

How to schedule sending messages, email, posting Facebook, Twitter for Android phones

On certain holidays or anniversaries you often wait to send a message for the desired time or sometimes need to send an important email at 8 am the next morning, but worry about not doing it on time. So how to solve this problem? TipsMake.com will help readers solve this problem through the article below.

On certain holidays or anniversaries you often wait to send a message for the desired time or sometimes need to send an important email at 8 am the next morning, but worry about not doing it on time. So how to solve this problem? Very simple optimal plan in this case is the smartphone timer to automatically help you.

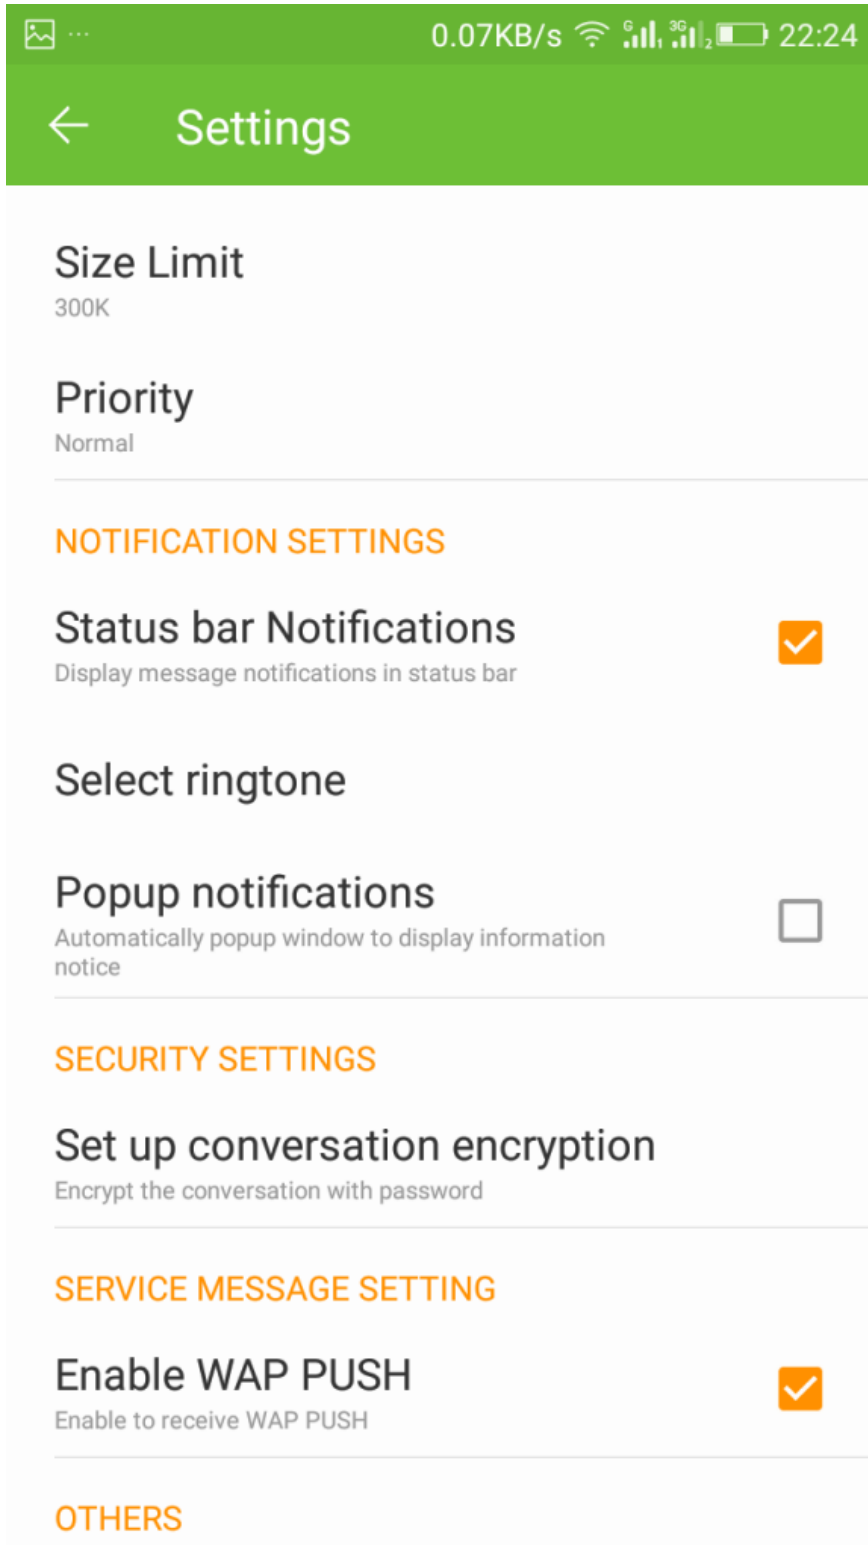

To automatically send messages or emails at the time you have scheduled it, the reader needs to use a 3rd application for his Android device, specifically in this article TipsMake.com will introduce support The most useful and useful player is the Schemes application - Scheduled Networking.

1. How to schedule music off on Zing MP3
2. How to automatically open a website at a specific time
3. How to timer off Windows 10, Windows 8/7 / XP automatically

