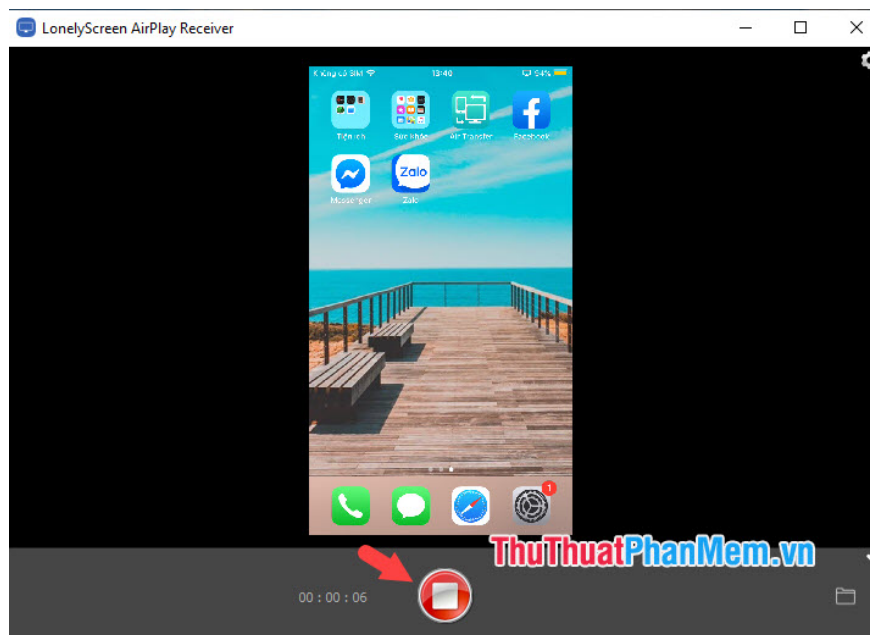

**Step 3:** To record a screenshot, click the arrow in the bottom right corner.

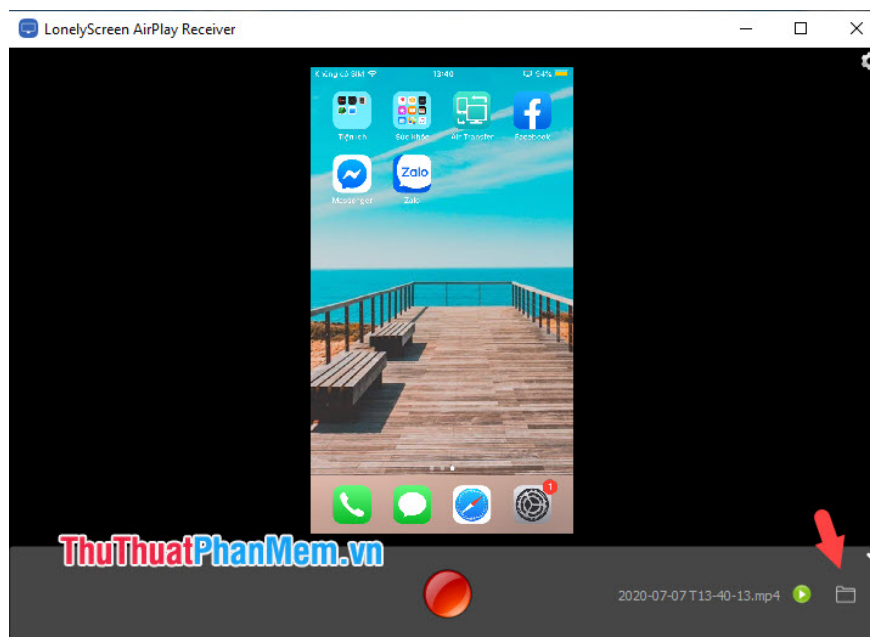

Next, click on the red circle to proceed to video screen.

