

# How to quickly transfer data between iPhone and Android phones

Although the two operating systems are separate and completely different, transferring data between iPhone and Android phone lines is not very difficult. If you do not know how to transfer data between iPhone and Android.

Although the two operating systems are separate and completely different, transferring data between iPhone and Android phone lines is not very difficult. If you do not know how to transfer data between iPhone and Android.

## How to transfer parts

### 1. Transferring contacts

Transferring contacts from iOS to Android is probably the most step-by-step data transfer operation. The process of moving contacts is described as follows: Sync iPhone contacts to iCloud => Export vcf files from iCloud => Import that vcf file to Google Contact => Sync contacts to Android phone with Google account.

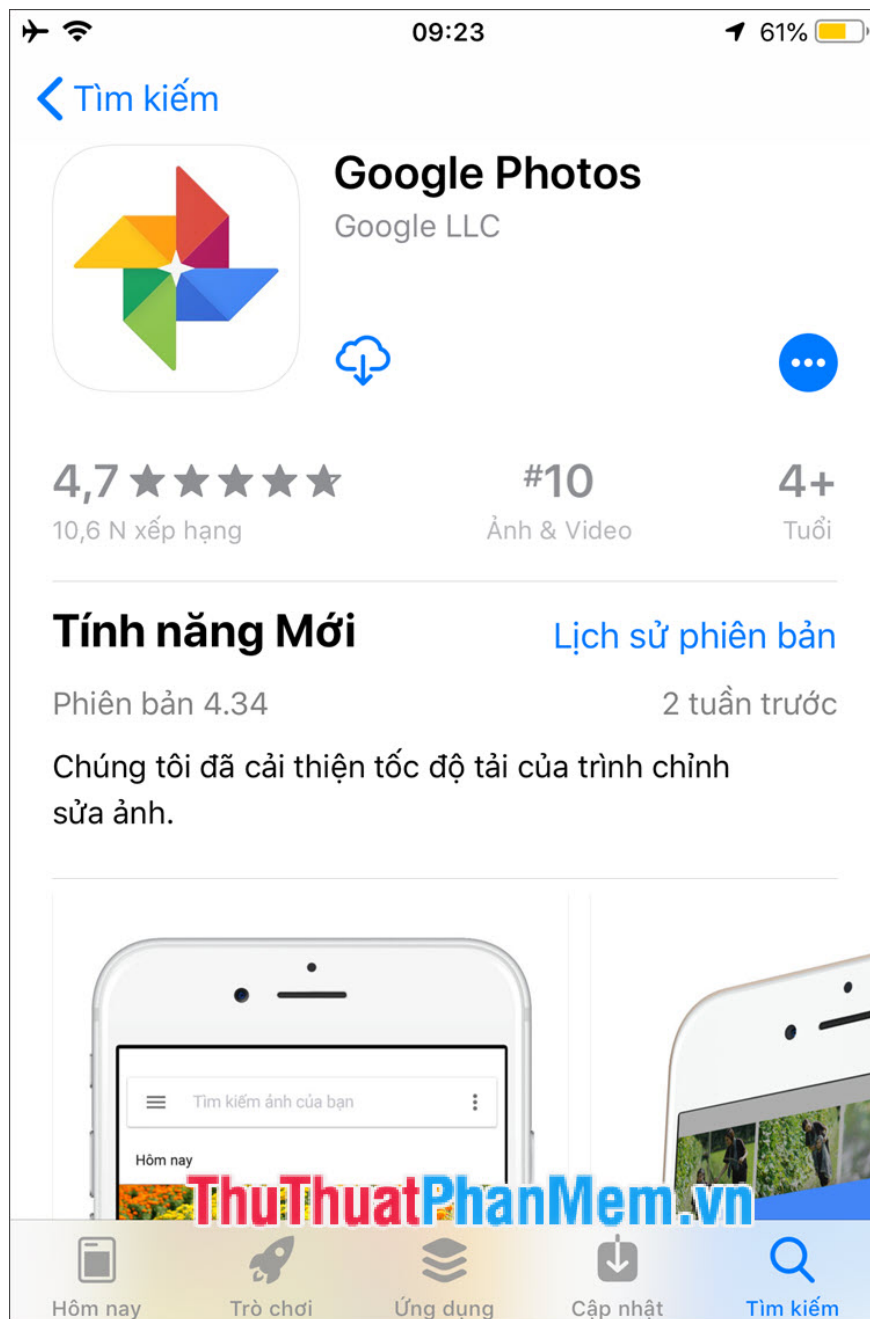

To learn how to import contacts from iPhone to Android, please review the following article: <http://TipsMake.vn/cach-chuyen-danh-ba-tu-iphone-sang-android-nhanh-chuan-xac/>

