

How to quickly fix font errors in a Word file after conversion.

When converting Word files from PDFs or downloading them from the internet, many documents encounter font errors due to differences in character encoding or the lack of compatible fonts. Identifying the cause will help you fix the problem more easily.

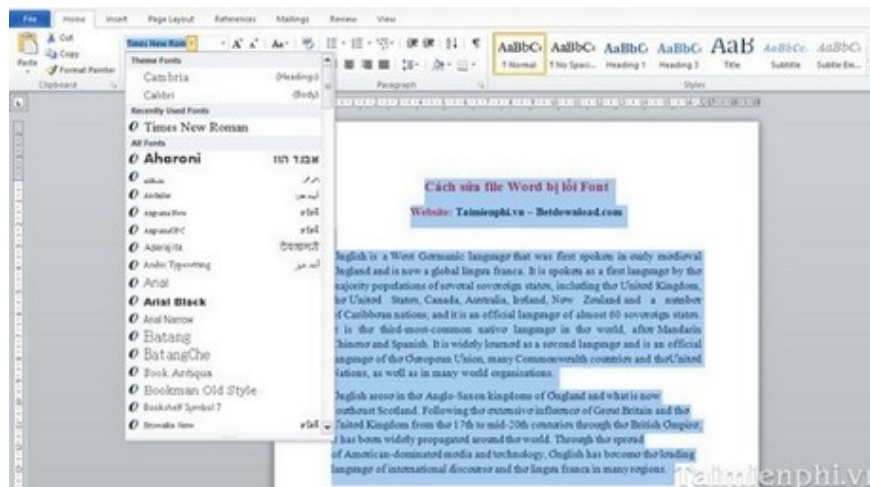

Font errors in Word are often caused by character encoding differences or missing fonts. You can fix these errors by selecting the appropriate font, converting the encoding, or using supporting software.

Reasons why Word files have font errors

- Due to differences in character encoding between documents
- Due to missing fonts on the computer
- Due to errors in the file format conversion process

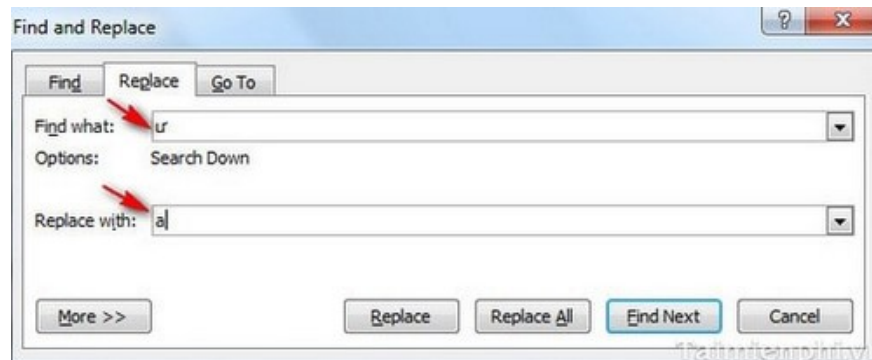

How to fix font errors in a Word file

Step 1 : Open the file you need to edit, press **Ctrl+A** to select all, then go to **Home** and choose the appropriate font.

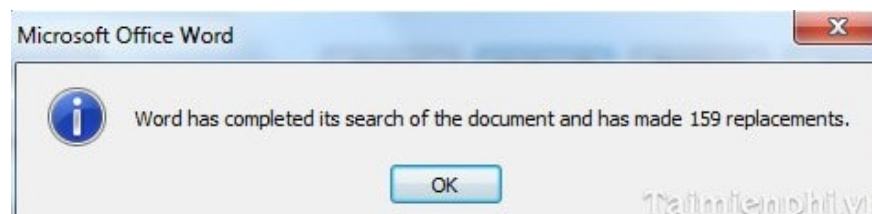

Step 2 : If there are still errors in the text, in this file we can detect that the word ' **tr?il** ' is incorrect and must be replaced with ' **trail** '. However, we can see that only one letter ' ? ' is incorrect and must be replaced with ' **a** '. Therefore, we will only replace the letter ' **a** ' for ' ? ' .

To fix this error, do the following: In Word, press **Ctrl+H** to open a window. In the **Find and Replace window, under Replace, in the Find What field** , type the incorrect word (?). In the **Replace field** , type the word you want to replace (?), which is (a). Then click **Replace All**.

A notification window appears, showing 159 errors. Press **OK** to close the notification.

In the text, we see that the word '?' is replaced by the word 'a'.

Cách sửa file Word bị lỗi Font
