

How to record webcam videos on VLC Media Player

VLC Media Player also has the feature to support returning images from webcams on your computer, then save them as videos on the folder that the user has selected.

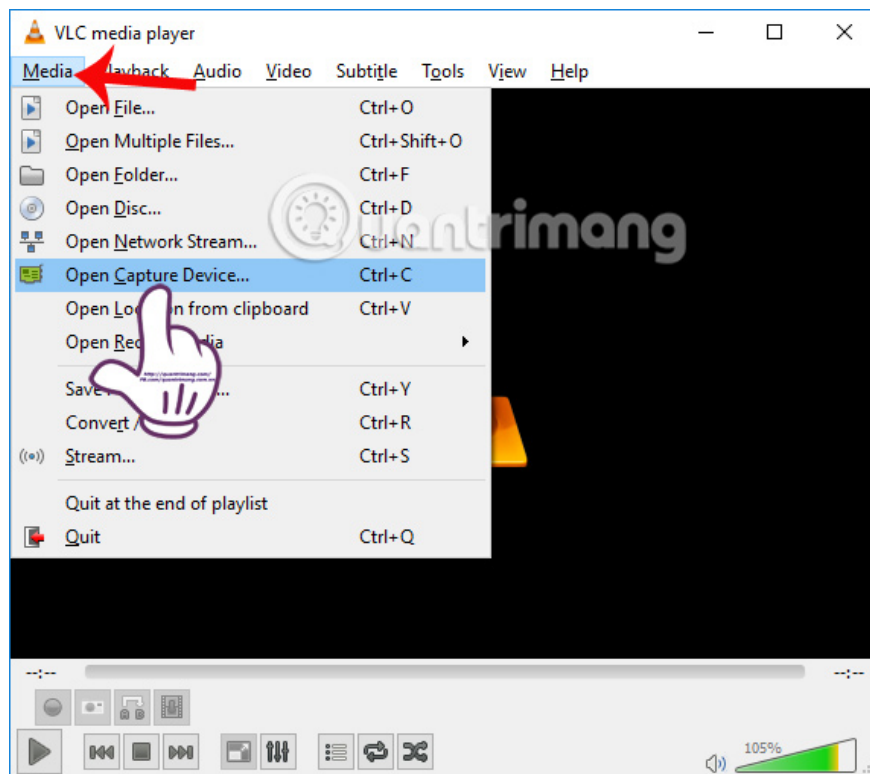

When it comes to VLC Media Player, anyone knows about the professional audio and video playback features of this software. However, VLC Media Player has many other useful and useful enhancements that you don't know, such as downloading YouTube videos right from the software, cutting videos using VLC Media, or recording screen videos with VLC Media.

In this article, we will introduce users to an interesting feature on VLC Media Player, recording video webcams on laptops. Videos after the recording will be saved to the folder that the user has selected, and you can share videos via Gmail, Facebook, .

1. Copy Media files from computer to iPhone using VLC
2. Discover VLC Media Player video format conversion feature
3. Instructions for taking Video images are watching with VLC