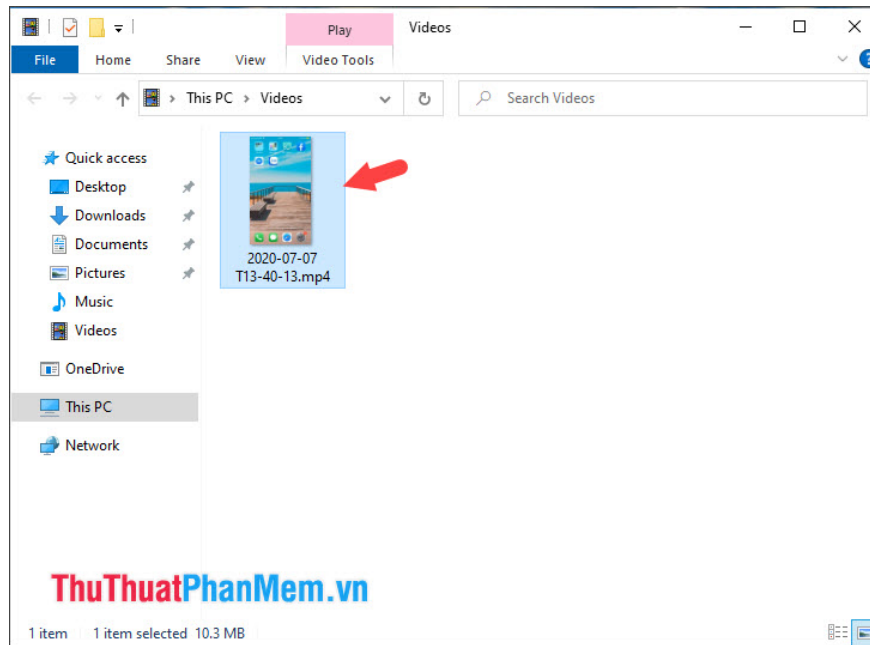

Click that icon again to stop recording.

**Step 4:** To see where the video is from the screen, click the **Folder** icon as shown below.

You can then watch the video and edit it on your computer easily.