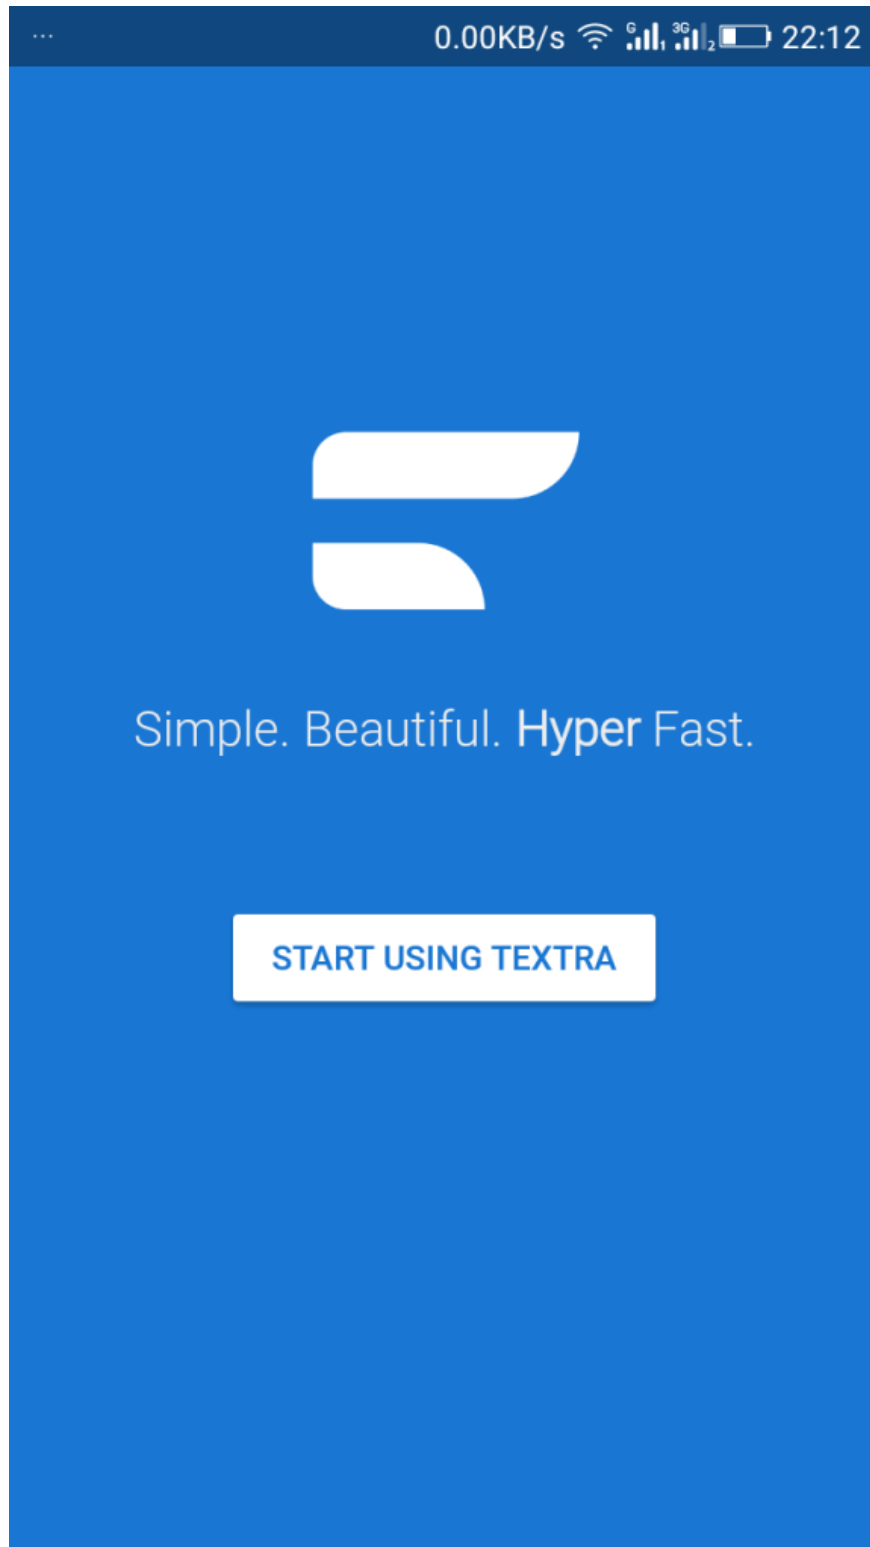

1. Timer sending Android messages with Textra SMS

You can do that with third-party applications. Follow these steps to schedule SMS messages.