## 2. Transfer photos

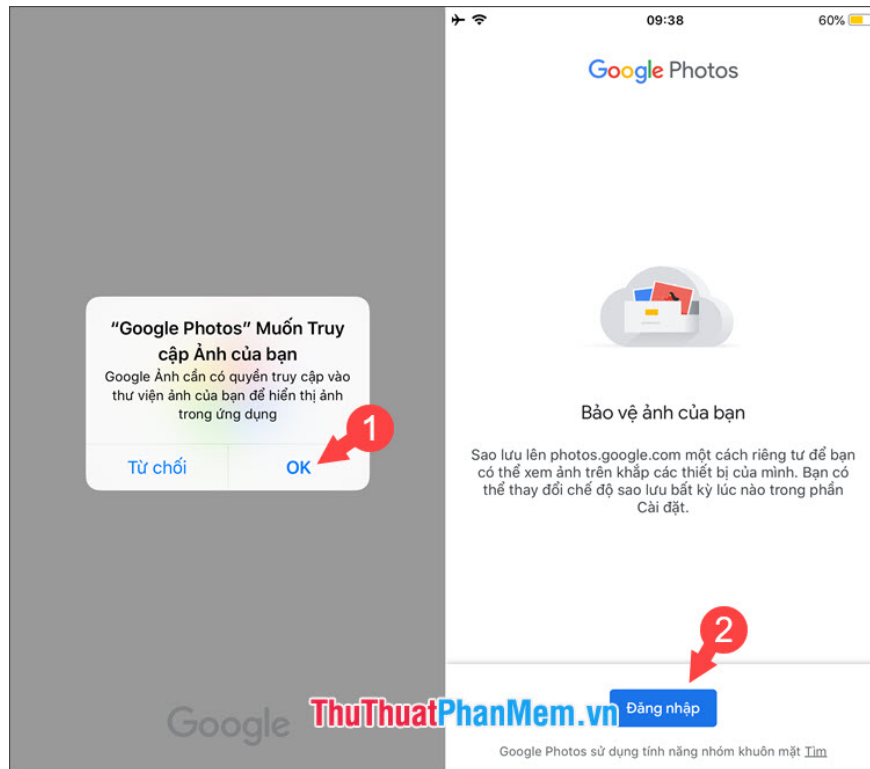

Other than moving contacts between the two operating systems, the image transfer is quite simple and the tool that makes transferring photos easy is Google Photos.

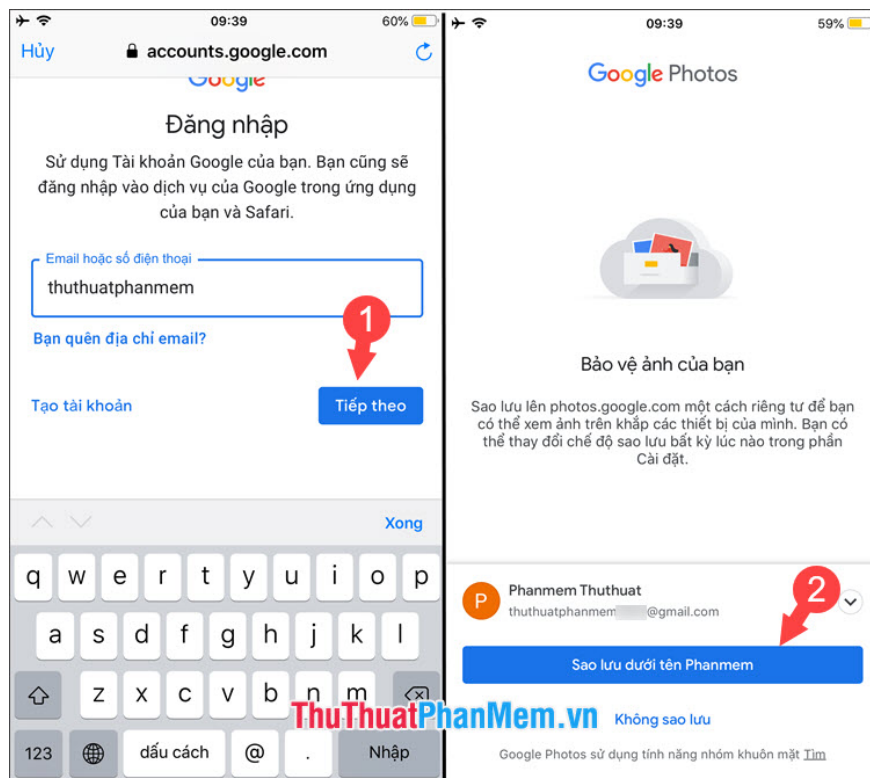

**Step 1:** You download Google Photos for iOS at the following address <https://apps.apple.com/us/app/google-photos/id962194608>

**Step 2:** After installing Google Photos and opening up you will see a notice that Google Photos wants to access your photos, click **OK** (1) to continue and proceed to log in your Google account (2) .

