

How to reduce lag, jerk game play on Windows 10?

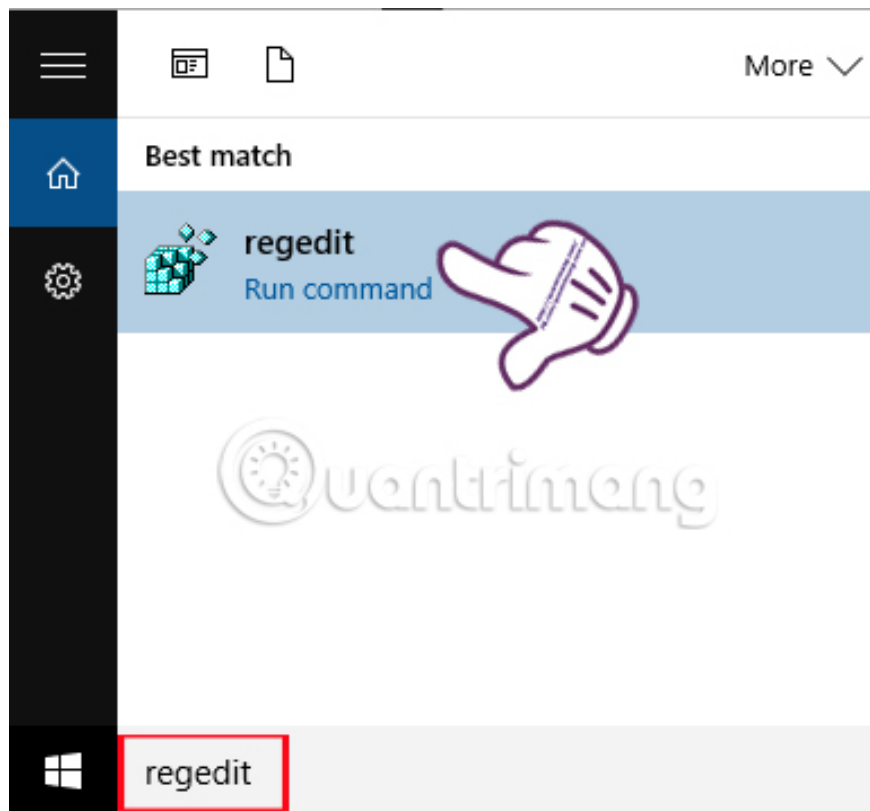

Game Bar is a feature that helps gamers record images while playing games on Windows 10. However, this feature makes the lag, jerky when playing games regularly.

Normally when we play games on Windows 10 it will be extremely smooth because Windows 10 possesses upgraded features compared to previous operating systems. However, with FPS titles, there is a phenomenon of jerky or lag, also called Low FPS when you play on Windows 10.

This is due to the built-in Game Bar on the Xbox app on Windows 10, which helps users capture images while playing games. When we launch the games, the Game Bar will also automatically start and affect the performance of playing Windows 10 FPS games. The best way is to disable Game Bar on Windows 10.

Step 1:

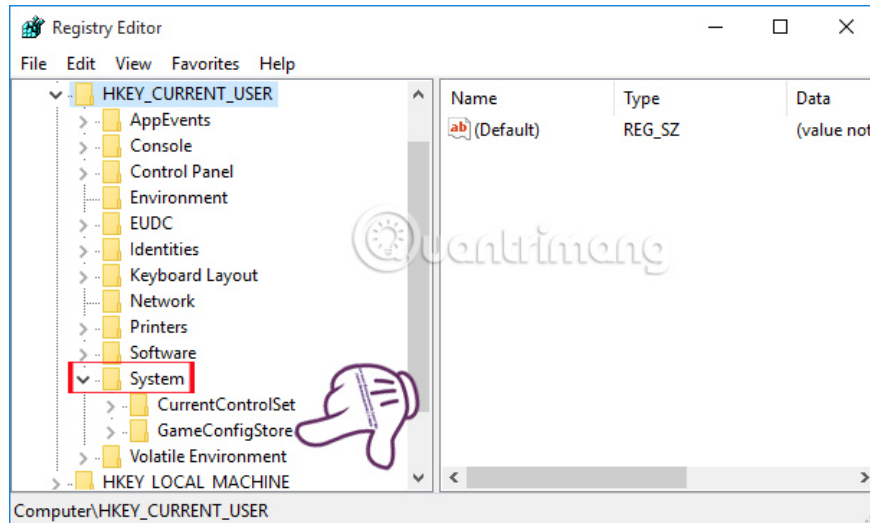

At the search bar on Windows, we type the **keyword regedit** and access the search results.