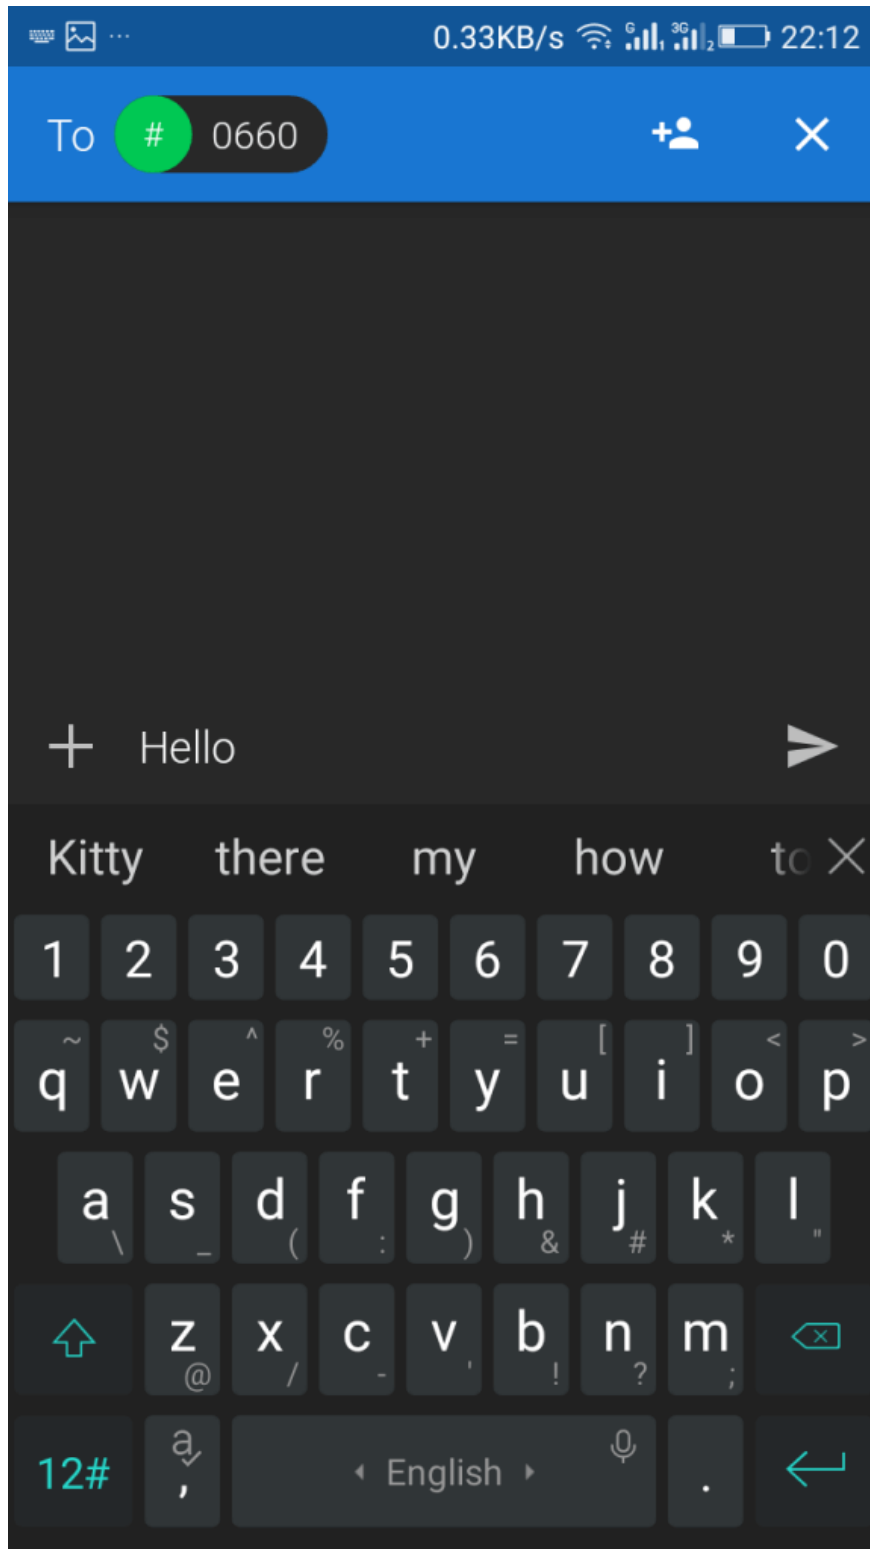

First of all, you need to disable Android's default messaging app notification or you'll get two notifications for new messages. Access **Settings -> Sounds & Notification -> App Notification ->** Turn off message application notifications

