Note to recover password on iPhone

Limited-time recovery : Recently deleted passwords are only stored for 30 days before being permanently deleted. After that time, you won't be able to recover them.

iCloud Keychain Sync : Password recovery only works if iCloud Keychain is enabled on your device. If iCloud Keychain was disabled before deletion, the password may not be recoverable.

No manual backups : Unlike photos or documents, passwords don't have their own manual backup system unless you use a third-party password manager.

Sync Mac and iPhone/iPad : If you delete a password on one Apple device, it will be deleted from all devices using the same iCloud account. However, you can recover that password from any Apple device connected to Keychain.

Security and privacy : Apple encrypts all saved passwords for safety. Password recovery requires authentication using Face ID, Touch ID, or your device passcode.