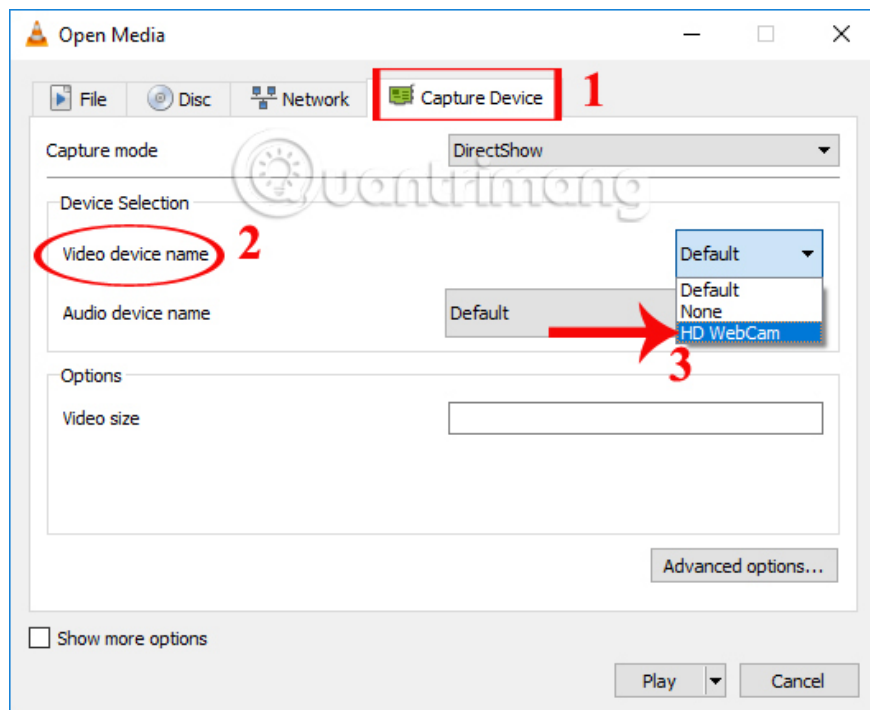

Step 1:

At the VLC Media Player software interface, click on the **Media** item and then click **Open Capture Device** .

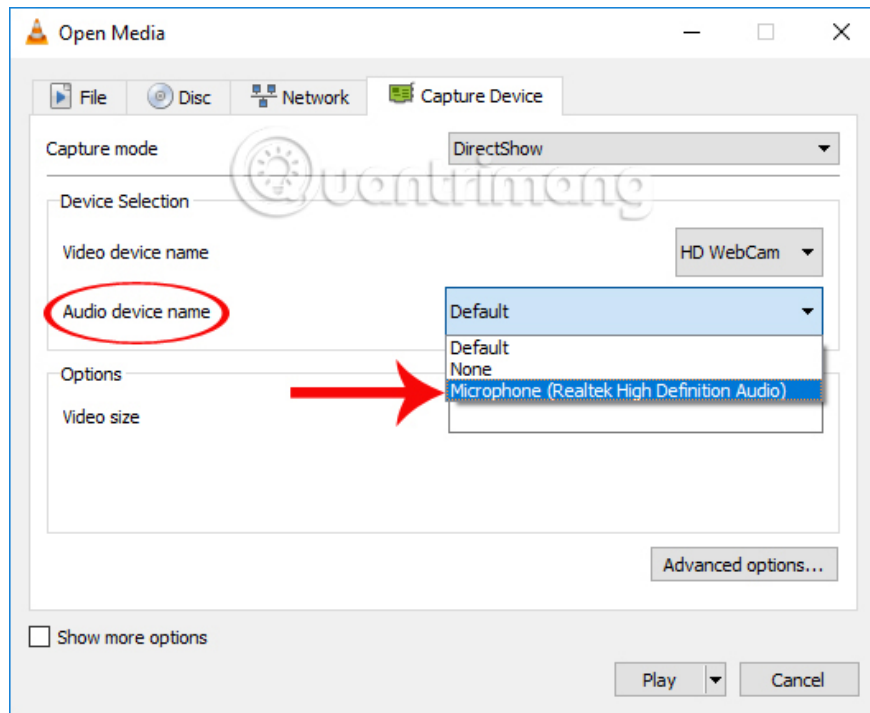

Step 2:

