

How to put the icon between the Taskbar and make the Taskbar transparent on Windows 10

The default characteristics of the Taskbar in Windows 10 are probably still enough to make the majority of users happy. However, did you know that you can completely make the Taskbar look much more beautiful with colors from translucent to transparent with application icons in the middle?

The default characteristics of the Taskbar in Windows 10 are probably still enough to make the majority of users happy. However, did you know that you can completely transform the Taskbar to be much more beautiful with colors from translucent to transparent with application icons in the middle? To do that trick, please refer to the following article.

Prepare

In Windows 10 settings, there are options that allow you to dim the Taskbar. However, the blur achieved is very low, hard to recognize. In the same way, the ability to change the icon position of running applications is not automatic - understandably, if you want to put them in the middle of the Taskbar, you can only fix them in one location. which you feel is in the middle, and when there are new icons appear, the result is the row of icons will be skewed, no longer in the middle of the Taskbar. You will easily see that in the example below:

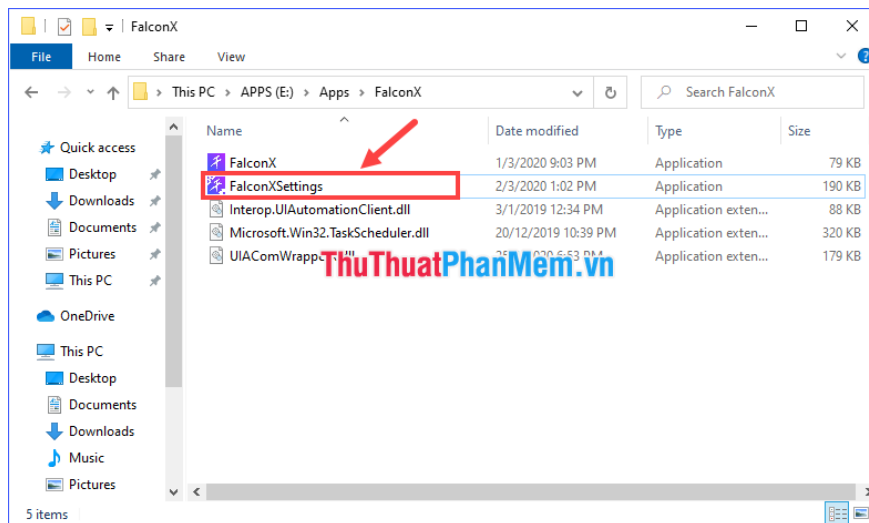

Therefore, in this tutorial I do not use the setup capabilities of Windows 10, but instead will use a small application called *FalconX* .

To download, you do the following:

- Access to the link: Download *FalconX* .
- Then click on **Download ZIP** .

When the download is complete, unzip the ZIP file and run *FalconXSettings.exe* .

