Add Screen Recording functionality to the Control Center on iPhone.

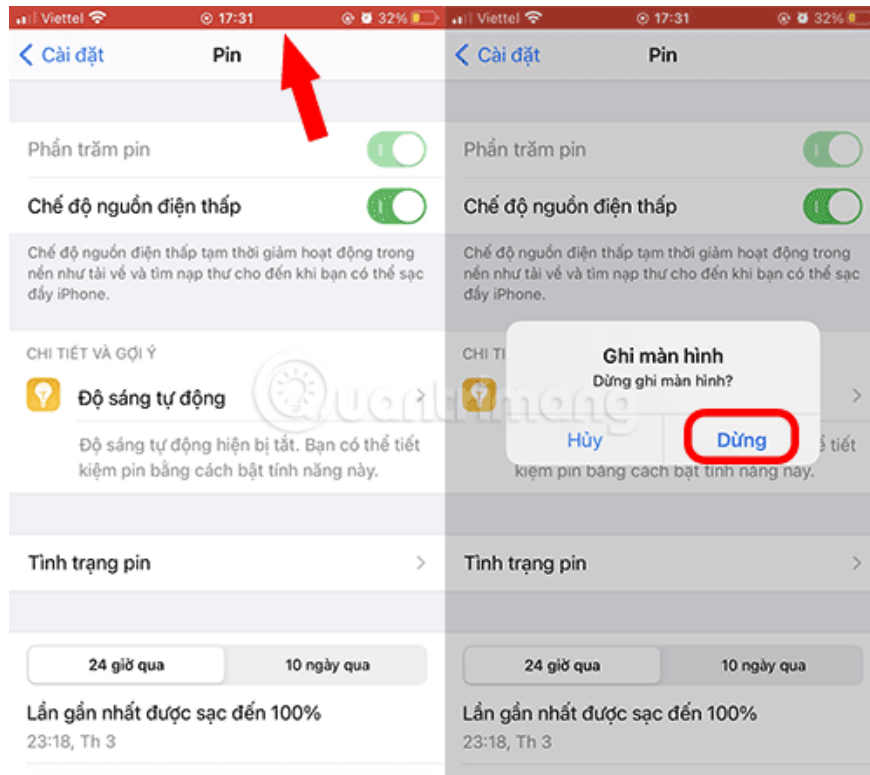

Step 2: Open **Control Center** > increase the volume on your iPhone to your desired level and tap the circular screen recording icon. This will record all system audio.

Step 3: The screen recording button will display a 3-second countdown timer before recording begins.

