

How to Record Audio from a DVD

There is a full range category of DVD disks on the supermarkets and many electronic stores, which are compacted with HQ frames and sound. And tons of DVD videos are updated on the network. If we love the music on these DVD, we may want to...

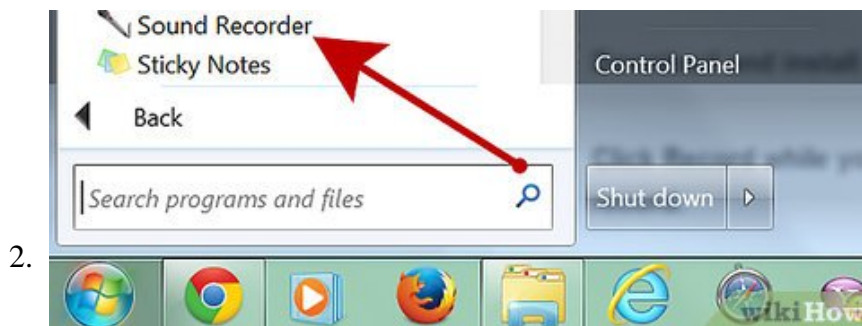

Method 1 of 1:

Record Audio from an internet DVD video

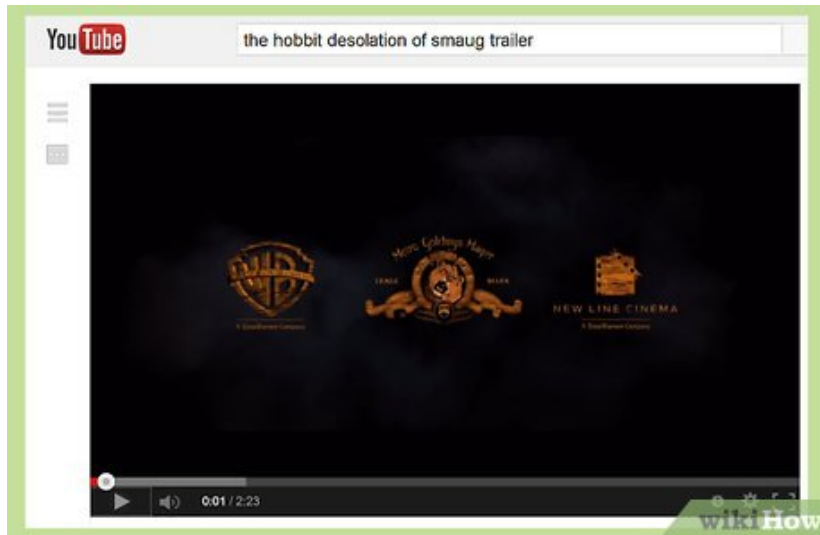

Preparation your items nearby You need a computer, a blank CD-R or CD-W and an audio recorder tool.

1. You can find many audio recorders like Freecorder, Audacity, or Adobe Audition on the internet.
2. If you feel complicated when you try to record audio with one of them, you may learn to record audio off DVD with a streaming audio recorder, which supports stereo recording on your computer's Windows operating system. But if there is no sound coming out through your computer's speakers, it can't record.

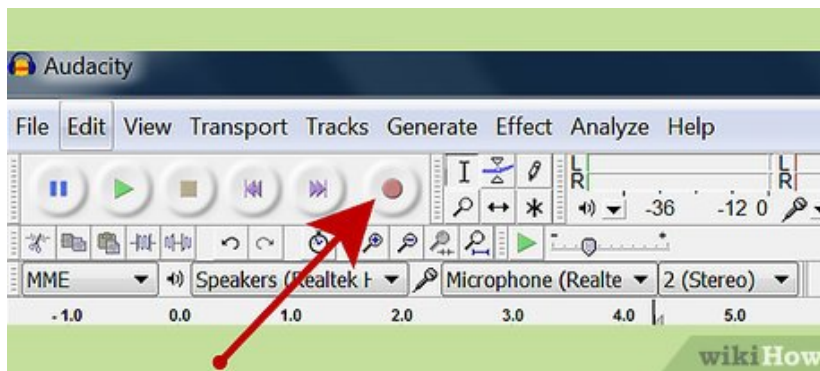

Download and install audio recorder to your computer.

3.

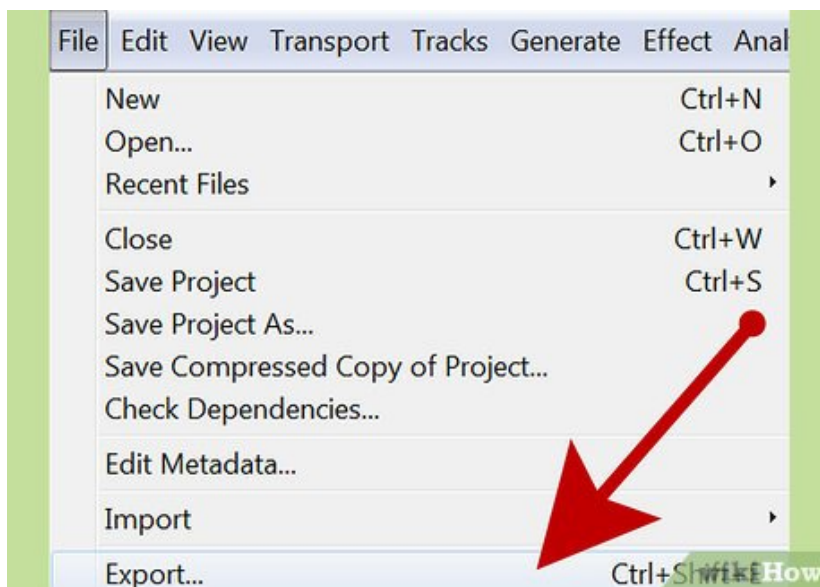

Play the DVD video on a website.

4.

Click Record while you are hearing the soundtrack, which you intend to record.

5.

Click the tools button on top of the interface. Select CD burner in the drop-down list. Just add the recorded files to burn them on you CDs.

1. Of course, you can repeat the process to record audio from movie, DVD, FLV, WMV, and so on.

6.

Play the dulcet sound in your car, or you may just archive it, for permanent storage.
