

How to rotate text in Photoshop

Text on Photoshop can change different angles with a simple implementation.

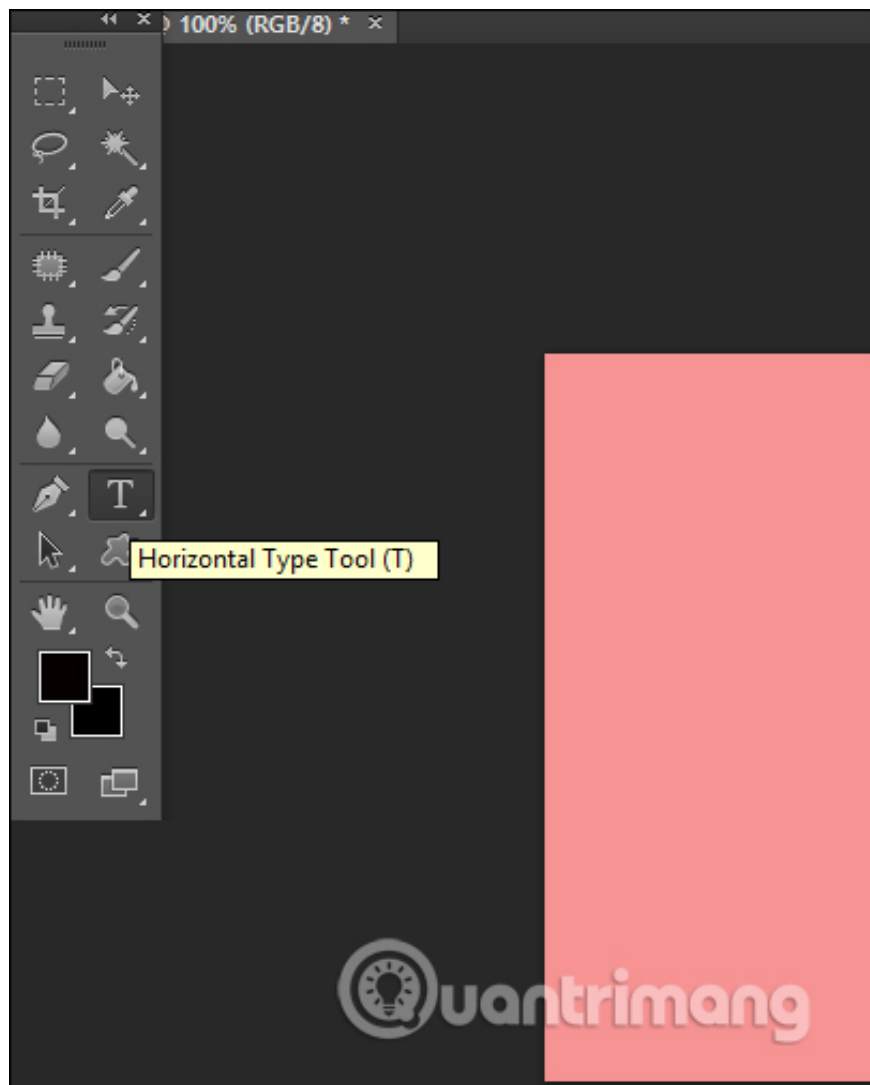

To annotate in an image, we can use drawings or text in Photoshop images. By default, when writing text in Photoshop, point the text horizontally. However, we can change the direction of the text vertically, or in many different directions with a very simple implementation. You just need to rotate the text to the right direction when editing photos on Photoshop. The following article will show you how to rotate text in Photoshop.

Instructions for changing the direction of text in Photoshop

Step 1:

First you need to click on **the T icon** in the toolbar to the left of the screen to write text on Photoshop.

