

# How to remove the 'Give access to' context menu on Windows 10

If you never use this feature, you can remove Give access to the context menu in Windows 10 File Explorer.

Since the Windows 10 Fall Creators Update, the old **Share with option** in the Windows Explorer context menu has been renamed **Give access to**.

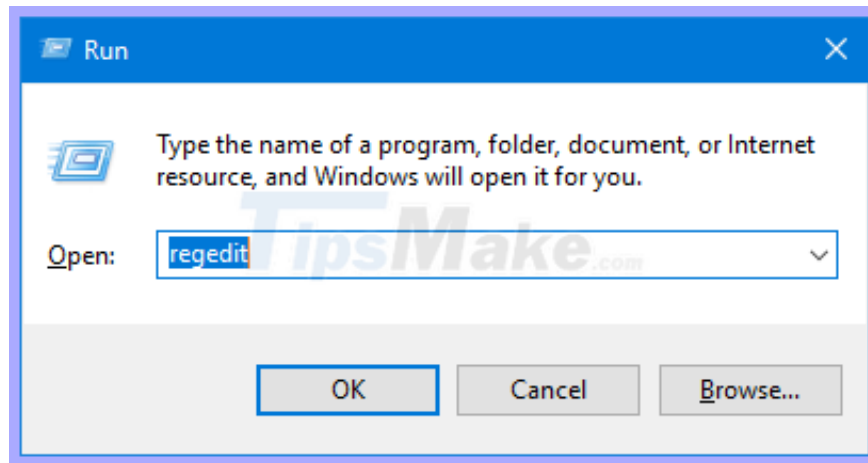

This option allows you to quickly share folders with other users on the network. However, if you never use this feature, you can remove **Give access to** the context menu in Windows 10 File Explorer.

The old Share with option in the Windows Explorer context menu has been renamed Give access to

## How to remove Give access to from context menu in Windows 10

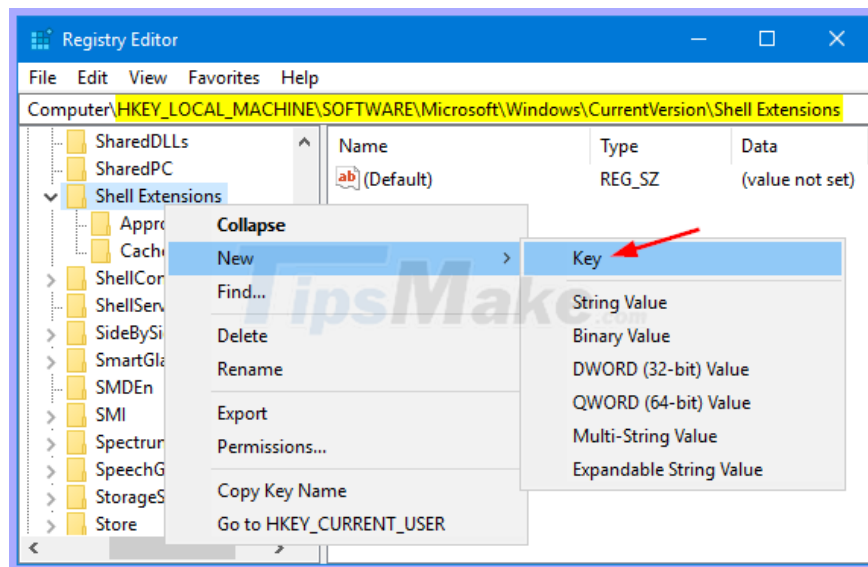

**Step 1.** Press the Win+ key combination R to launch the **Run** dialog box, then enter **regedit** and press Enter to open Registry Editor.

Open Registry Editor

**Step 2.** In Registry Editor, browse to the following key:

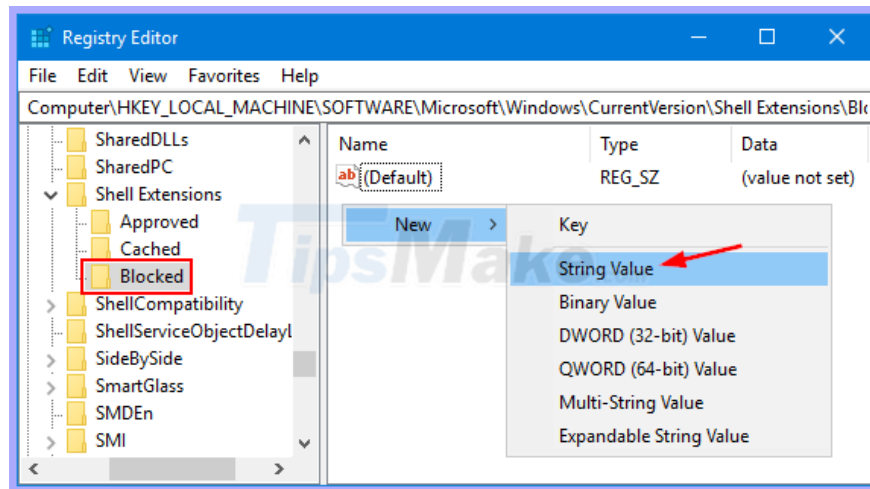

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Shell Extensions

Create a new key and name it **Blocked**

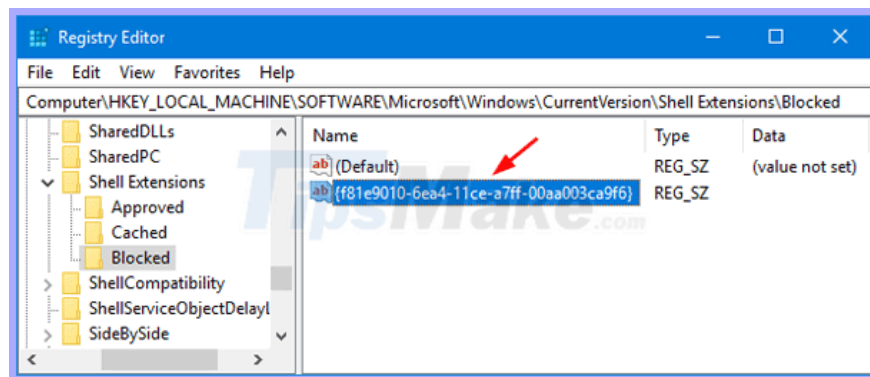

Right-click on the **Shell Extensions** key on the left, select **New > Key** . Name it **Blocked**.

**Step 3.** Select the new **Blocked** key , then right-click an empty area on the right, and select **New > String Value** .

Select the new Blocked key and create a new string value for it

**Step 4.** Name the new string `{f81e9010-6ea4-11ce-a7ff-00aa003ca9f6}` and leave its data value blank as shown below.

Name the new string `{f81e9010-6ea4-11ce-a7ff-00aa003ca9f6}` and leave its data value blank

**Step 5.** Restart File Explorer or log out and then log in to see the changes. Now, the **Give access to option** has been removed from the right-click context menu in File Explorer. If you want to restore that option again, simply open the Registry Editor and delete the generated **Blocked** key .