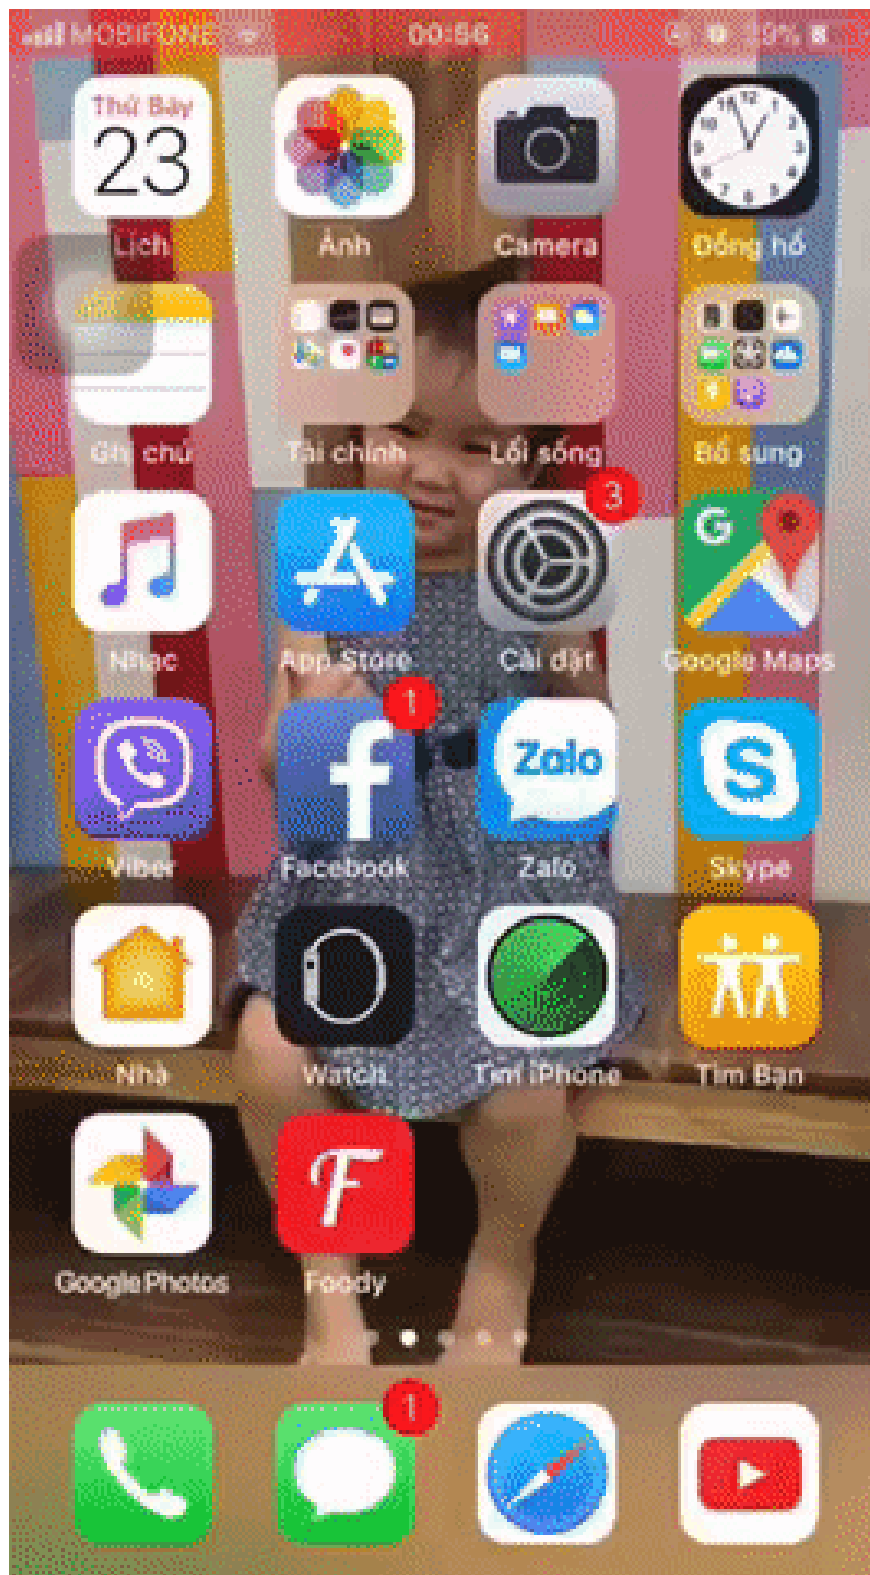

Step 4: Open the apps or perform the actions you want to record.

Step 5: Tap the red area on your iPhone's status bar > select **Stop** to stop screen recording.

Step 6: The iPhone screen recording video will be saved to Photos. Here you can crop and further edit the video if desired.

With some older iOS versions, tapping the screen recording icon will bring up a pop-up; tap **Microphone Audio** to enable microphone recording. The next step is to record a screen video on your iPhone/iPad running iOS 11, including the audio captured by the microphone, following the steps above.

This is an incredibly simple trick, but not all iPhone users notice it. Recording your screen while capturing audio from the microphone is very useful, especially when you're recording iPhone/iPad tutorial videos.

Video tutorial on how to record iPhone screen with sound.

Is it possible to record a FaceTime call screen?

Currently, it's not possible to record a FaceTime call screen on an iPhone with the sound on.

The best that the iPhone's built-in screen recorder (or any third-party screen recording app) can do is record your screen without any sound, which, however, doesn't achieve the purpose of recording a call.

And it's not just FaceTime. For example, you can only record Google Meet calls with audio on its web app. You can't do the same on your iPhone.

If you really need to record video calls on your iPhone, you might consider an alternative app called Riverside. According to Riverside, people can easily use this app to make and record video calls with audio without needing any other solution.

Use a third-party app to record your iPhone screen.

Record iPhone screen video using iTools

Recording your desktop or laptop screen is quite simple with the help of recording software like Fraps, Camtasia Studio. and it's very easy with iPhones now too.