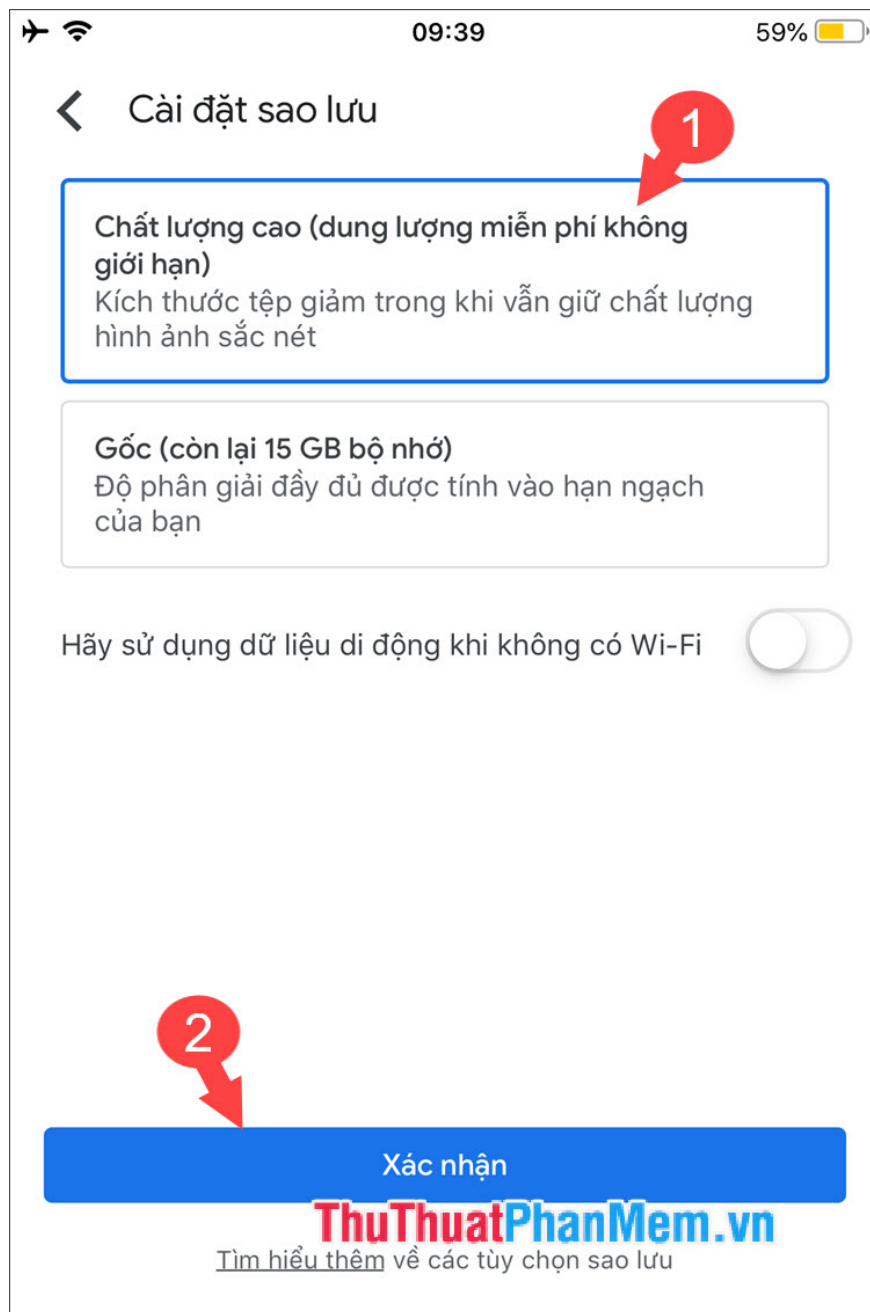

**Step 3:** Log in to your Google Photos account (1) and select **Back up as .** (2) .

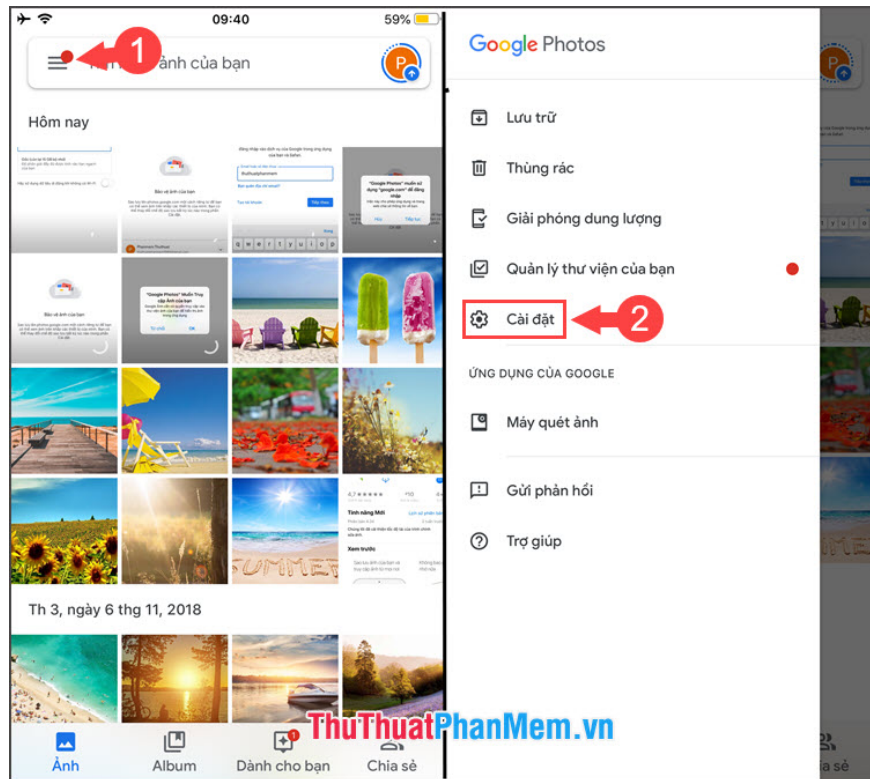

**Step 4:** Google gives us two options: **High Quality** and **Original** . In the High quality section, Google will compress the JPG image standard and the quality may decrease slightly but in return we have unlimited storage of photos when using this option. Choose the option that suits you best, but TipsMake.com encourages readers to

