

How to rotate the screen on iPhone and Android

Turning off screen rotation automatically on iPhone and on Android will help you to rotate the screen automatically when you use it

Most smartphones now default to auto-rotate mode, this mode is very convenient when you watch videos or play games. But when operating normally like surfing the web, watching news on Facebook, texting with the auto-rotate screen is very annoying.

This rotating screen lock feature can be turned off right in the status bar and your phone control center. If anyone does not know how to turn it off, then QuanTriMang will show you how to turn off the screen rotation on your phone.

1. Turn off screen rotation on iPhone

On your iPhone screen, swipe from the bottom up to open the **Control Center** , then click the screen rotation lock icon. I am using iOS 11 and above so the interface will look like this.

2. How to turn off screen rotation on Android phones

With Android phones, the way off will be slightly different than on iPhone phones, because Android phones are not the same interface as the iPhone of iOS. However, users can still turn off the screen rotation automatically on Android phones in the status bar.

Below, the picture on the left is Samsung's status notification bar interface, you just need to swipe down from the screen and click Auto Rotate, if the blue switch icon is active.

As for the picture on the right is the MIUI interface of the Xiaomi phone line, you still manipulate the top pull down and click the icon **Turn Off** , if it turns green it is okay.

The screenshot shows an Android quick settings panel with a grid of 12 icons. The icons are arranged in three rows and four columns. The first row contains: 'Dữ liệu di động' (Mobile data), 'Wi-Fi', 'Đèn flash' (Flashlight), and 'Tắt tiếng' (Mute). The second row contains: 'Bluetooth', 'Độ sáng tự động' (Auto brightness), 'Tiết kiệm Pin' (Battery Saver), and 'Chế độ máy bay' (Airplane mode). The third row contains: 'Màn hình khóa' (Screen lock), 'Tắt xoay' (Rotation Lock), 'Chế độ đọc sách' (Reading mode), and 'GPS'. The 'Tắt xoay' icon is highlighted in blue, and a red arrow points to it from below. Below the icons, there is a section for storage usage: 'Hôm nay: 428,6MB' and 'Tháng này: 428,6MB'. At the bottom of the panel, there is a brightness slider.

A horizontal brightness slider bar with a sun icon on the left and a moon icon on the right. The slider is currently positioned at approximately 25% brightness.

The following is the interface of the phone with **Android One** operating system **Google** , and still manipulates the status bar down and click **Auto-rotate**.

A special feature of Android is that you can lock two-way screens, ie you can lock when the screen is in vertical or horizontal orientation.

You can turn off the screen rotation lock, tilt the phone when it rotates horizontally, then turn on the lock to turn the screen up.

So your screen will be locked in horizontal format too.

How to turn off the automatic screen rotation is generally very simple because currently the icon to turn off the screen rotation is put into the **Control Center** or in the status notification bar. But because many people do not pay attention, the screen still automatically rotates as default.
