

How to remove malicious software (malware) on Android applications?

On Android devices, every time you open the app up you see the popup popup window appear. You cannot close these advertising windows. In this case it is very likely that the ads on your application containing malicious software (malware) can be harmful to your Android device.

On Android devices, every time you open the app up you see the popup popup window appear. You cannot close these advertising windows. In this case it is very likely that the ads on your application containing malicious software (malware) may be harmful to your Android device. How to remove these malicious software, please refer to the following article of Network Administrator.

Step 1:

You open the application and wait until the device screen appears ads on the screen.

Step 2:

Press **Menu** button or **Recent Apps** button to see the order of applications you have opened.

Step 3:

On the recent applications interface, you look at the final application.

In the **thumbnail** (**thumbnail**), you will see an ad or an empty square. Malware (malware) uses icons and generic names to hide.

Step 4:

Go to Settings, choose **Apps** , find the application containing malware (malware), then select **Uninstall** . If the uninstall option is not available, you can select **Disable** .

Step 5: Check again

After you've removed the application that contains malware (malware) you can check to see if the malware has been completely removed by opening another application.

If there are still ad codes installed in your application, follow the 4 steps above.

You can refer to some of the following articles:

1. **Prevent advertising notifications on Android**
2. **3 ways to uninstall apps for Android devices**
3. **Delete all Android devices, restore original settings**

Good luck!
