

How to rotate the screen and webcam with Apowersoft's Screen Recorder

Recording a screen and a webcam video at the same time is something that many people want to do with the purpose of guiding, presenting and video game. This article will show you how to rotate the screen and webcam with Apowersoft's Screen Recorder.

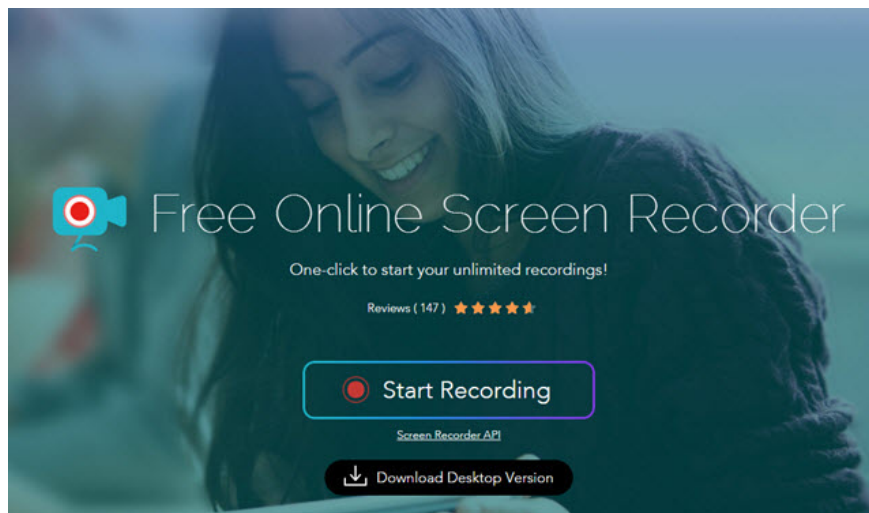

Recording a screen and a webcam video at the same time is something that many people want to do with the purpose of guiding, presenting and video game. This article will show you how to rotate the screen and webcam with Apowersoft's Screen Recorder.

1. Record simple screen videos with Screencastify

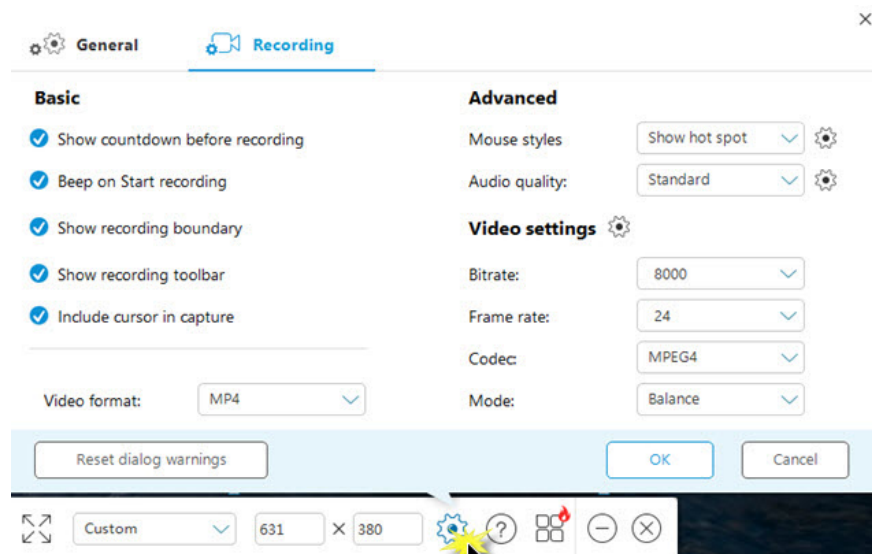

This is a free web-based application that allows you to record anything on your computer, including games, webcams, video chat, live stream, etc. It also provides other audio inputs each other (system sound or microphone) and video formats like MP4, WMV, AVI, FLV, etc. You can also highlight clicks in the record and customize the bit rate, frame rate picture and many other features. Recorded videos can be saved on the drive, shared directly on YouTube or uploaded to Google Drive and Dropbox.

Here are detailed steps on how to record screens and webcams at the same time with this tool.

Step 1: First of all, go to the apowersoft.com website and select the Online Solution section to find Screen Recorder. Then select the '**Start Recording**' button to start the recording process. If this is the first time using this tool, you need to download the launcher to download this application. Don't worry about security because this launcher is quite safe.