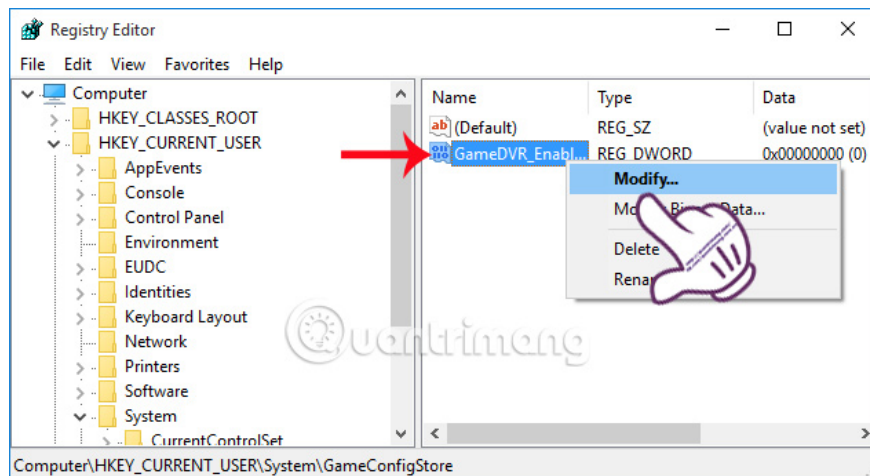

Step 2:

At the Registry Editor interface, we access the following link:

HKEY_CURRENT_USERSystemGameConfigStore

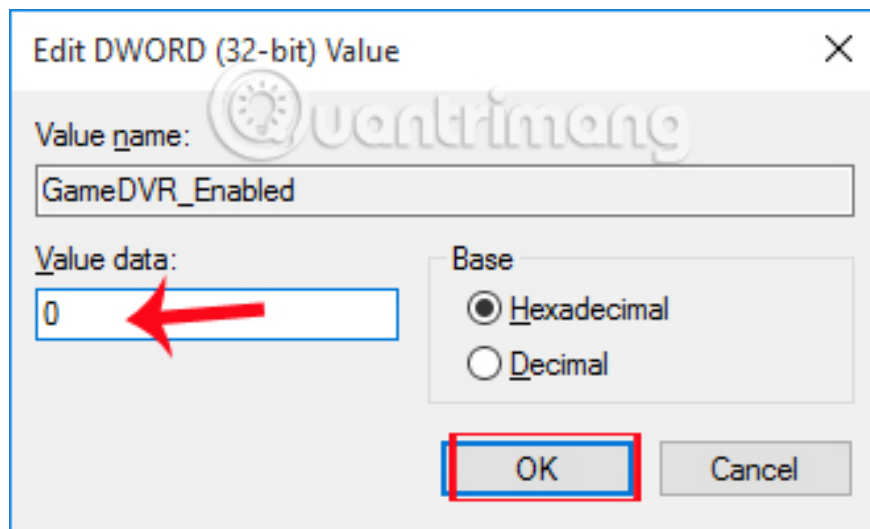

Next, look at the right interface and right-click on `GameDVR_Enabled` and then choose **Modify**.

Step 3:

Appearance window **Edit DWORD (32-bit) Value**. Here we will change the Value of `GameDVR_Enabled`. In the **Value Data** box, **change the value from 1 to 0** and click **OK** to save the change.

