

How to quickly open the camera on Galaxy S8

The shortcut to quickly open the camera on the Galaxy S8 is no longer the Home button as in the S6 or S7.

On the Galaxy S6 and S7, the photography application can be opened quickly by pressing twice on the Home button, no matter where you are (the screen is on / off or opening another application). But to the latest version is Samsung **Galaxy S8** phone , **the design does not have physical Home button anymore** . It will need another way to open the camera app quickly.

By default, Galaxy S8 will open camera application when you press twice on Power button. Users can also choose to **turn off** or continue to use **Keep On** this feature from the first use.

Power button is located on the camera body

If you miss this feature the first time you use it, there is a way to re-enable it in the device settings settings.

Enable quick camera opening on Samsung Galaxy S8

1. Open the **Settings** section .
2. Select **Advanced Features**.
3. Touch the **Quick Launch Camera** item to activate.

Re-enable the camera snap-on feature

Now you can continue to open the snapshot app with the shortcut as mentioned above and ready to take photos at any time.