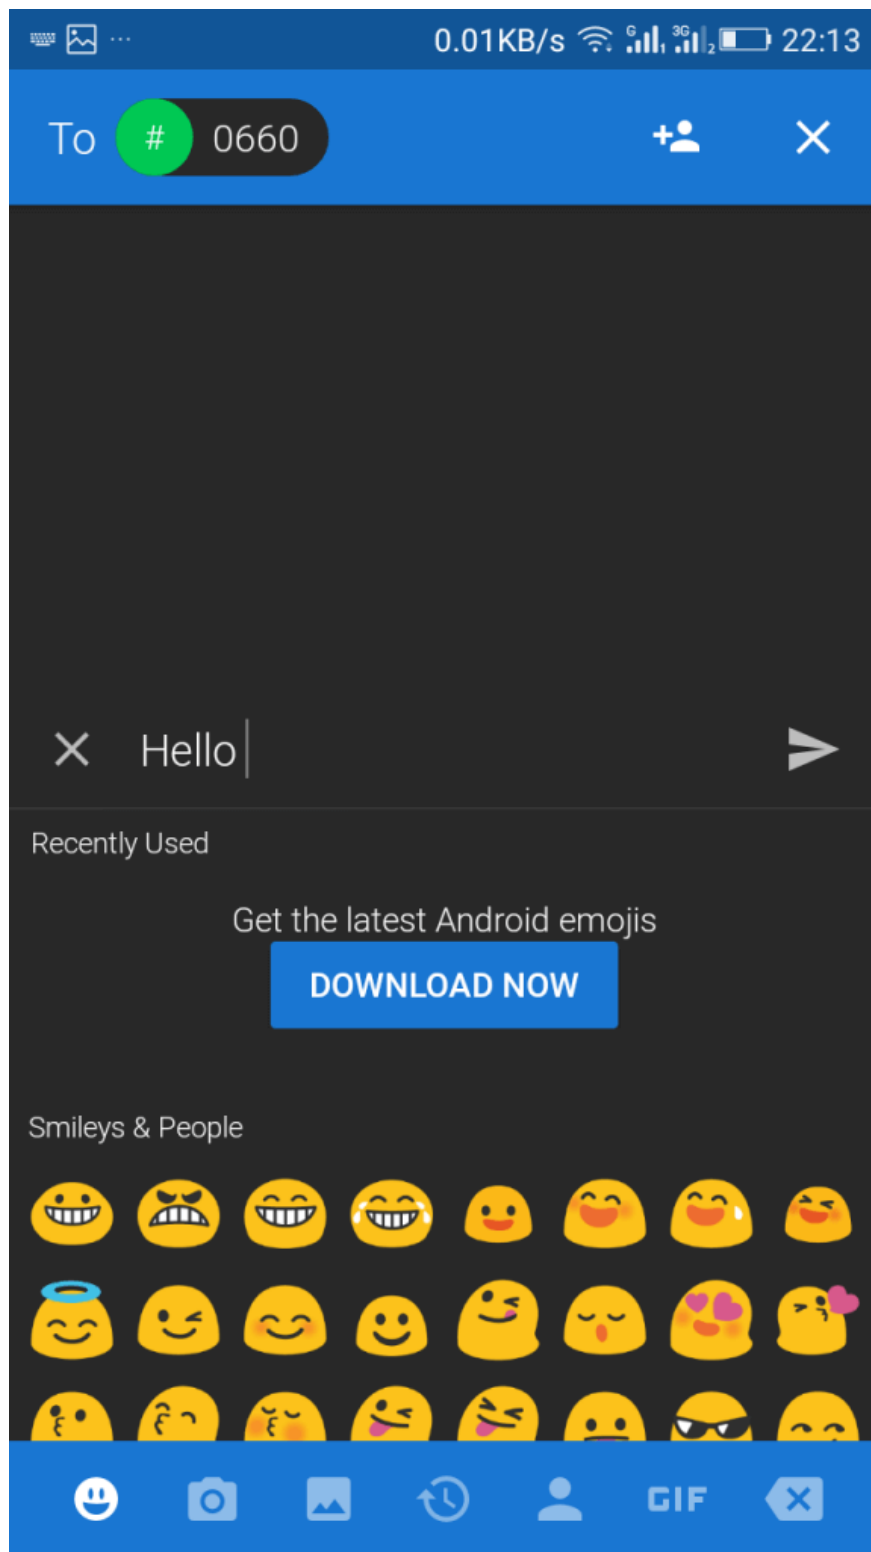

Download and install Textra SMS application.