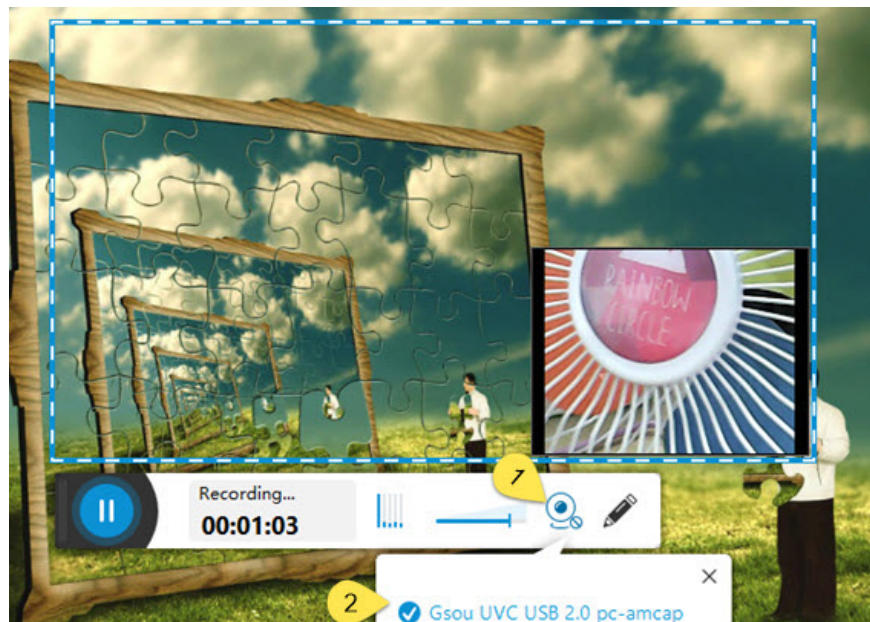

Step 2: Then, a recording frame with a toolbar at the bottom will pop up. You can customize the recording area, save the folder or any other settings for the video.

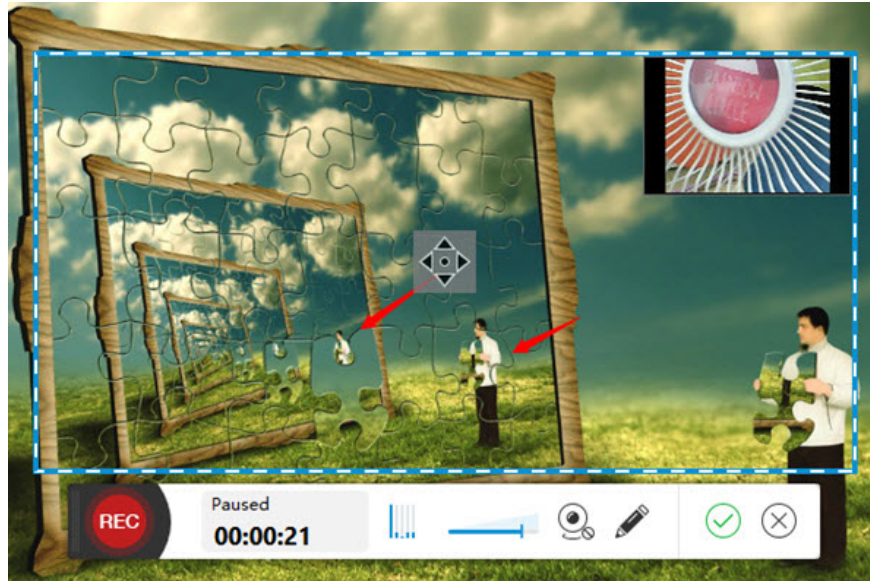

Step 3: Select "Region" mode, press the red "Rec" button to the left of the toolbar and press "OK" to start recording.

Step 4: To record the screen and webcam at the same time, simply click on the camera icon on the recording toolbar and select the camera. After that, the camera will immediately pop up and you can move it to anywhere on the screen.

Step 5: You can also use the pen icon to add lines, arrows and text to the video.

Step 6: Click the blue pause button to pause recording. Then, click the green tick icon to confirm the video save.

Step 7: The video preview will show. Just press the save button on the toolbar below the video window and select the first option to save the video to a file on your computer. Its advantages are free tools and no watermark or recording time. However, it also has disadvantages that you must use online.

This online recording tool also has a professional desktop version with more powerful functions. Besides all the above mentioned functions, this screen and webcam tool also provides editing and video conversion features, screen capture, automatic screen recording scheduling, etc.

I wish you all success!