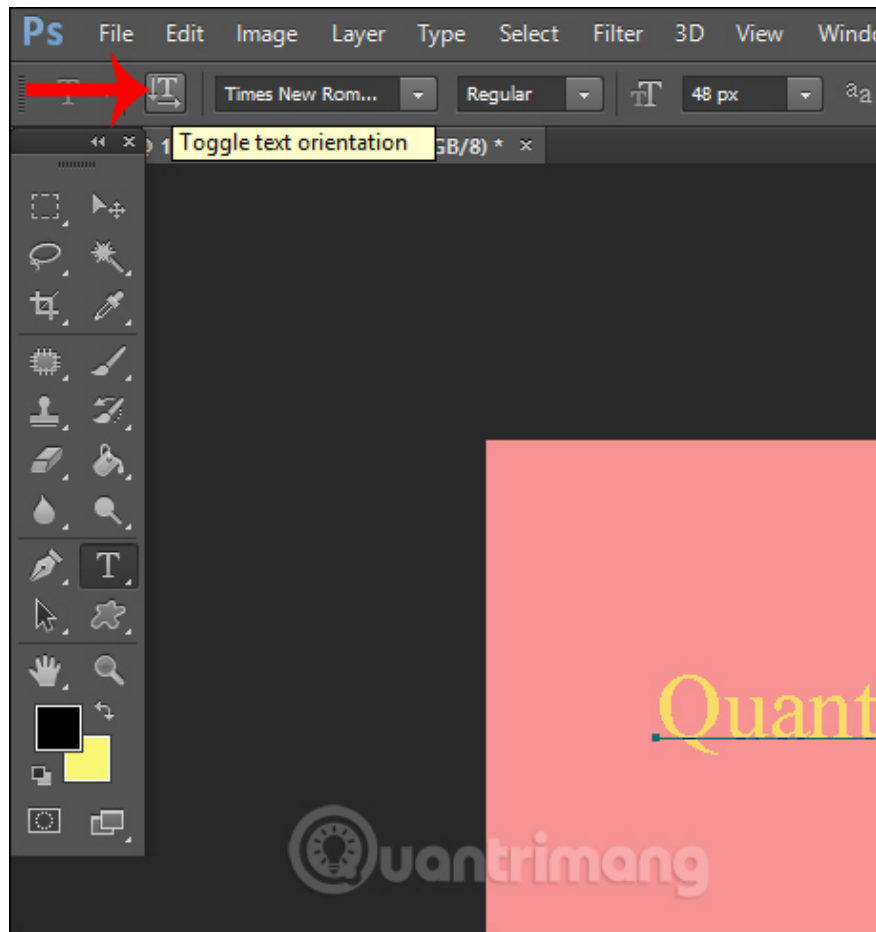

Users choose font, font size, font color, font format and then write.

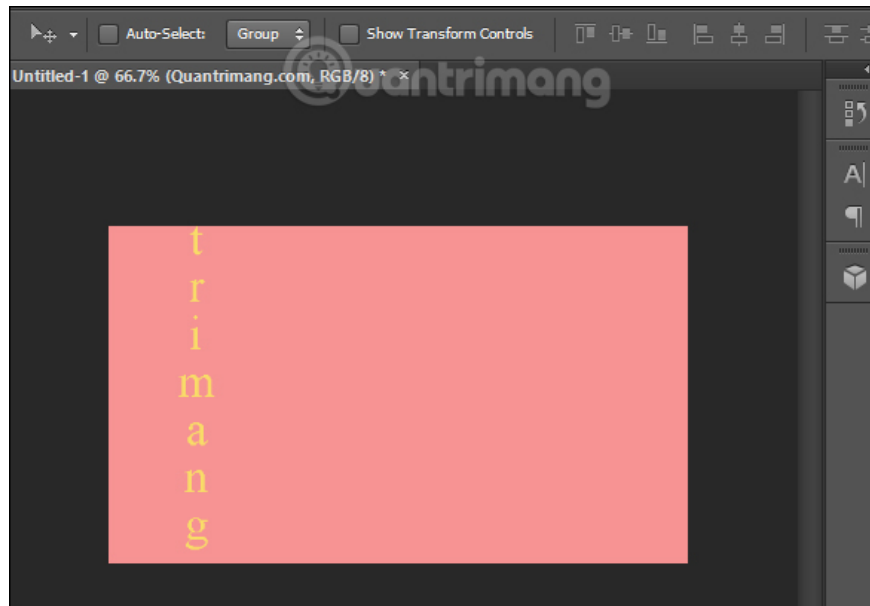

Step 2:

After you have finished writing the text, the user will highlight the text and click **the Toggle Text icon** on the toolbar at the top of the interface as shown below.

Step 3:

Immediately the text will be converted to vertical writing as shown below.

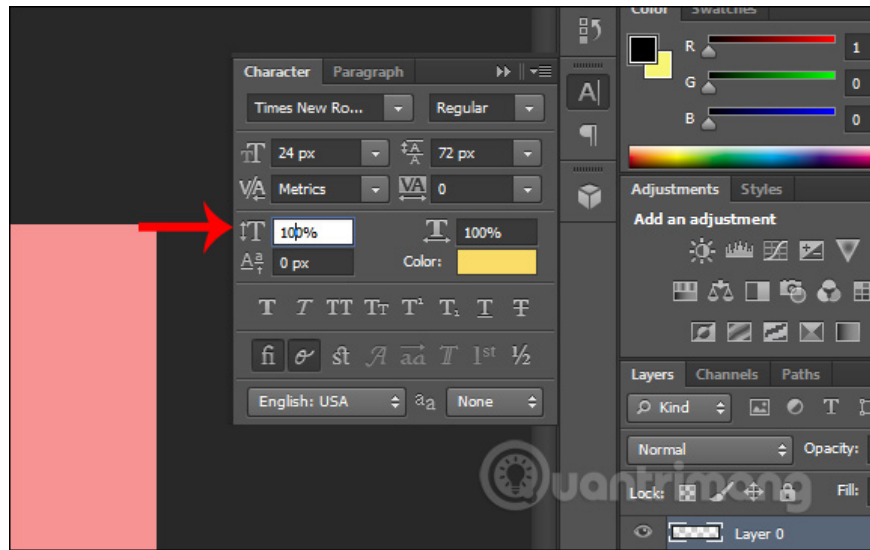

However, due to the large letters spacing, the text content was spilled out of the image. Users can change the text size accordingly, or click on **the icon to adjust the character** as shown.