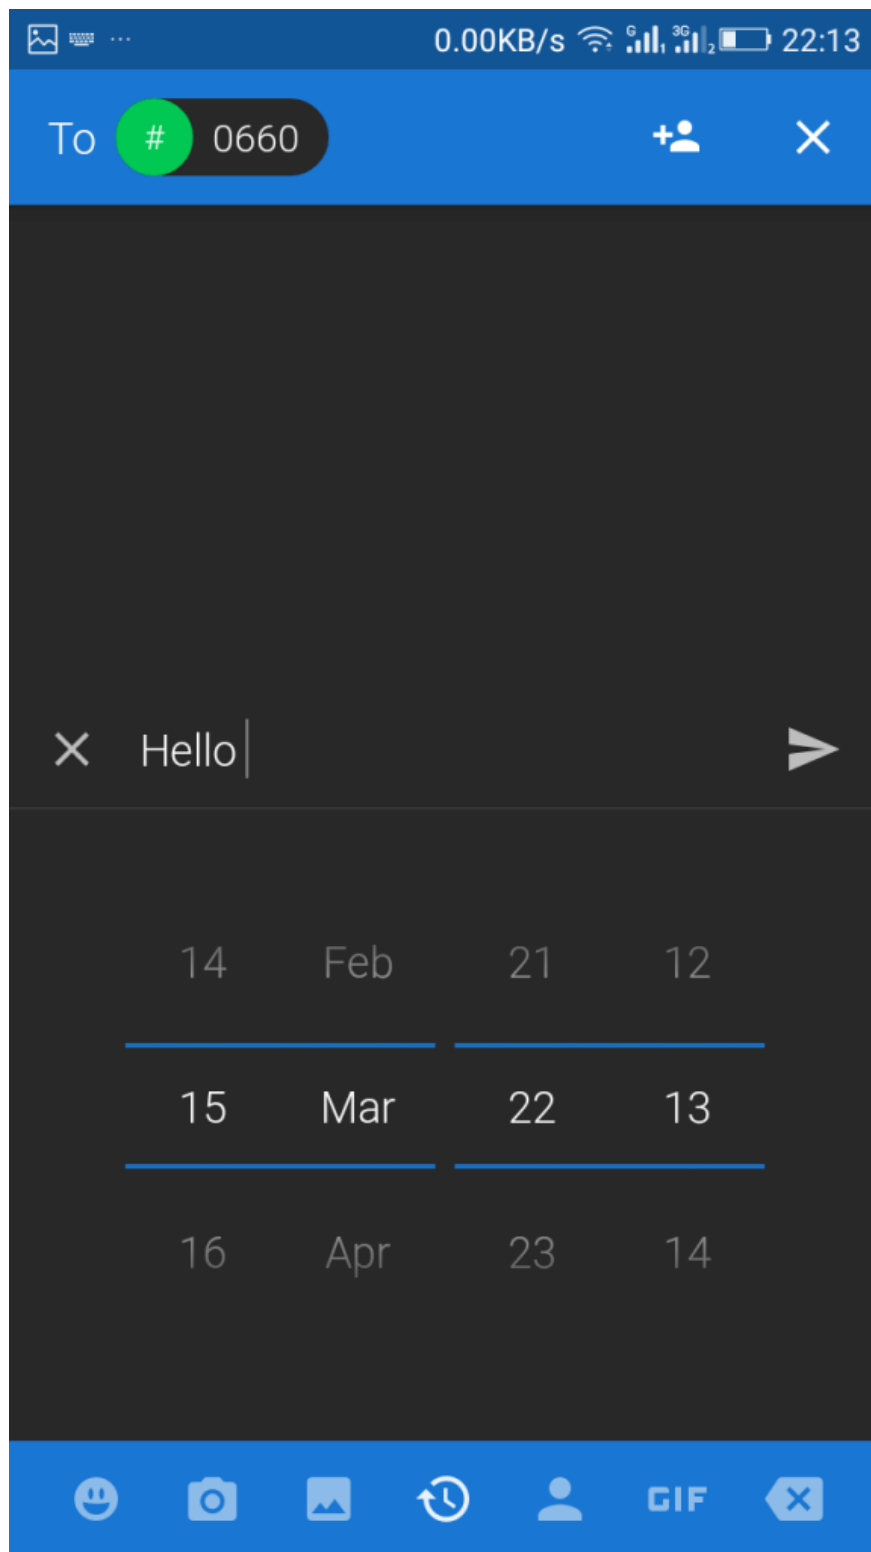

Now open the application, write the message and select the recipient.