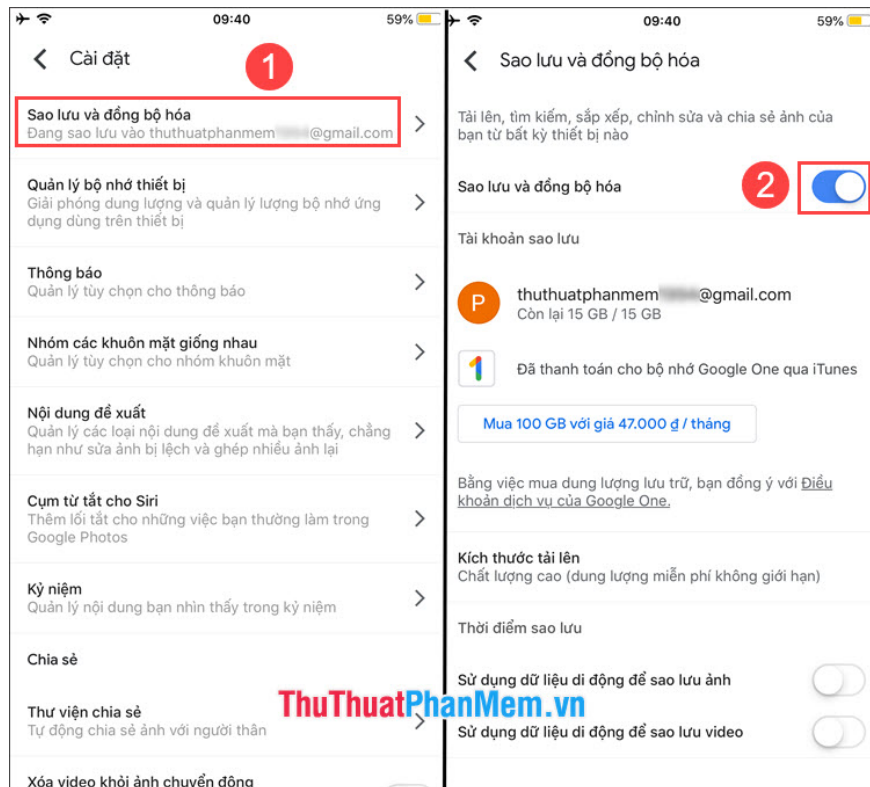

choose **High quality (1)** . After choosing, click **Confirm (2)** to go to the following step.

**Step 5:** In the main interface of Google Photos, you touch the icon three dashes **(1)** => **Settings (2)** .

**Step 6: Select Backup and sync (1) => switch the Backup and sync switch to On (2) .**

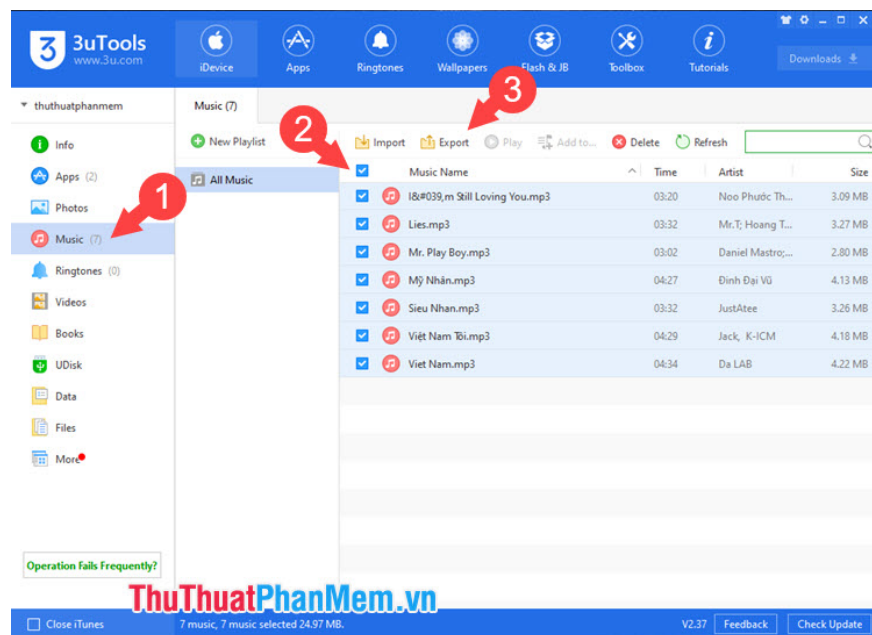

After syncing photos to Google Photos, you only need to sign in to your Google Photos account on your Android device.

