

# How to save a location on Google Maps from a screenshot

The screenshot scanning feature in Google Maps lets you easily save locations from your photos.

The screenshot scanning feature in Google Maps allows you to easily save locations from your photos. All you need to do is take a screenshot with the name or address of the location displayed. The Google Maps app then identifies and extracts the information and adds it to a list in the app. Here's how to save a location on Google Maps from a screenshot.

## Instructions for saving locations on Google Maps from screenshots

Note, this feature is currently only available in the US and only applies to the iPhone version of Google Maps.

### Step 1:

You **take a screenshot** of the location, location in any interface. Then open the Google Maps application to see the new screenshot, **click Review** to view the image.
