Life is growing, smart devices are more and more widely used in every family, making our lives become more relaxed and comfortable, but these devices lead to obsession. photos from the family's electricity bills are soaring. However, if you know how to use it properly and apply some other simple tips, you can control and **save a significant amount of power consumption**. Here TipsMake.com please send you some tips to help **save electricity bills** .

1. Turn off the stove a little earlier

If you use an induction cooker or an infrared stove when you cook food, you should turn off the stove a little earlier, no need to cook too much, because when you turn off the stove, the heat on the stove will still be enough for them to Make your food pot cooked. While this tip may apply to most dishes, there are exceptions, such as stewed or stewed, that we will need to cook a bit.

2. Do everything after 9pm

If you need to use water or use a washing machine, dishwasher . things related to electricity use are best to use them after 9pm, this time the electricity will be much stronger than the peak hours and thicken Especially, you can **reduce the cost of electricity** when using it during this time, because when the power is stronger, all devices will operate faster to help you save up the electricity bill.

3. Use a ceiling fan

Using a ceiling fan can help circulate indoor air, and make sure your attic is well ventilated. Especially when using a ceiling fan it can reduce the room temperature to 10 degrees and only consume 10% of electricity compared to air conditioning.

4. Unplug the power plug when not in use

Unplug any power devices without using especially computers, TVs and VCRs . when the device is not in use, we should unplug the outlet from the power supply, because if you still leave it as then they are still active and consume a significant amount of your family's electricity.

5. Replace inefficient devices

In our family when devices such as light bulbs, televisions or refrigerators . when used for too long or those devices consume too much power, it is best to **replace them with economical devices.** more **power** . For example, if your family's air conditioner has been used for more than 10 years, it's best to replace it with a new air conditioner that will be more effective and will cut your summer electricity bill by about a third.

6. Use energy-saving light bulbs

The US Department of Energy says LEDs save about 75% of energy and have 25 times longer life than conventional incandescent lamps. Therefore, to save electricity, it is better to use LED lights. In addition, you do not need to worry about the size of LED lights because currently there are many types of lamps in the market with shapes and sizes like incandescent lamps.

7. Use motion detection device to avoid wasting electricity

If your family members often forget or do not have the habit of turning off electrical devices when not being used, immediately use the **motion detection devices**, this is a suitable and energy-saving solution. significant. The way this device works is also extremely simple, it will automatically detect human movements when entering the room, the power will immediately light up without us needing to switch to turn on, and it will turn off when we get out of there. The US Department of Energy said the use of motion sensors could cut waste power by up to 30%.

8. Use cold water

If the weather is not too cold, you can wash and wash dishes with regular water instead of using a hot water bottle or washing machine. This can save a significant amount of money each year on electricity bills. Not only does it save electricity, but it also helps your body act as a light exercise to make your body more comfortable.

9. Use a dishwasher

Dishwashers use electricity but it saves energy, money, water and time than hand washing. According to the California Energy Commission, using a dishwasher helps you save an average of 5,000 liters of water and 230 hours of your valuable time each year. Besides, instead of using the automatic drying function, you can **let the dishes dry naturally to save electricity**.

10. Adjust the water jet mode of the faucet

If you **adjust the taps, showers to a small** , slower **water mode** and take a bath for 15 to 20 minutes instead of a little faster showering but more water, this will help save Save a significant amount of clean water and electricity every month for your family.