### 3. Transfer music

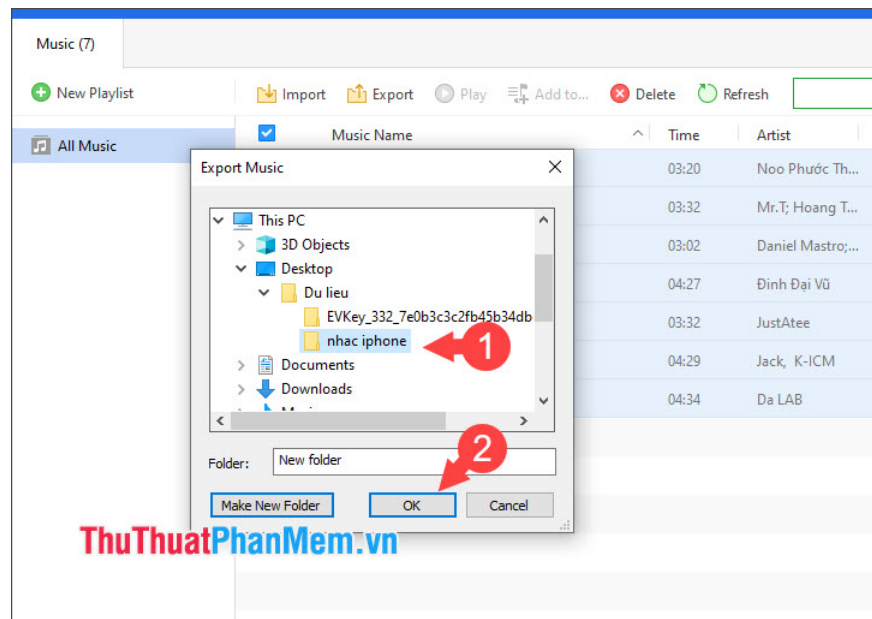

To copy music from iPhone to Android, we must use the computer and the 3uTools software to extract music. If your computer does not have 3uTools then download it in the link <http://www.3u.com/>

**Note:** Your computer must have iTunes installed in order for 3uTools to work.

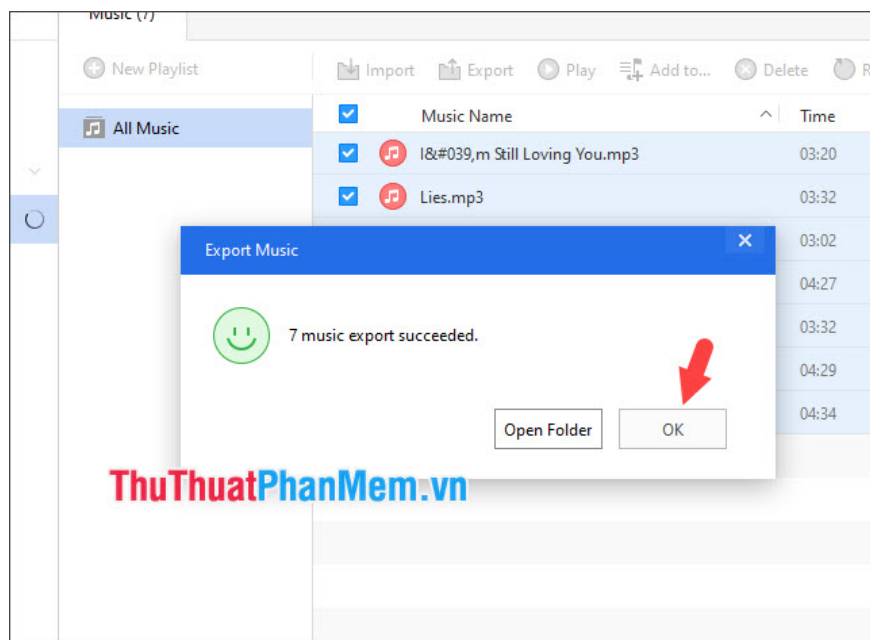

**Step 1:** You open 3uTools and connect your iPhone to the computer. You select the Music card (1) => click the song to copy (2) => **Export** (3) .

**Step 2:** Select the folder to save music (1) and press **OK** (2) to finish.

And after the Succeeded message with the smiley face on it was finished. You copy music to memory card or internal memory of the Android device is successful.