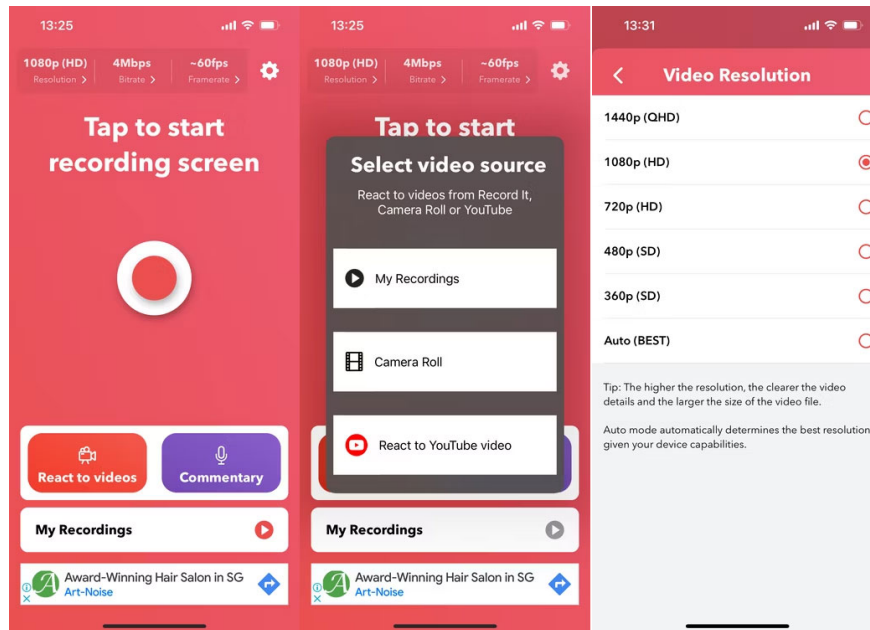

If your computer has iTools installed, you can also use this tool to record what's happening on your iPhone screen.

TipsMake.com has created a detailed video demonstrating how to record your iPhone on a computer using the iTools software. Please watch it below.

1. Download link for iTools

Record your iPhone screen using Record It!

Record It! is a screen recording app that lets you record reaction videos and comments. You can play an existing video on your iPhone or upload a YouTube video URL to the app. It will then record the content on your screen while using your iPhone's front camera to capture your reaction to that content.

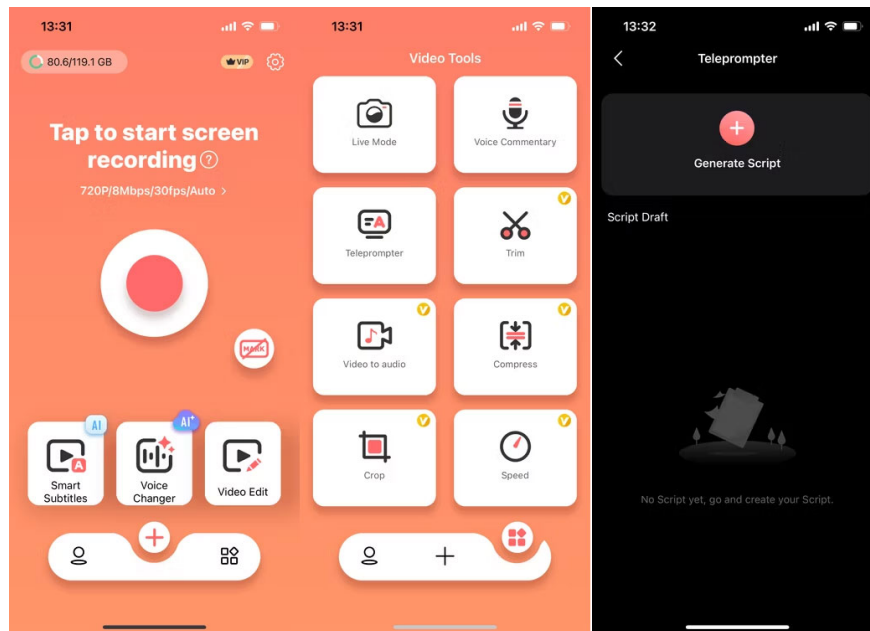

This app also provides a simple video editor if you want to trim your recording, resize the frame, add background color, etc.

Record iPhone screen video using V Recorder

Another iPhone screen recording app you should try is V Recorder. Besides allowing you to record reaction videos, one of the app's free features is a teleprompter if you want to prepare a script for your video beforehand.

Other features include a voice changer and an automatic subtitle generator. While you'll have to pay a subscription fee to use these features repeatedly, you can try them for free once within the app.