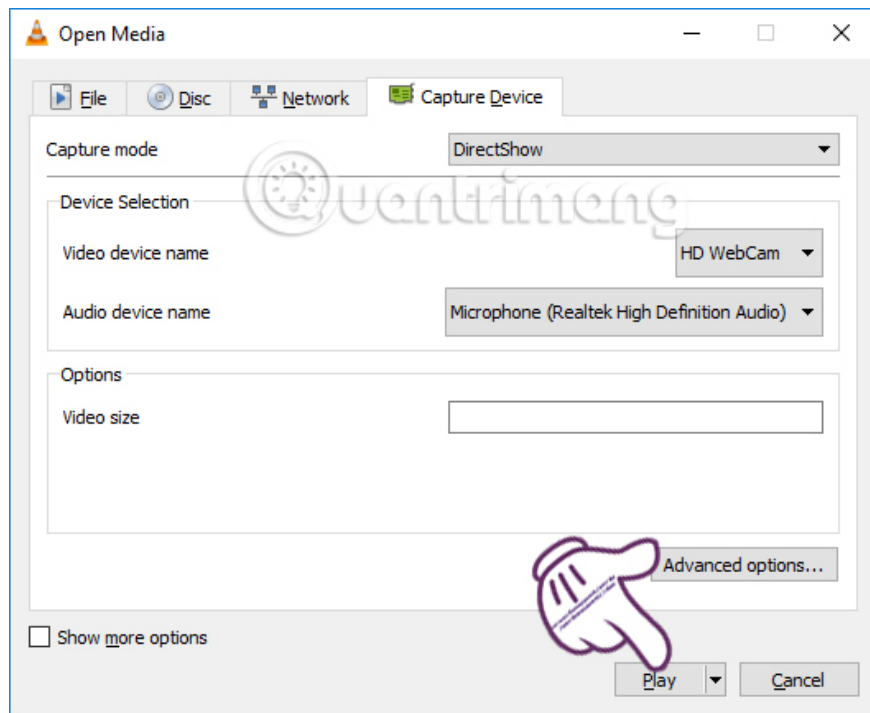

Switch to the Open Media dialog box. Here, we will click on **Capture device**. Down under the **Video device name** section, we **select the webcam recording tool** that connects to the computer to record webcam video using VLC.

Next to the **Audio device name section** , select the **microphone** and audio recording device if we want to record audio into the computer.

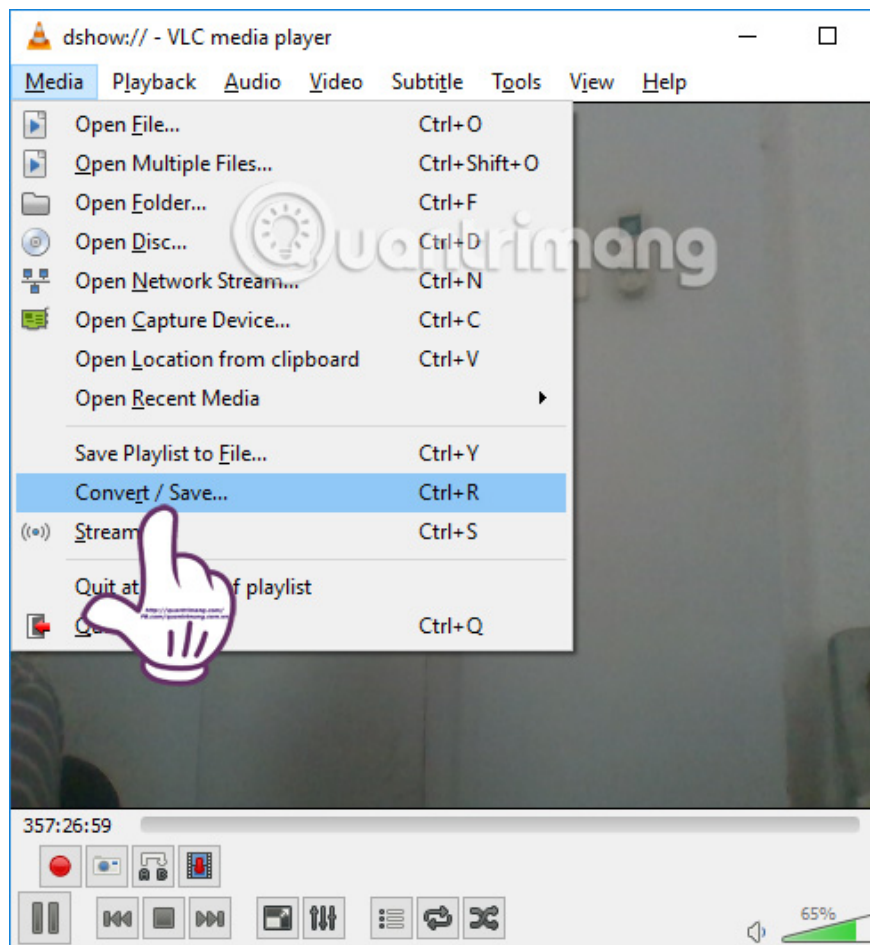

Finally, press **the Play button** below to proceed with the video recording.