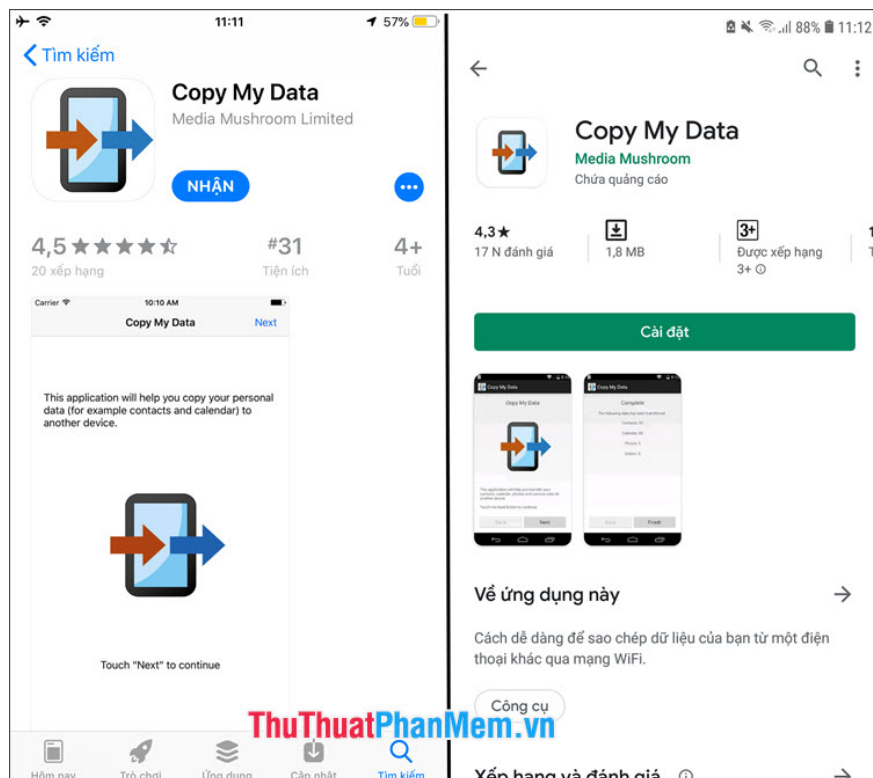

## How to transfer all data quickly between iPhone and Android with the Copy My Data application

With Copy my Data, we can quickly transfer data between two devices like Contacts, photos, videos, calendars more quickly and simply.

