

How to re-enable Registry backup on Windows 10

In May 2020, Microsoft announced that Windows 10 will no longer automatically back up the Registry starting with version 1803. You can still back up the Registry manually, but in many cases, the automatic backup feature very helpful.

Here TipsMake.com will guide you to re-enable the Registry automatic backup feature on Windows 10.

Previously, Windows 10 operating system would automatically back up your Registry to the Regback folder. As of October 2019, users received that the feature was no longer working and assumed it was a system failure.

Microsoft says this is a change to reduce the overall size of Windows. In fact, RegBack doesn't fight that much space (about a few hundred MB). Moreover, in many cases you will need to back up the Registry when it detects your computer freezes, crashes or boot errors, . To re-enable this feature on Windows, do the following:

Step 1: Press the **Windows + R** key combination to open the Run dialog box, enter **regedit** in the box and press **Enter** .

Step 6: Restart your PC.

After restarting, Windows will start backing up the Registry to the RegBack folder and creating a RegIdleBackup task to manage subsequent backups. You can find the RegBack folder by the path: C:WindowsSystem32configRegBack.

Good luck!!!