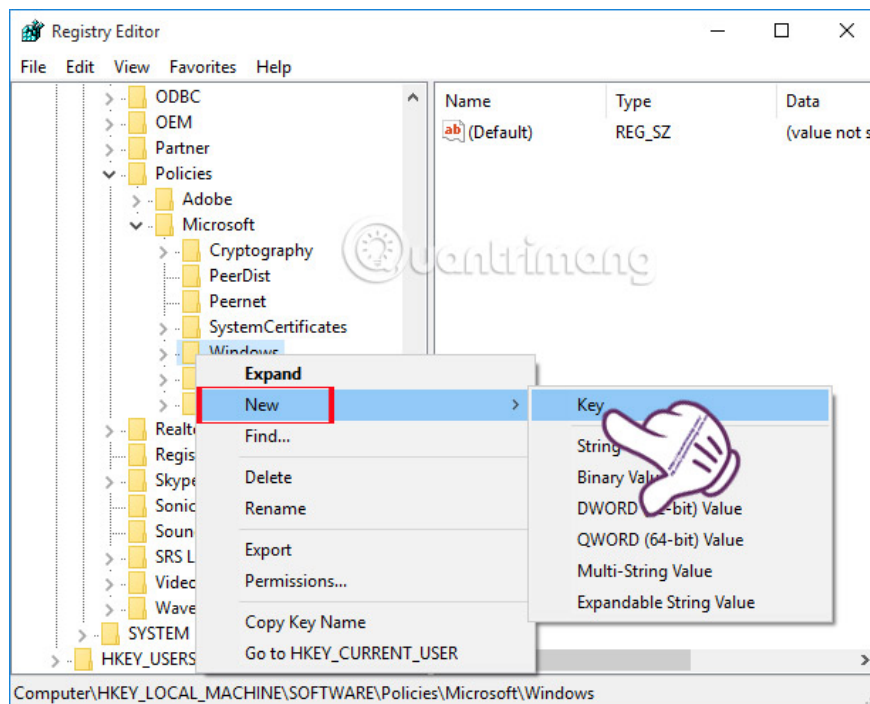

Step 4:

Continue to access the following link:

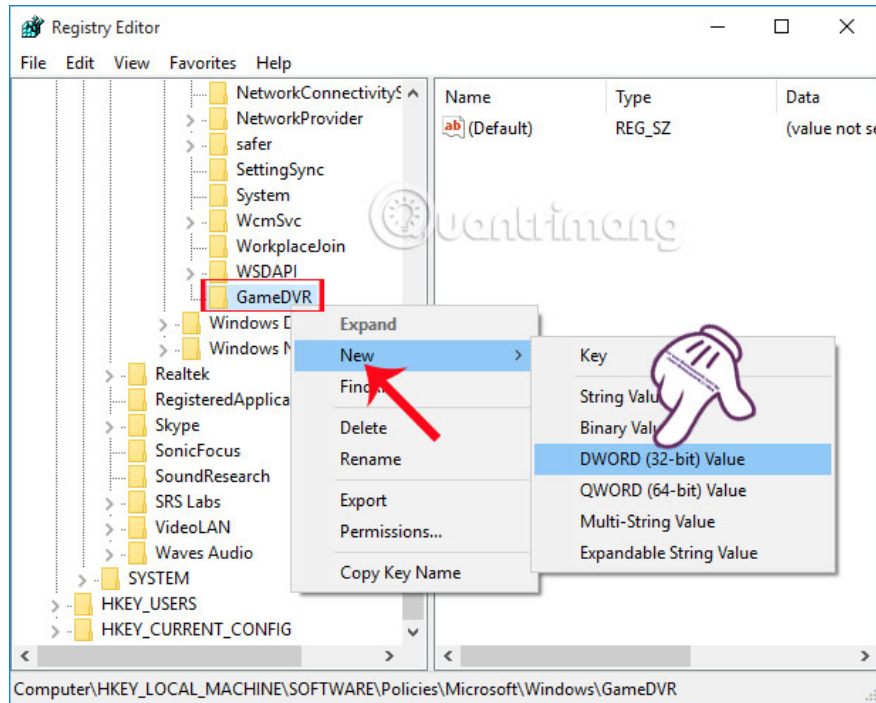

HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows

We right-click **Windows** and select **New> Key**.