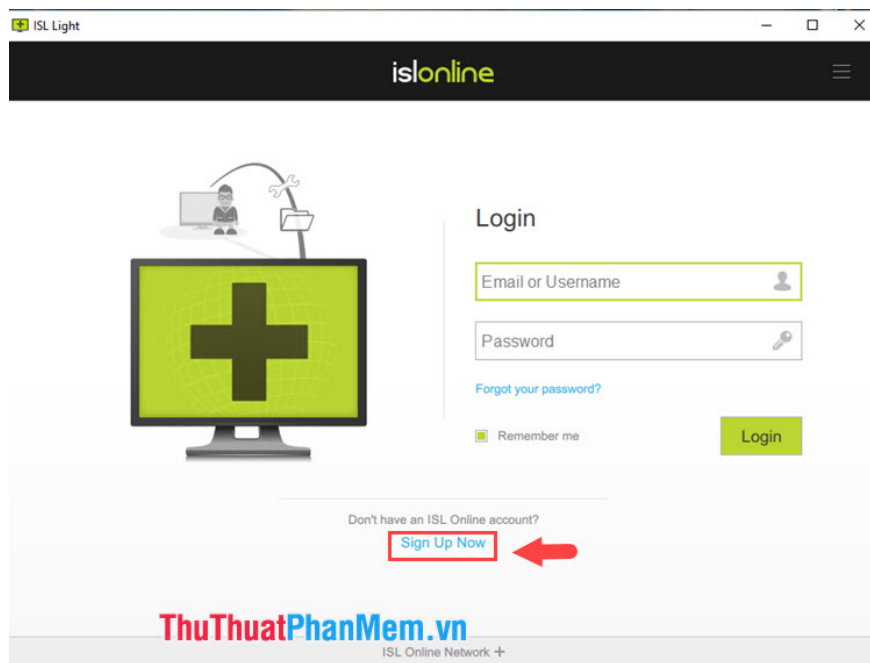

### 3. Use ISL Light

**Step 1:** Download and install the software at <https://www.islonline.com/vn/en/downloads/download-isl-light.htm>

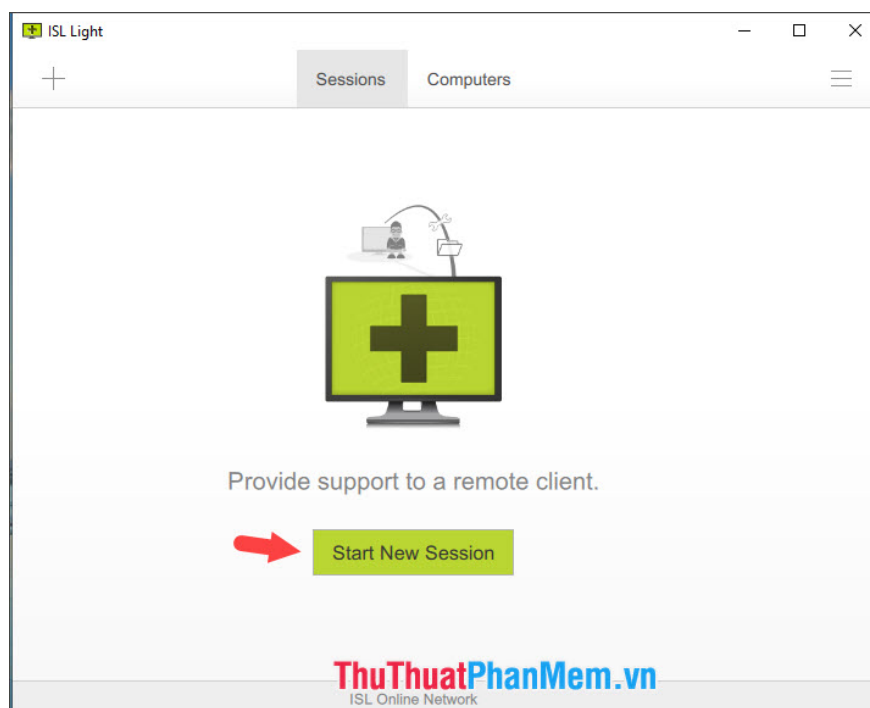

Next, click on **Install** to install on the computer.