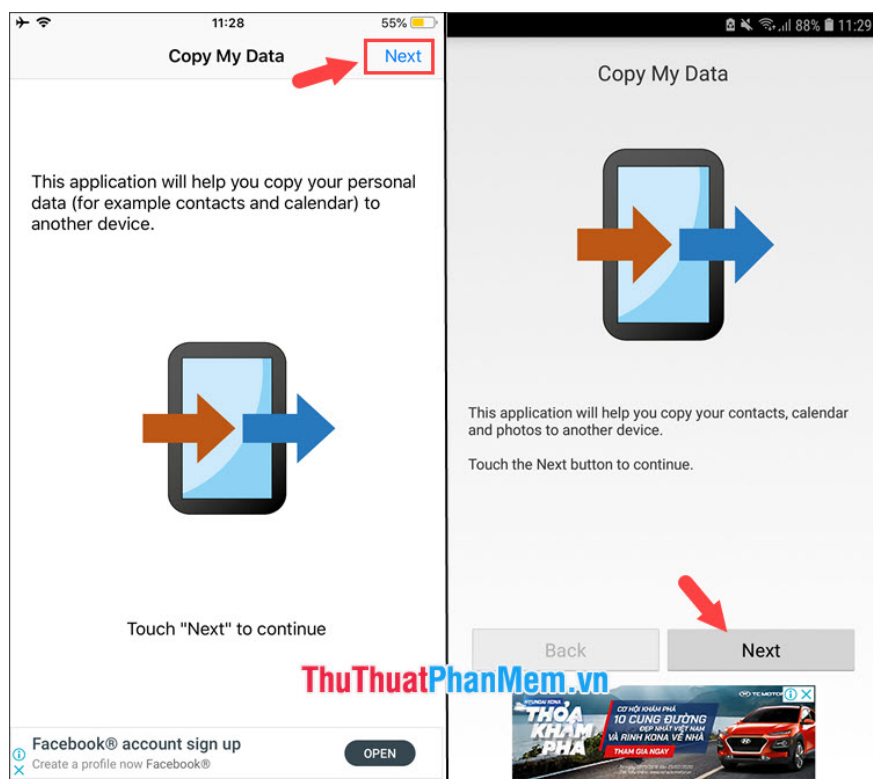

**Step 1:** Download the iOS and Android apps using the link below.

**iOS :** <https://apps.apple.com/en/app/copy-my-data/id870099476?l=en>

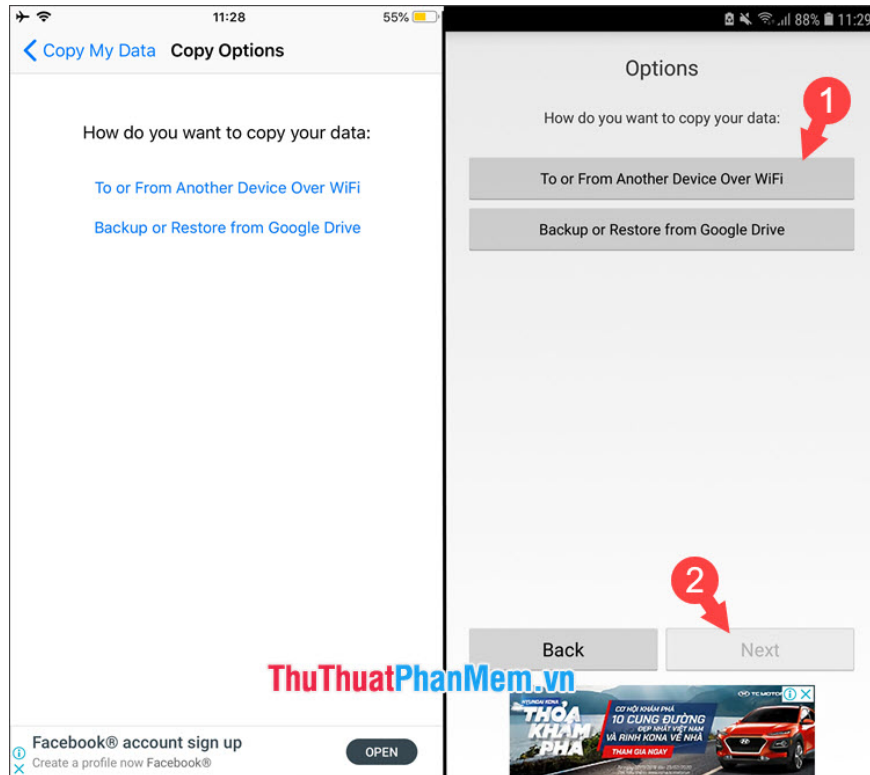

**Android :** <https://play.google.com/store/apps/details?id=com.mediamushroom.copymydata&hl=en>

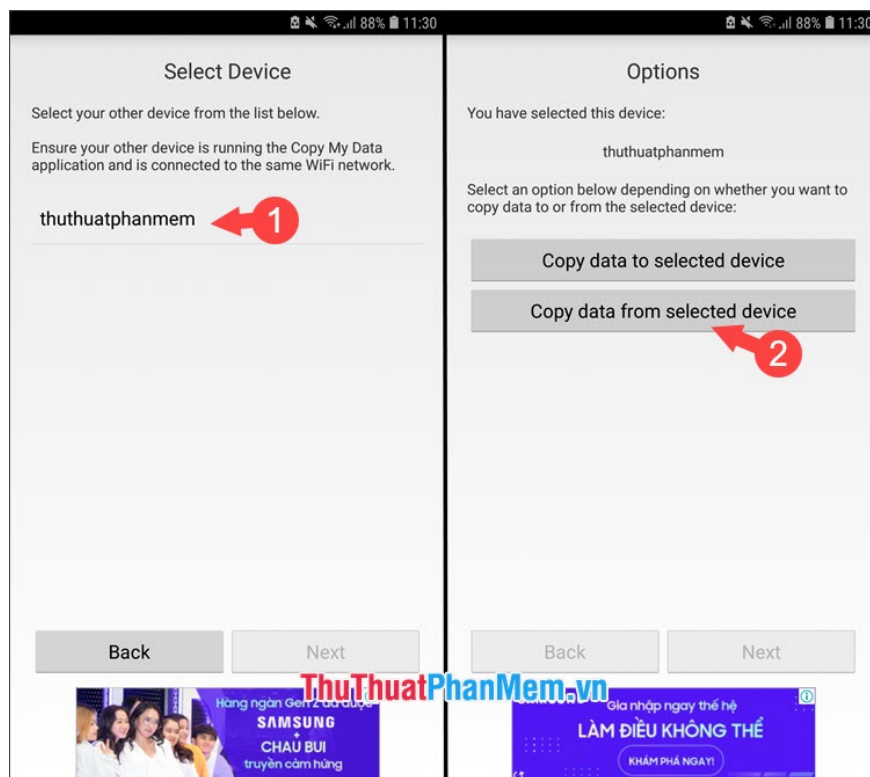

**Step 2:** Open the application and click **Next** on both devices.

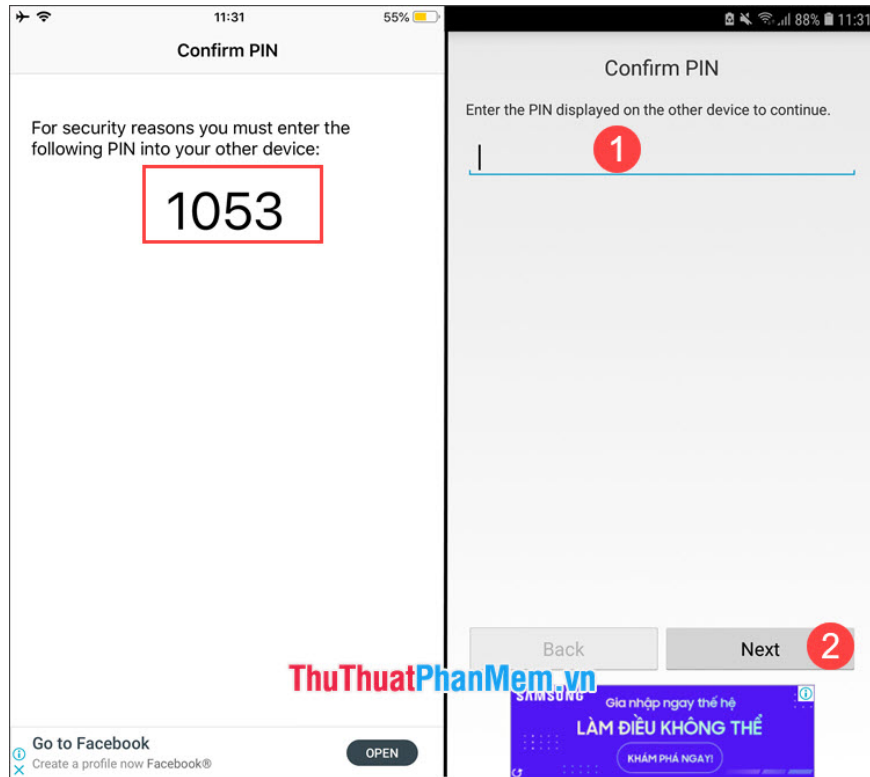

**Step 3:** You want to copy data from any device, you choose that device. I copied the data from iPhone so I will work on Android for convenience. Select **To or From Another Device Over Wifi (1)** on your Android device and press **Next (2)**.

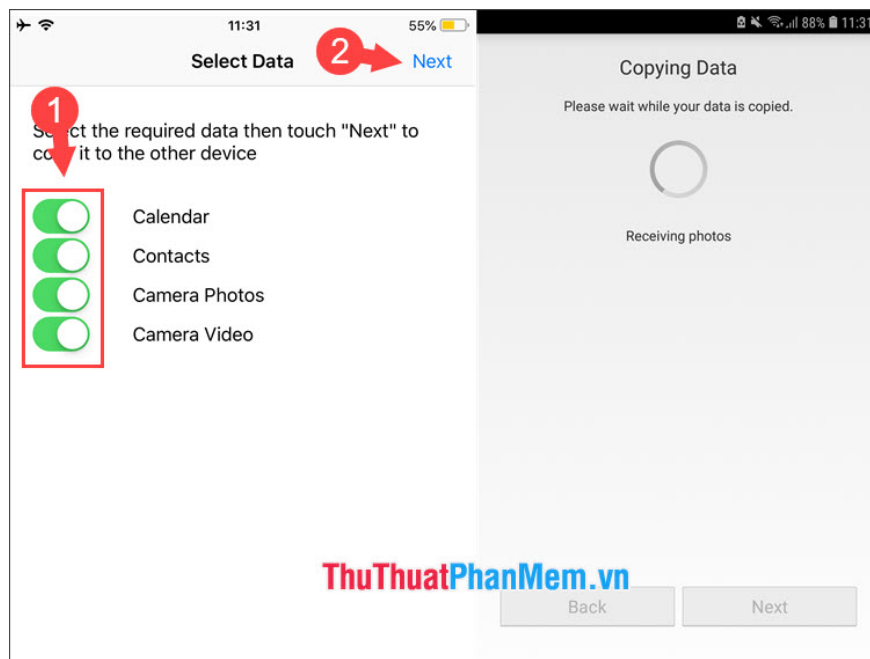