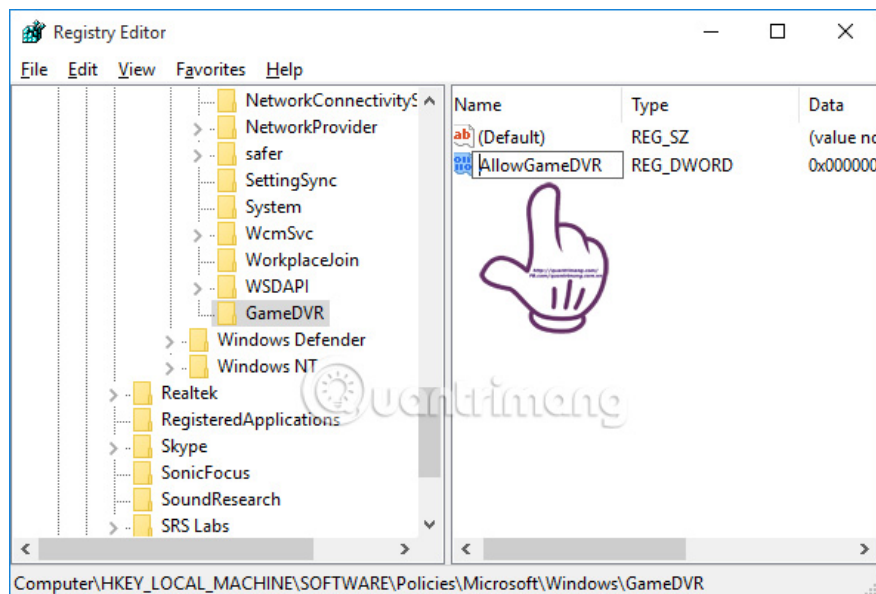

Step 5:

You **name the new GameDVR Key** . Then right-click and choose **New> DWORD (32-bit) Value** .

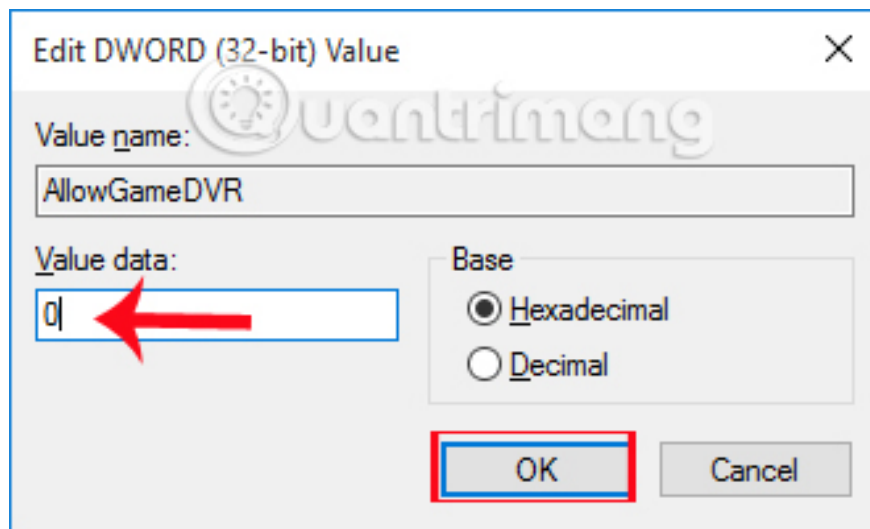

Step 6:

Looking at the interface on the right, you will **name the new DWORD** as **AllowGameDVR** .

Step 7:

We double-click **AllowGameDVR** to change the Value value. At **Value data** , we **enter the value 0** and click **OK** to save the changes.

After we have completed the steps to change the parameters on Windows 10, we restart the computer to make the changes effective. The FPS titles when playing on Windows 10 will no longer be jerky or lag as before.
