

How to remove devices connected to your Apple ID account

Apple ID users often log in to their devices on multiple computers and phones. Similarly, when you use iTunes and log in to your account, that device is also connected to your Apple ID account. To avoid losing your account or being hacked, users should remove all devices connected to their Apple ID account.

To use an iPhone, all users must have an **Apple Store account**, also known as **an Apple ID, and iCloud**. Creating an Apple Store account and using an Apple ID isn't difficult. However, when creating an Apple ID, there are security questions and passwords that you absolutely cannot forget. Because **the Apple ID password** requires both lowercase and uppercase letters and numbers, many users who haven't used their iPhone for a long time forget their password. The importance of an Apple ID is so high that if you forget your password and security question, you will have difficulty using the features on your iPhone, and your phone may even be disabled. This article, "**Removing Devices Connected to Your Apple ID**," will show you the importance of your Apple ID and why you should log out of devices connected to your Apple Store account.

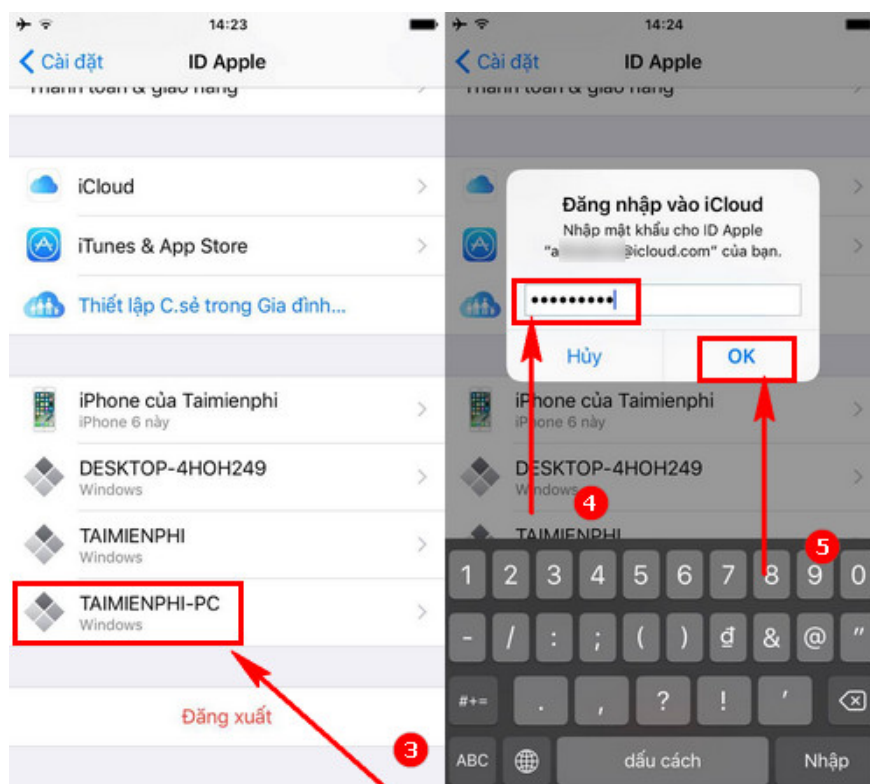

How to remove devices connected to your Apple ID account

Step 1: In the iPhone app interface, go to **Settings** > then tap on your **Apple ID account** at the very top.

Step 2: Scroll down to the bottom, and you'll see the devices currently logged in with your Apple ID. To remove a device connected to your Apple ID, select that device.

Then enter your **Apple ID password** and press **OK**.

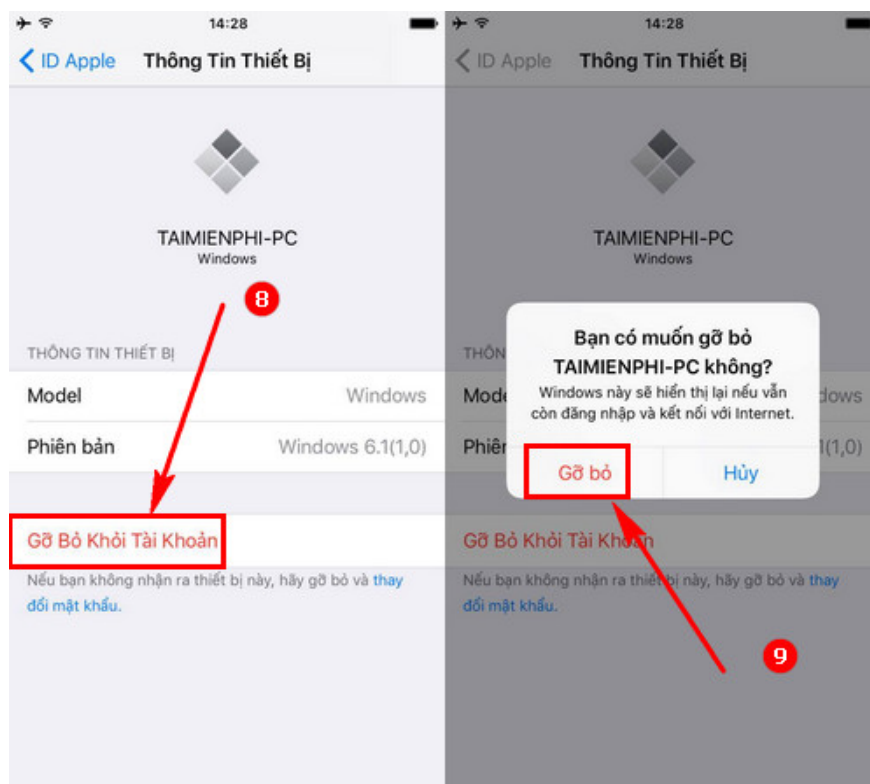

Step 3: Here you can see the importance of your Apple ID, as your iPhone will ask you to re-enter **the two security questions** you previously used to create your iCloud account. Users need to enter them accurately to proceed with logging in.

After you have entered the information, press **Verify** .

Step 4: Once you've accessed the iCloud sign-out control panel on your phone, remove the devices connected to your Apple ID by tapping " **Remove from account** " . Tap "**Remove**" to confirm one more time.

That's it, the steps to remove devices connected to your Apple ID account are very simple. You can follow them one by one to remove all unfamiliar devices using your iCloud. However, the important issue is that many users often forget their iCloud password, Apple ID, or the two security questions they used when creating their account. If you forget your iCloud password or Apple ID, you should use Gmail to recover it. Because passwords contain numbers and uppercase letters, making them easy to confuse, users should save their passwords in a note so they can refer back to them when needed.

The importance of an iCloud account is further demonstrated by the fact that if you forget your device's unlock password, you can use your iCloud account to unlock the device. Of the three methods for unlocking an iPhone with a forgotten password, most require you to remember your iCloud password. Since there are three ways to unlock an iPhone when you forget your password, even if you don't want to remember your lock screen password, you should still remember your iCloud password. Hopefully, these tips will help you use your iPhone, iPad, or MacBook to the best of your ability.