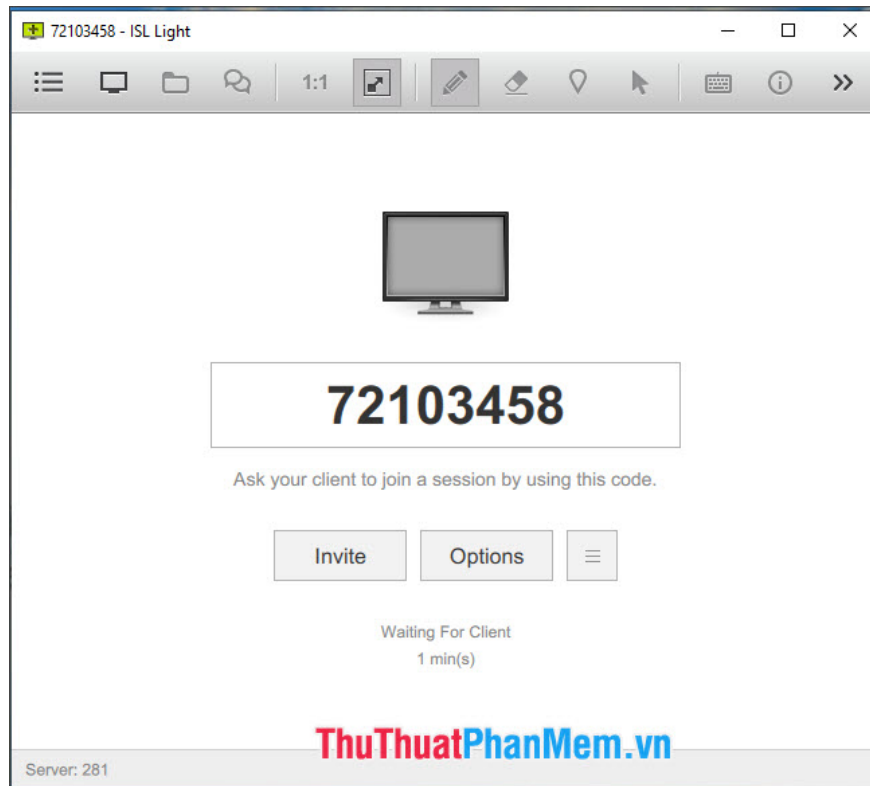

**Step 2:** Click **Sign Up Now** to register a quick account and use the software.

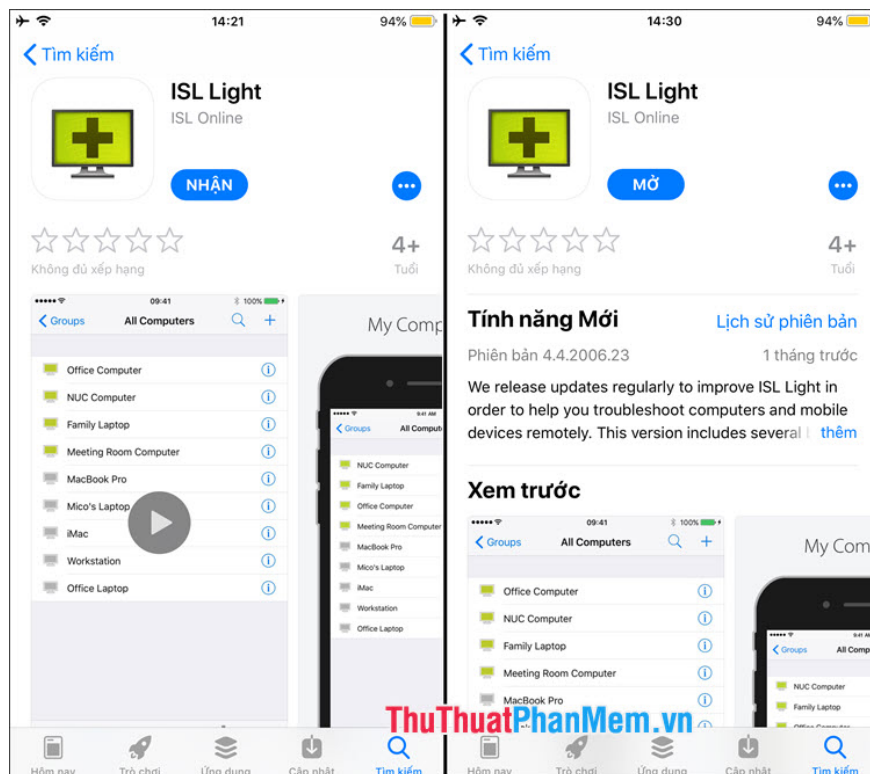

**Step 3: Click on Start New Session .**

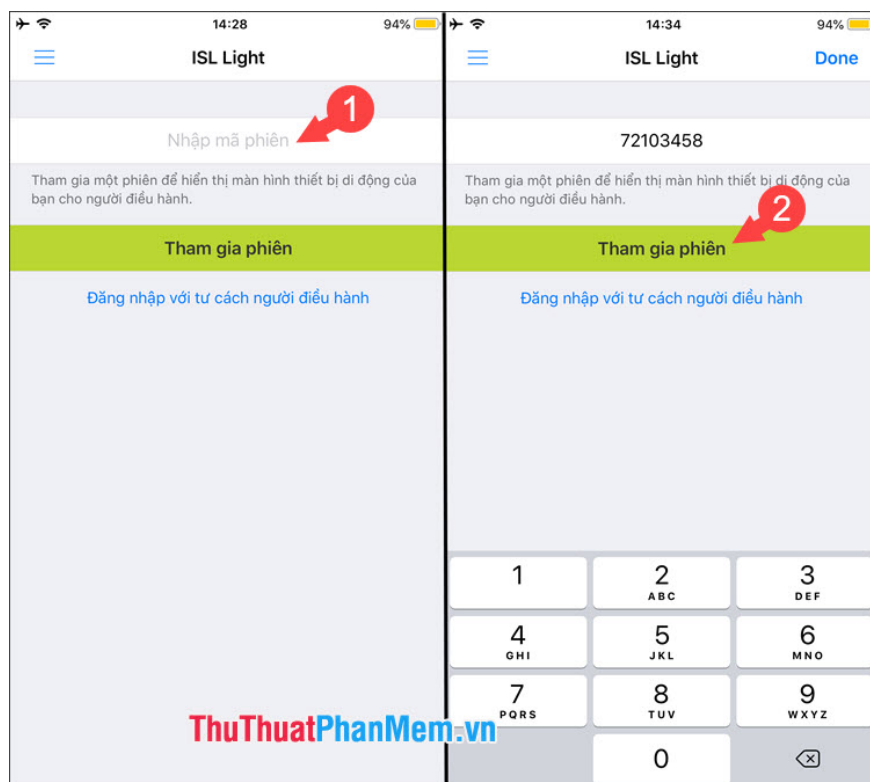

You will then receive a sequence of numbers as shown below. Please save this code to enter on the iPhone.

