Are RAR files safe?

RAR, Zip,. files are compressed files with one or more files inside. They can contain text documents, images, videos, and many other types of files. The only difference between RAR files and ZIP files is the compression method used by each file, which is why Macs can open ZIP files but not RAR files.

In fact, RAR files may contain unsafe content. Therefore, if you trust the source of the RAR file, it is safe to **learn how to open rar files on mac** . However, if you're not sure where the RAR file came from or who compressed it in the first place, the files within may contain malware.

As a general rule, you should avoid opening any file from an unknown source, even if it is a Rar file you are trying to extract.