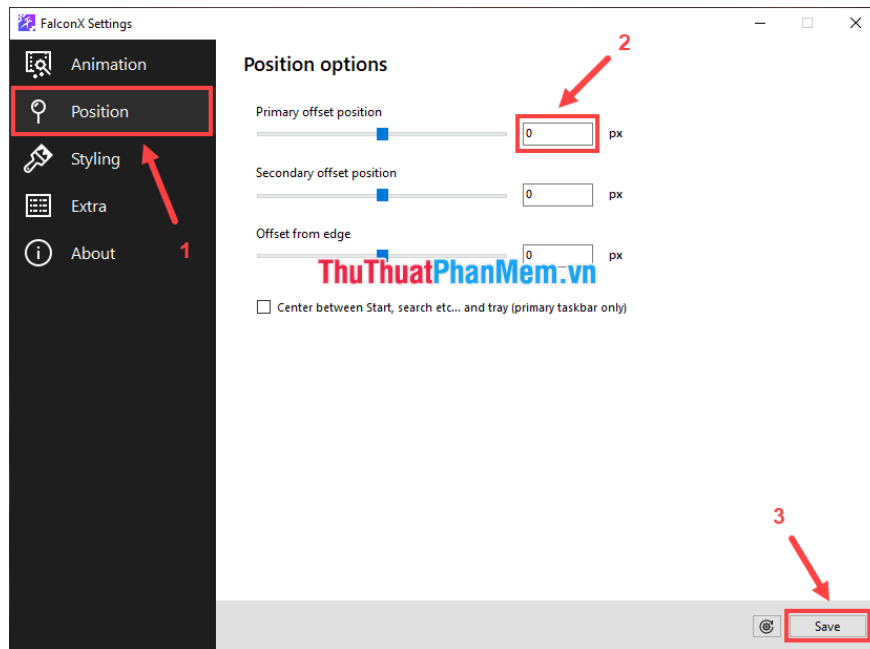

Put the application icon in the middle of the Taskbar

In the *FalconX Settings* window , go to **Position** . Here the value of *Primary offset position* is to adjust the position of the icon sequence on the Taskbar. To set this value to 0, the icon sequence will be centered. In

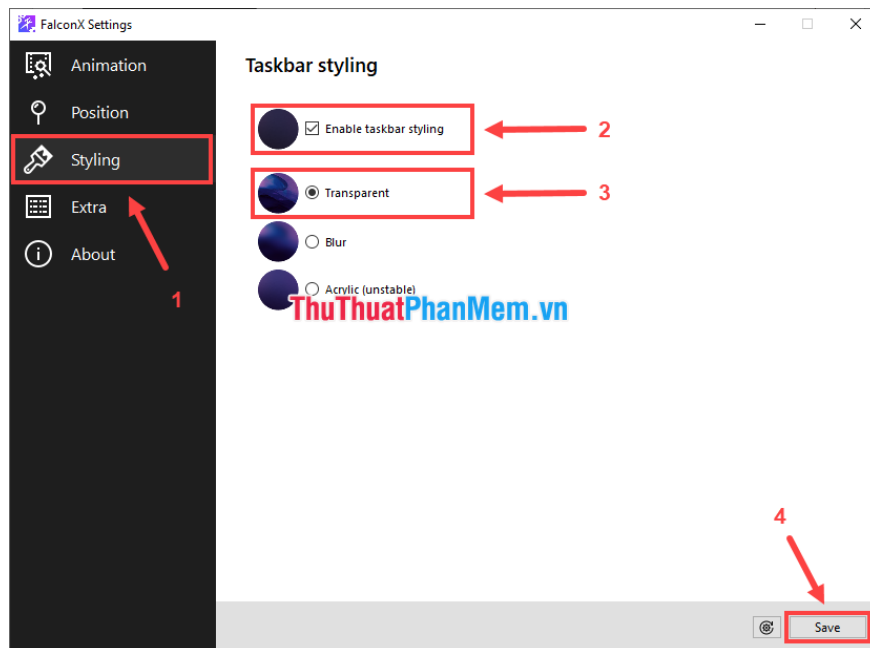

addition, you can move left or right with a distance of your choice (in pixels).

Click **Save** to save the settings.

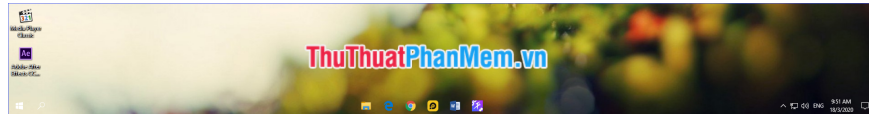

Make transparent the Taskbar

Switch to the **Styling** section . Here you tick the box **Enable taskbar styling** and then select **Transparent** to make the Taskbar completely transparent (or if you want to be a bit dim then choose **Blur**). Click **Save** to save.