**Step 4:** Select the name of the device to copy data (1) => Copy data from selected device (2) .

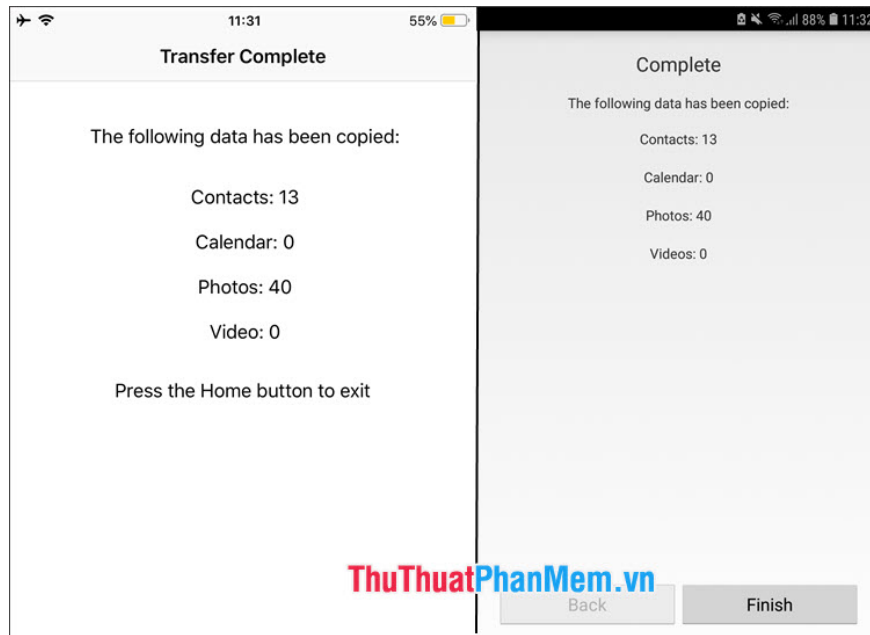

**Step 5:** The application will generate a pin on two devices. You enter the pin on the iPhone enter **Enter the Pin** . (1) on Android and click **Next** (2) .

**Step 6:** Choose the data you want to copy to Android from your iPhone. Please turn the switch to turn on **(1)** and click **Next (2)** . On Android phones this time will automatically copy data.

And finally the message **Complete** appears to be successful. The application will notify the amount of data copied as shown below.
