

# How to roll back to Windows 11 23H2 update

If after updating Windows 11 24H2, your computer may not have enough configuration to use the new features, causing some lag, you can go back to Windows 11 23H2 update.

Microsoft has released the 24H2 update for Windows 11, with many improvements and some new features. However, after updating Windows 11 24H2, your computer may not have enough configuration to use the new features, causing some dots, or you are not satisfied with the new features. If so, you can go back to the Windows 11 23H2 update.

## Instructions to roll back to Windows 11 23H2 update

It is important to back up all important files, accounts, and login information before proceeding.

Restoring the system software requires booting and installing the previous version from a USB or external drive. To find the ISO for Windows 11 23H2, click the link below.

1. Download Windows 11 23H2 ISO

Next, you need to create a bootable USB or DVD (if you have a drive). You can do this through the Diskpart program or the PowerShell utility, with scripts that can be found on the Microsoft website at the link below.

1. Create installation USB or DVD

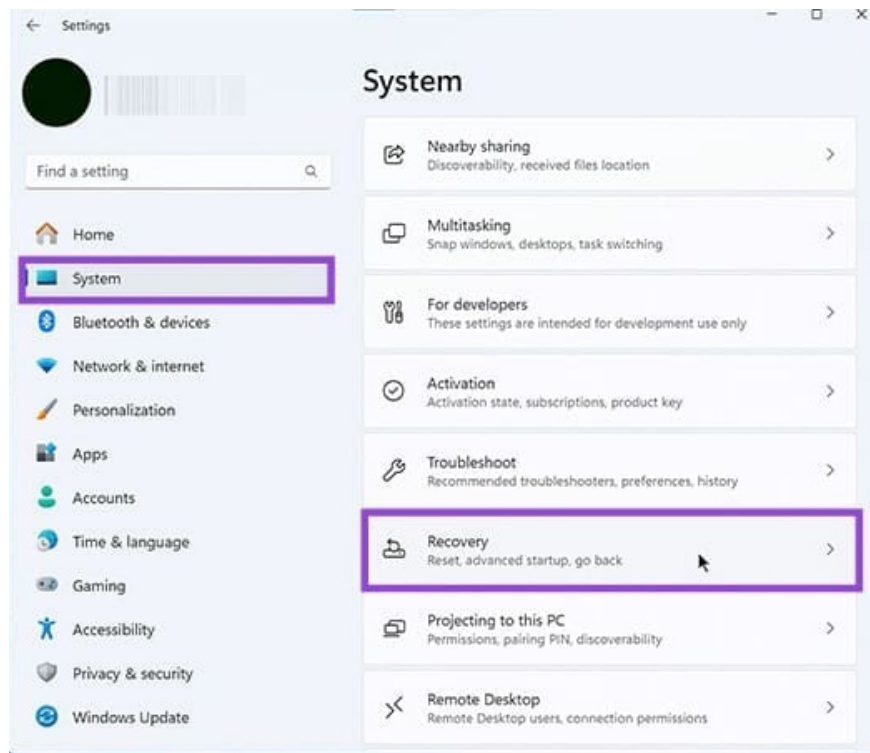

Finally, restart your computer and press the required key (F2, F11, F12 or Del) to enter BIOS and boot from USB or DVD. Select your USB and BIOS will boot and reinstall 23H2 into your computer.

## Back to Windows 11 23H2 in 10 days

Microsoft allows Windows users to roll back to the previous version within 10 days.

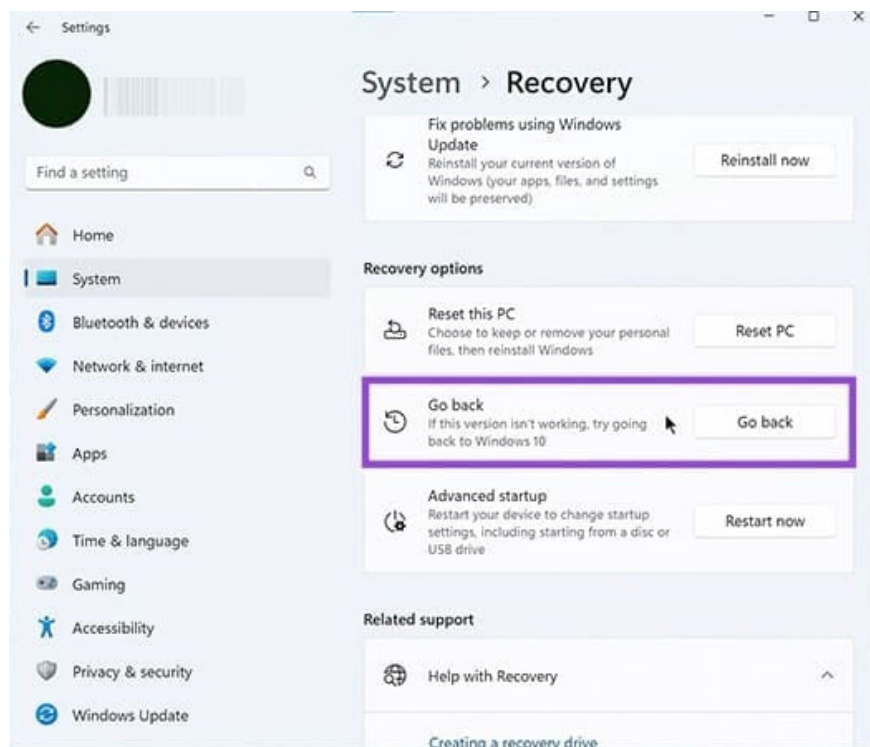

### Step 1:

Press **Windows + I** to open **Settings** , then **select System** , then look to the side and click **Recovery** in the content next to it.

## Step 2:

Switch to the new interface, **click Go Back** to return to the most recent software version, which can be Windows 10 or 23H2. Then enter the reason for wanting to return to the previous version. Confirm your choice one last time and the restore process will begin.

Be careful not to turn off the machine or interrupt the process during this time.