And this is the result:

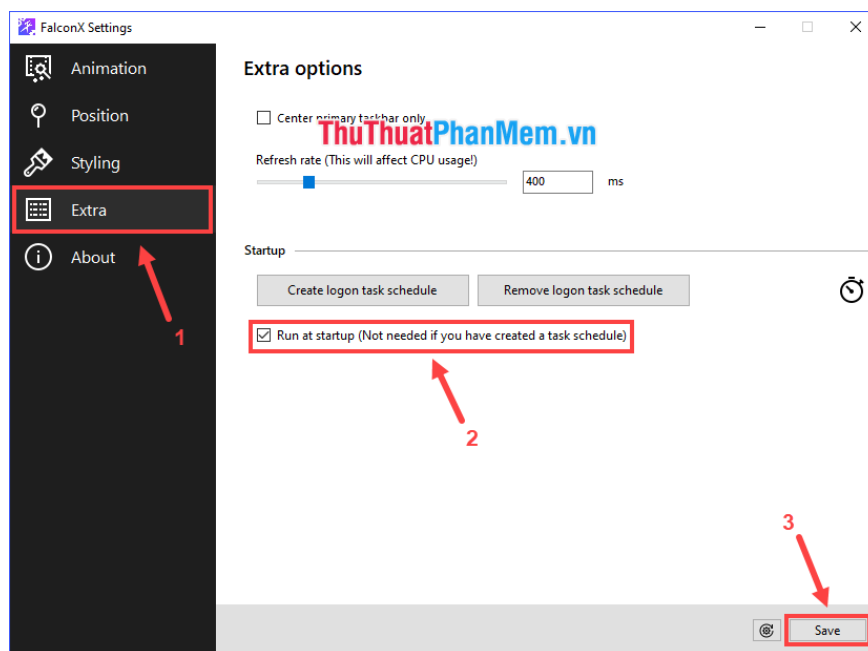

You see, the Taskbar now has a whole new style in a much nicer way!

However, for this effect to "automatically" start with Windows - ie, every time you turn on your computer, the Taskbar remains the same - you need to do a little more manipulation.

Boot the above settings with Windows

Go to the **Extra** section , check the box **Run at startup** and click on **Save** to save. And from now on, *FalconX* will "boot" automatically when you log into Windows.

A great and indispensable application if you are someone who wants to follow new styles! However, for those who only own a low-profile computer, you will probably wonder if such a background application will consume a lot of resources. Let's open *Task Manager* and check it.

Name	Status	70% CPU	49% Memory	0% Disk	0% Network
Background processes (47)					
adb (32 bit)		0%	0.4 MB	0 MB/s	0 Mbps
Adobe Genuine Software Integri...		0%	0.1 MB	0 MB/s	0 Mbps
Adobe Genuine Software Servic...		0%	0.2 MB	0 MB/s	0 Mbps
Antimalware Service Executable		0%	60.5 MB	0 MB/s	0 Mbps
Application Frame Host		0%	0.1 MB	0 MB/s	0 Mbps
COM Surrogate		0%	0.1 MB	0 MB/s	0 Mbps
COM Surrogate		0%	0.8 MB	0 MB/s	0 Mbps
Cortana		0%	0 MB	0 MB/s	0 Mbps
CTF Loader		0%	2.0 MB	0 MB/s	0 Mbps
Device Association Framework ...		0%	3.4 MB	0 MB/s	0 Mbps
FalconX (32 bit)		0%	2.5 MB	0 MB/s	0 Mbps
Host Process for Windows Tasks		0%	2.0 MB	0 MB/s	0 Mbps
Idnews (32 bit)		0%	0.7 MB	0 MB/s	0 Mbps

You can see, *FalconX* only occupies about 2.5 MB of memory and almost does not consume any CPU or Disk resources. So you can be assured then!

Through the above article, I showed you how to put the application icon between the Taskbar and make the Taskbar transparent on Windows 10. Note that only Windows 10 has the ability to customize like that, but The old version will not work. Good luck!