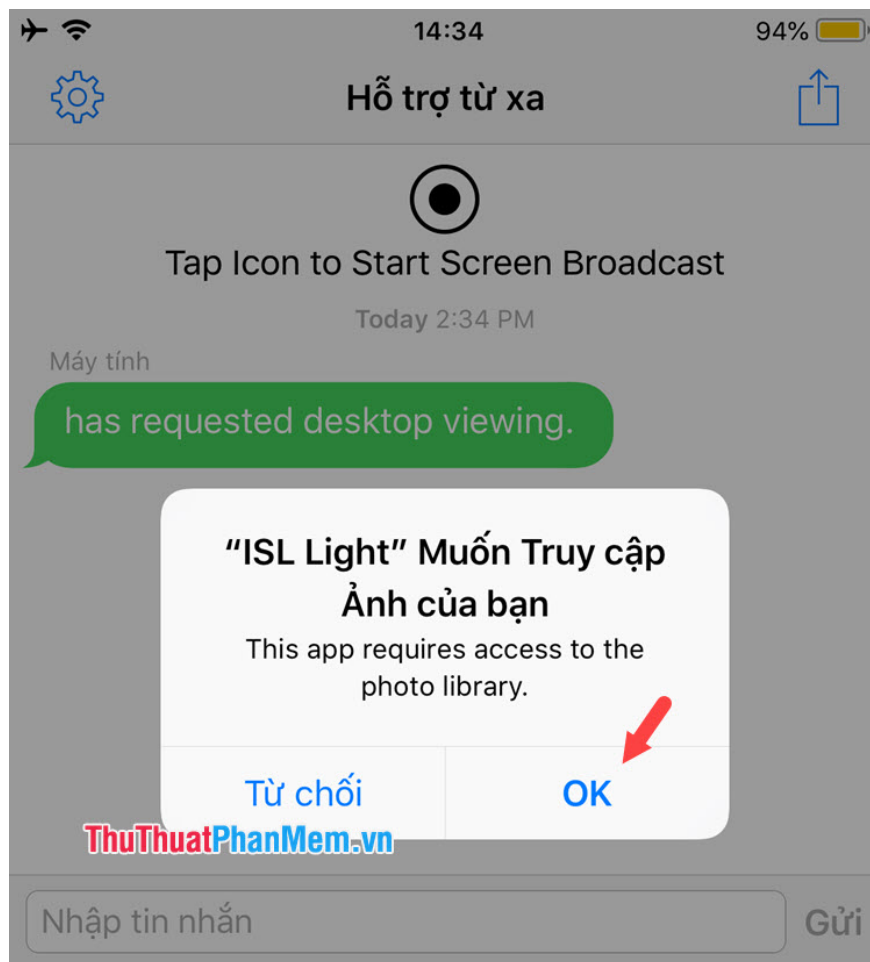

**Step 4:** Go back to your iPhone and download the **ISL Light** app at the link <https://apps.apple.com/us/app/isl-light/id427579815>

