

# How to quickly turn on dark mode on iPhone using Control Center

This way you can quickly turn on iPhone dark mode right in Control Center without having to go to the Settings app like before.

Perhaps the iPhone dark mode, also known as the Dark Mode, is considered one of the new features that many users have been waiting for on iPhone and iPad with iOS 13 and iPadOS 13. With Dark mode, your eyes will not feel uncomfortable while surfing the web or reading stories on your phone when using your phone at night, while also saving more battery for your device.

To turn on dark mode on iPhone, you have to update to iOS 13, then go to Settings> Screen & Brightness, then turn on dark mode. However, you can turn on dark mode quickly on Control Center iPhone via the instructions below this article.

1. Common problems on iOS 13 and how to fix them
2. How to turn off 3D Touch on iOS 13
3. How to connect to Wifi without opening Settings on iPhone

## Instructions to quickly turn on dark background on iPhone

**Step 1:** To add dark mode to the control center, go to **Settings> Control Center** . Then select **Customize controls** .

There is another way you can turn on dark mode in the control center, that is, you press and hold the screen light adjustment bar here. A dark mode icon will appear at the bottom of the light bar.

If you like dark mode and want it to be the main interface theme on your phone, you can turn it on in Settings and leave it there, do not change to the light interface anymore. And if you want to change the interface often, follow the instructions above, bring the dark mode icon into the Control Center on the iPhone for easy change.