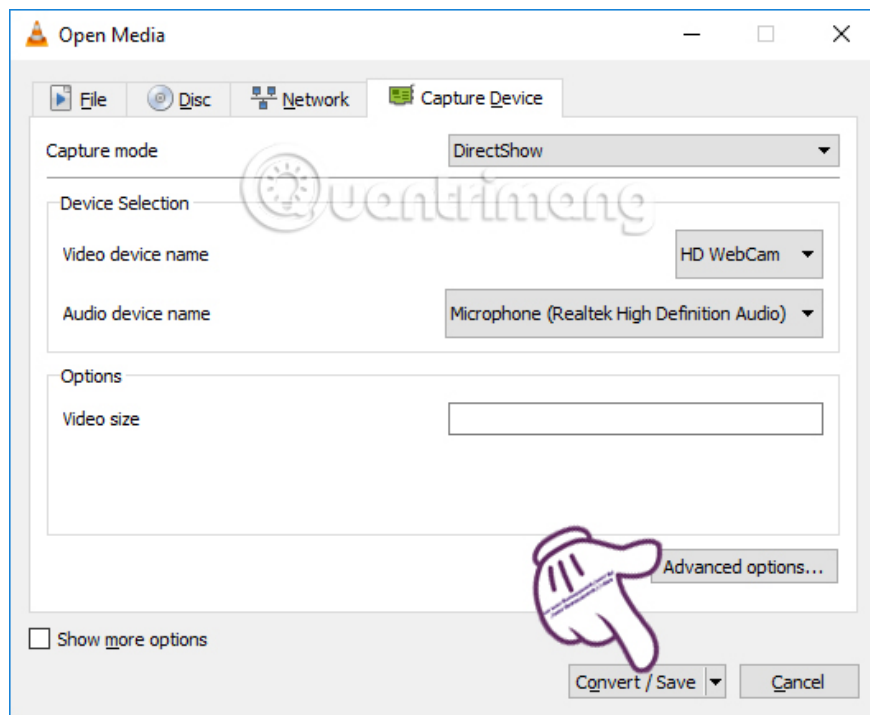

Step 3:

So we can record webcam video with VLC Media Player software already. To stop recording and save this video, users click **Media** and select **Convert / Save** . Or you can press the shortcut key combination Ctrl + R.

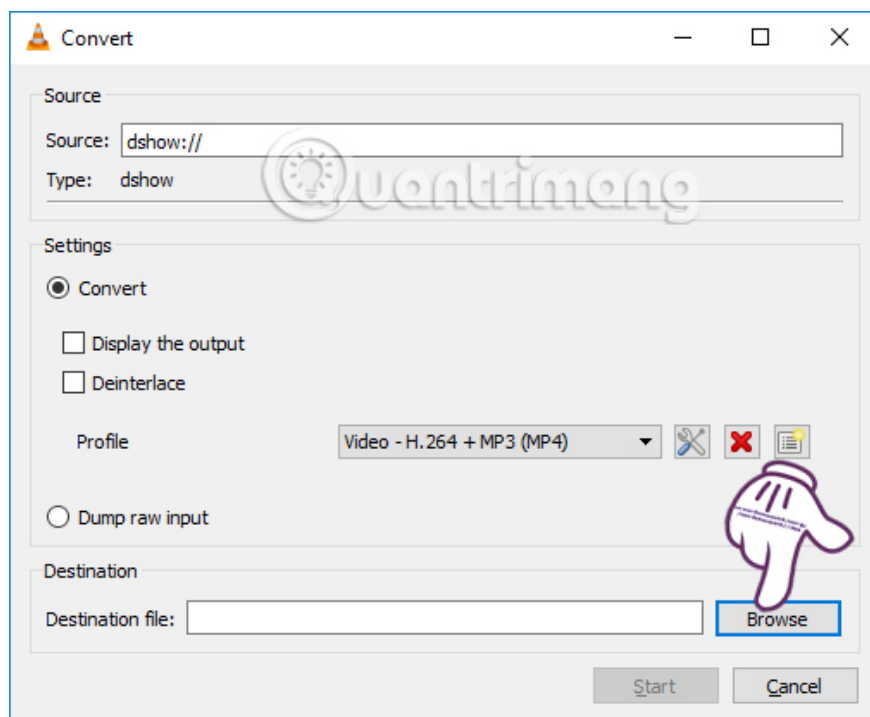

Step 4:

Switch to the Open Media dialog box, in the **Capture device** section, click **Convert / Save** below to save the video.