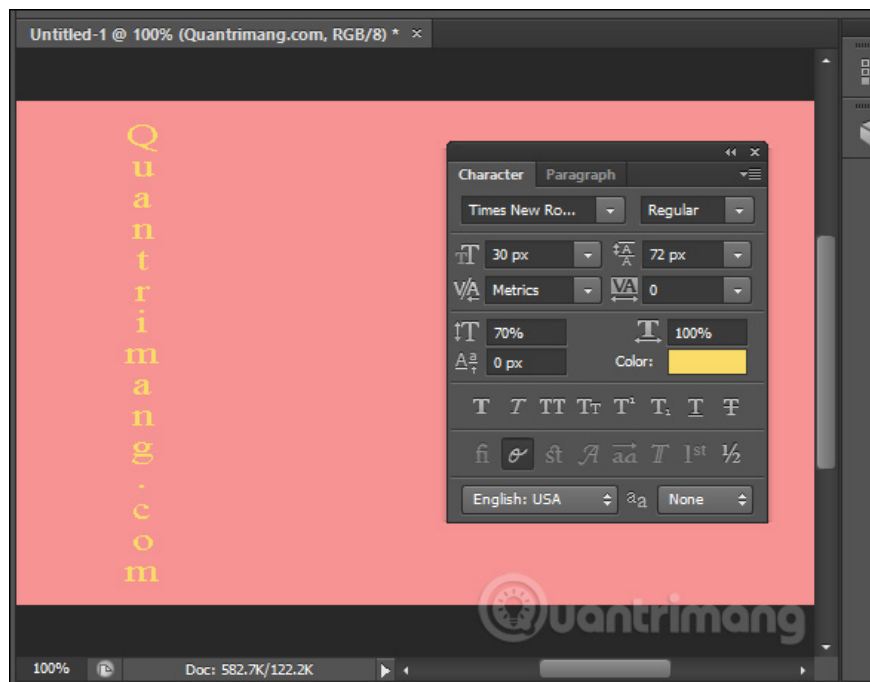

Step 4:

Display the small dialog box interface next to it. Here click **the Character section** to adjust the distance, change the font or change the font size. Click on **the vertical symbol T** to adjust the length of the text.

If you drop below 100%, the text length is shrunk and does not overflow from the image. You should combine the length of the text and the font size to create vertical text in the appropriate image.

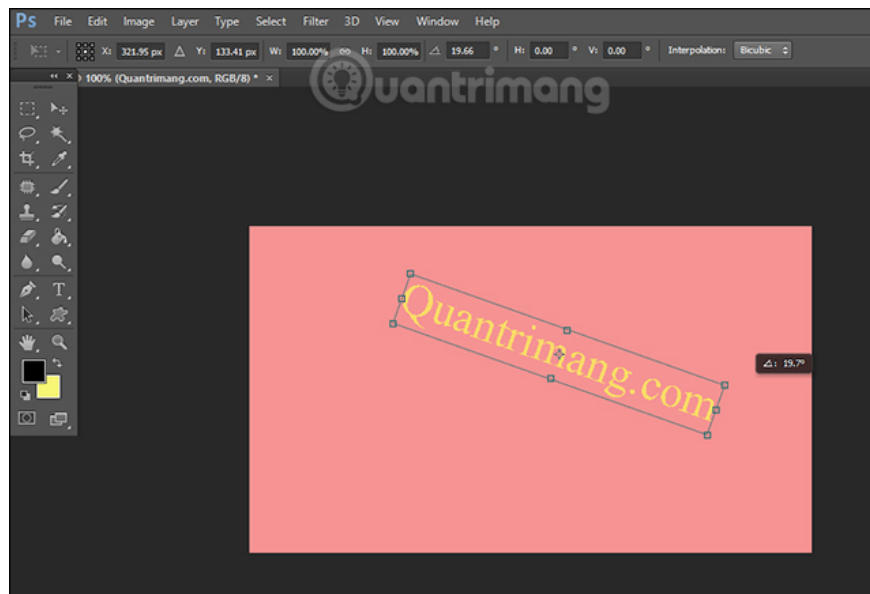

Step 5:

To rotate the text in the direction you want, click on the **text layer** and then press **Ctrl + T** to use the Free Transform feature. Then surround the content as the frame below.

Next, move to the text box and rotate the text to the direction you want.

Rotating text on Photoshop, changing the direction of the text is very simple. Photoshop has built-in vertical direction change tool or users automatically rotate according to the direction they want. If the text after changing the direction is overflowed from the image, you can change the length or distance between the letters again.

I wish you all success!