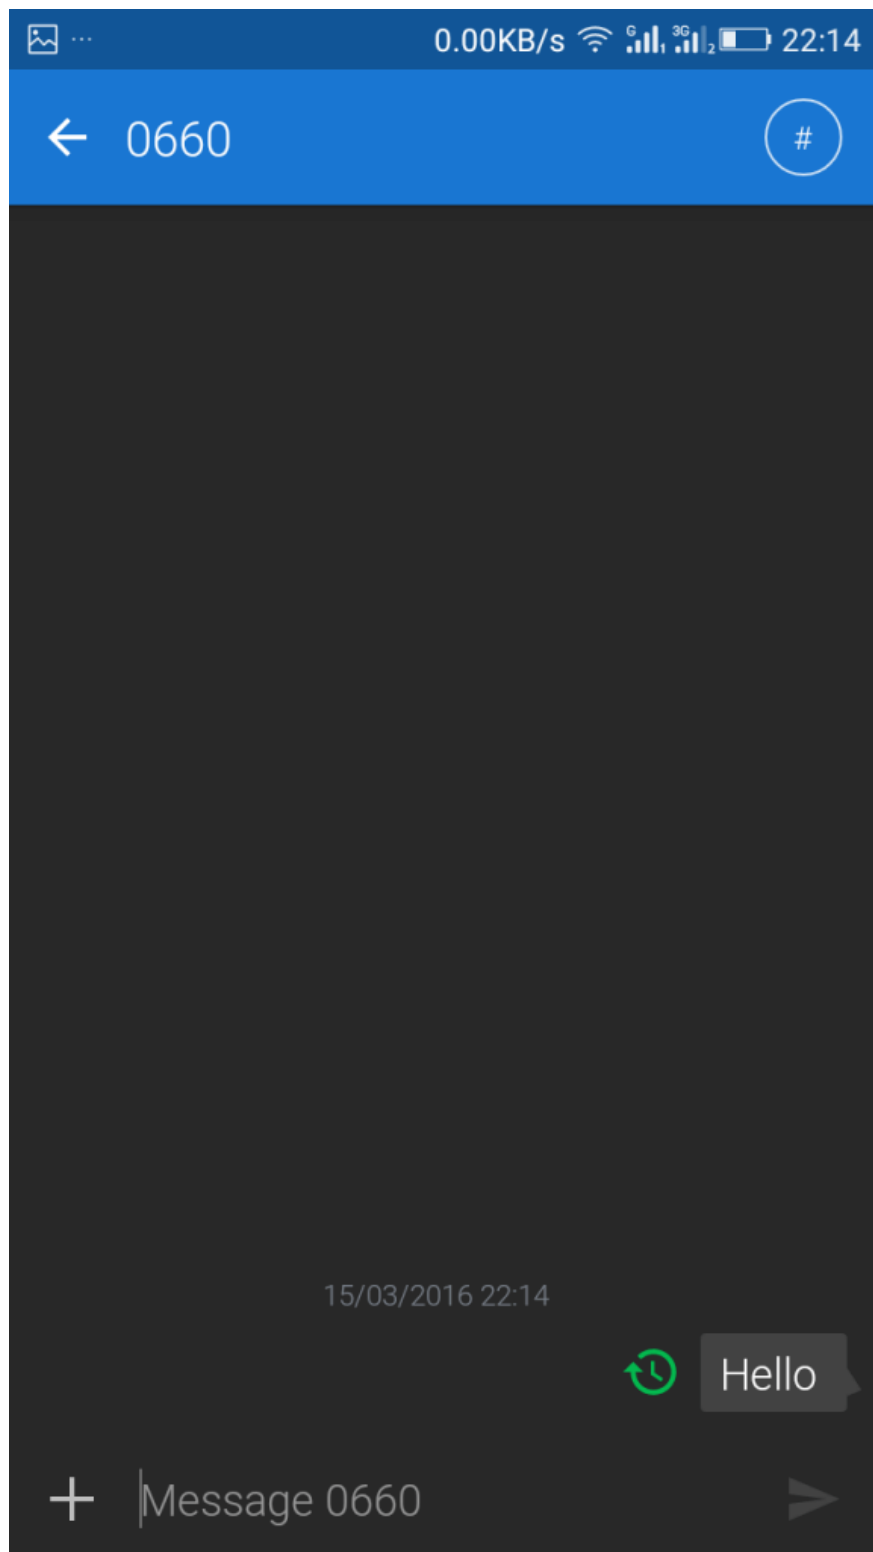

Click the plus sign below the keyboard, then click on the clock icon.

Set the time to send the message, then click the send button or arrow.