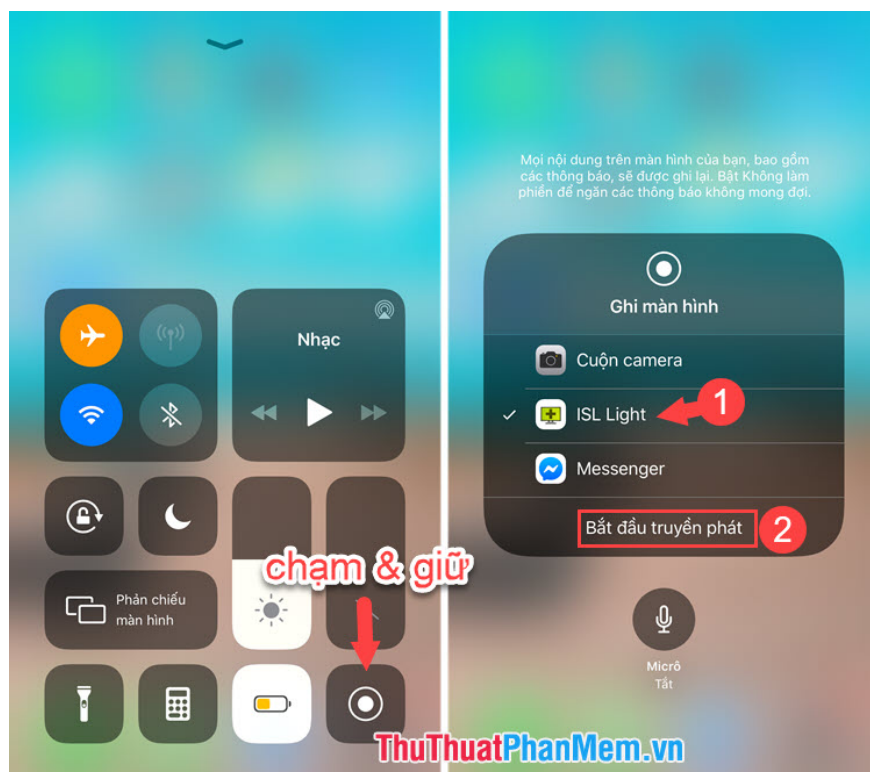

**Step 5:** Enter the session code (1) on the computer => **Join session (2)** .

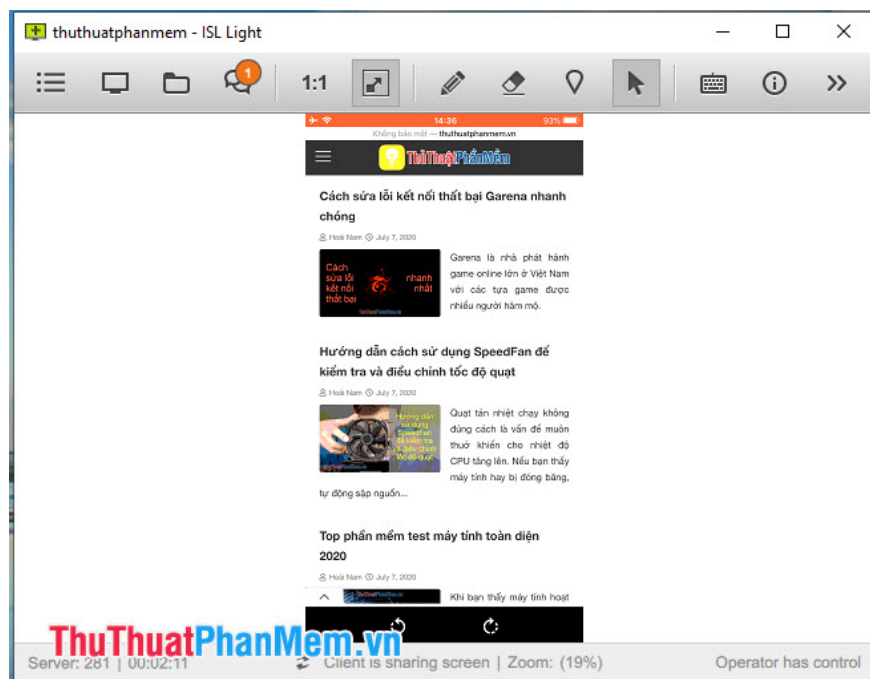

If a message like the one below appears then select **OK** to grant access.

**Step 6:** You swipe up from the bottom of the screen to open **the Control Center** . Next, **press and hold** the **Screen Recorder** icon to open the submenu. Then, choose **ISL Light (1) => Start broadcasting (2)** .

**Step 7:** Go back to the computer and you will see the video screen will be shown on the computer.

With projection of the iPhone screen on the computer will help you experience content on the iPhone more comfortable and easier to observe. Good luck!