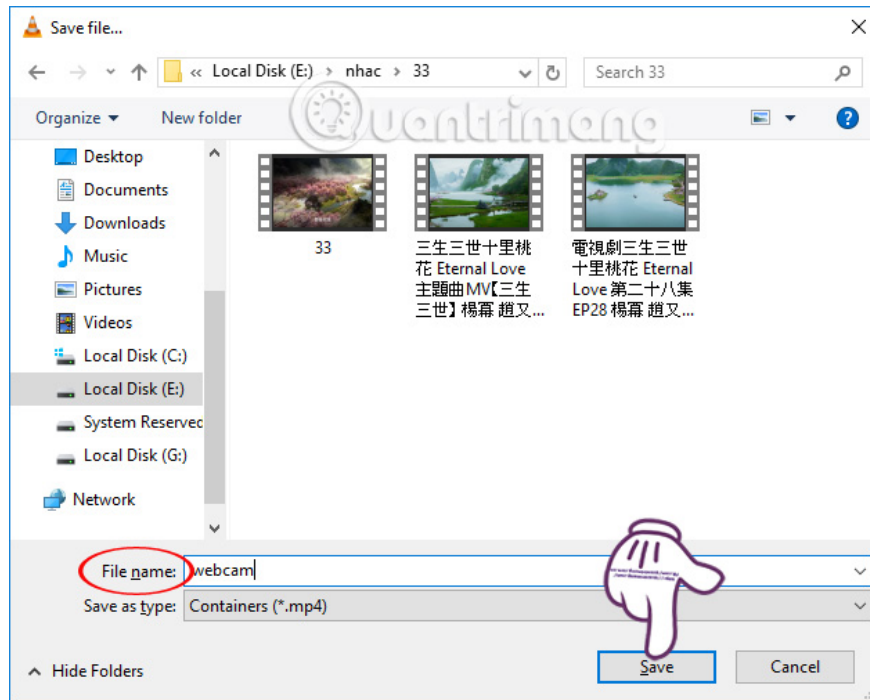

Step 5:

Users click on the **Browse** section of the next interface to select the recorded webcam video storage folder.

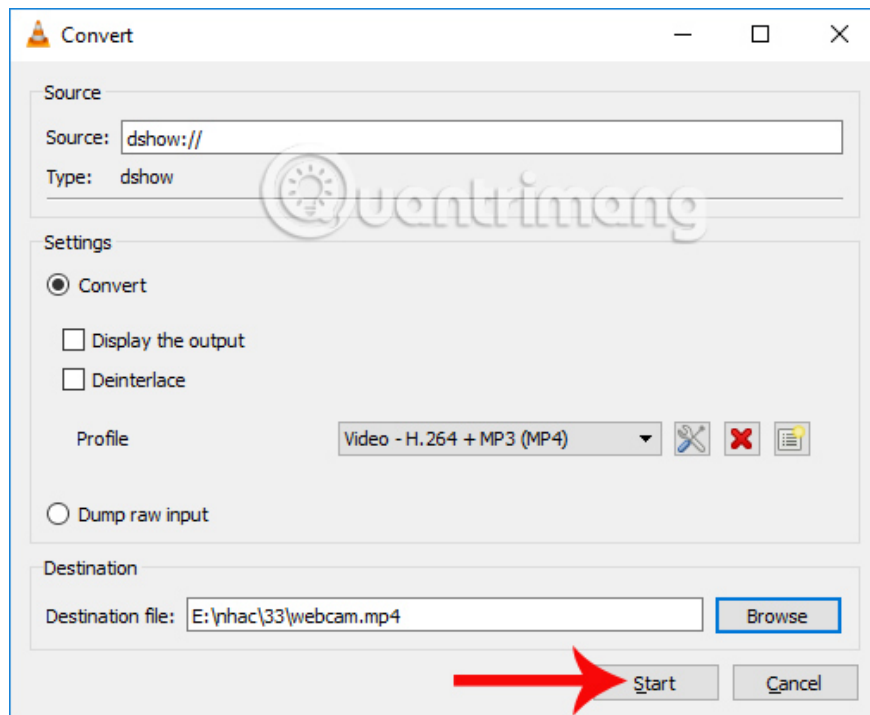

You select the folder and then **enter a name for the video** , then click **Save** to save.

Step 6:

Back to the interface on Open Media, we click on the **Start** button below to finish saving the video. Video webcam recording with VLC Media Player will be in .mp4 format, so you can watch videos using any multimedia program.

A feature is also quite interesting. We can replace webcam video recording software installed on the computer, using VLC Media Player video player software.

I wish you all success!