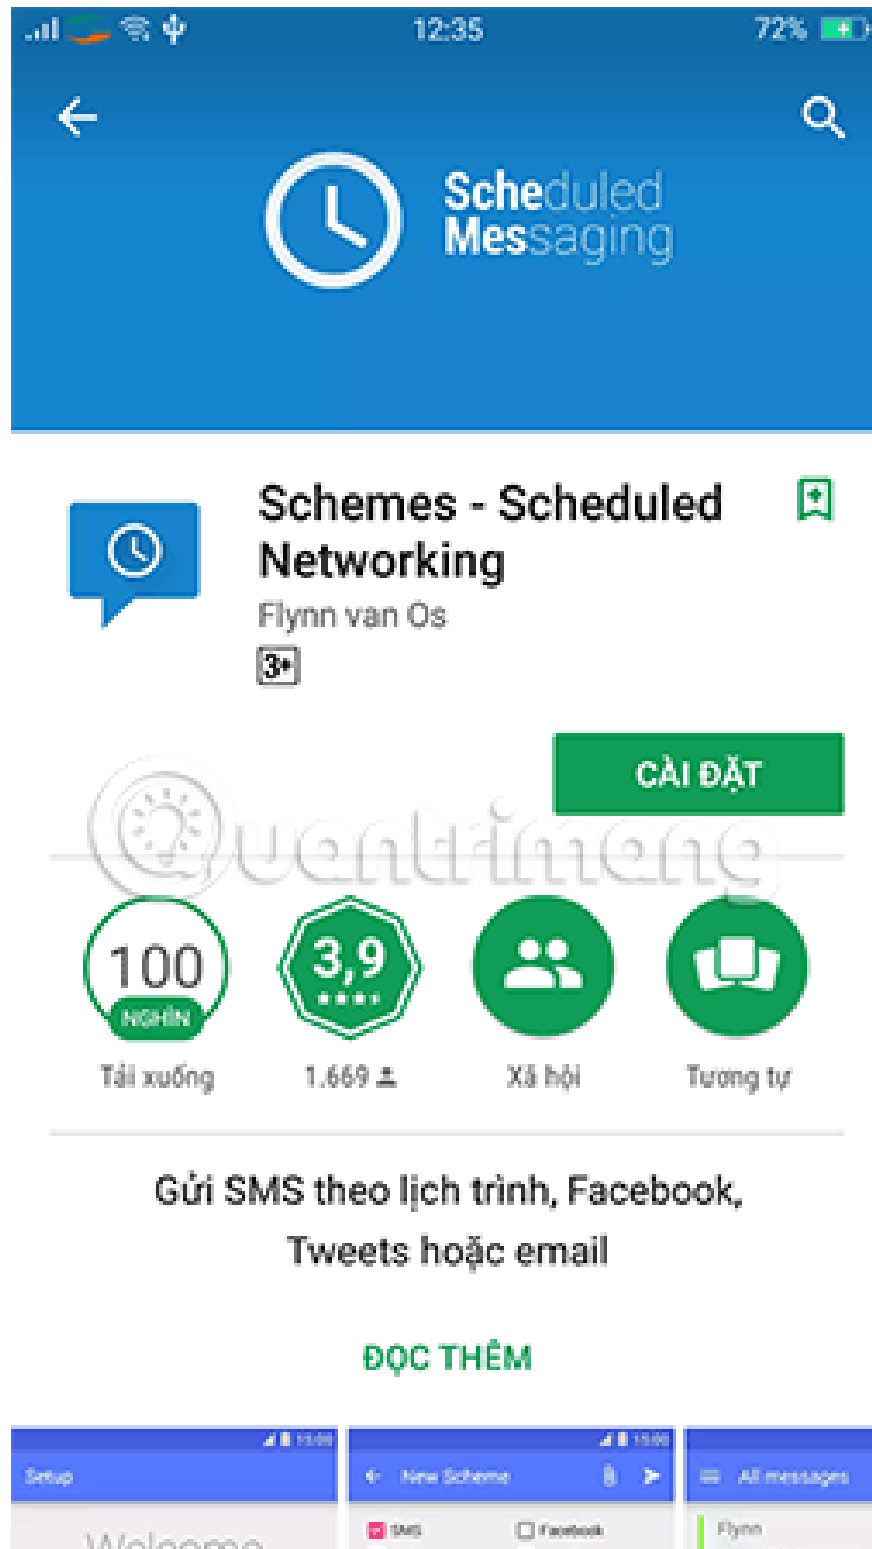

Once completed, your message will automatically be sent to the recipient after the scheduled time.

2. Download Schemes application - Scheduled Networking for Android phones

1. Download the Schemes app for Android.

Schemes - Scheduled Networking is a completely free application, allowing users to schedule a timer for Android phones to automatically send messages, email, write status on Facebook or Twitter on a selected date

and time. Users just need to draft the message content (email), select the recipient's address, then schedule the application to automatically perform.

3. Guide to sending messages, Email, post Facebook and Twitter posts for Android phones

Step 1: Access the application.

After you have downloaded and installed successfully, the application will require users to log into their Facebook, Twitter or Gmail account during the first use to be able to post on an appointment. As for SMS, you will not need to log in to your account. You can click the 'Log In' button to log in to the corresponding account, or press the 'Skip' button to skip and log in later to these accounts when needed.

When logging in the application will require access to certain rights on your smartphone, you need to grant permission for the application to work. This still ensures the safety and security of the account, so don't worry, please allow access.

Step 2: Select the tab you want to schedule.

Next on the main screen interface you will see a new creation icon at the bottom right of the screen. Now click on it and select the tab you want to schedule. You can choose SMS to send a simple text message, Facebook to upload content to Facebook, Twitter to update content to Twitter or bookmark Gmail to send email.

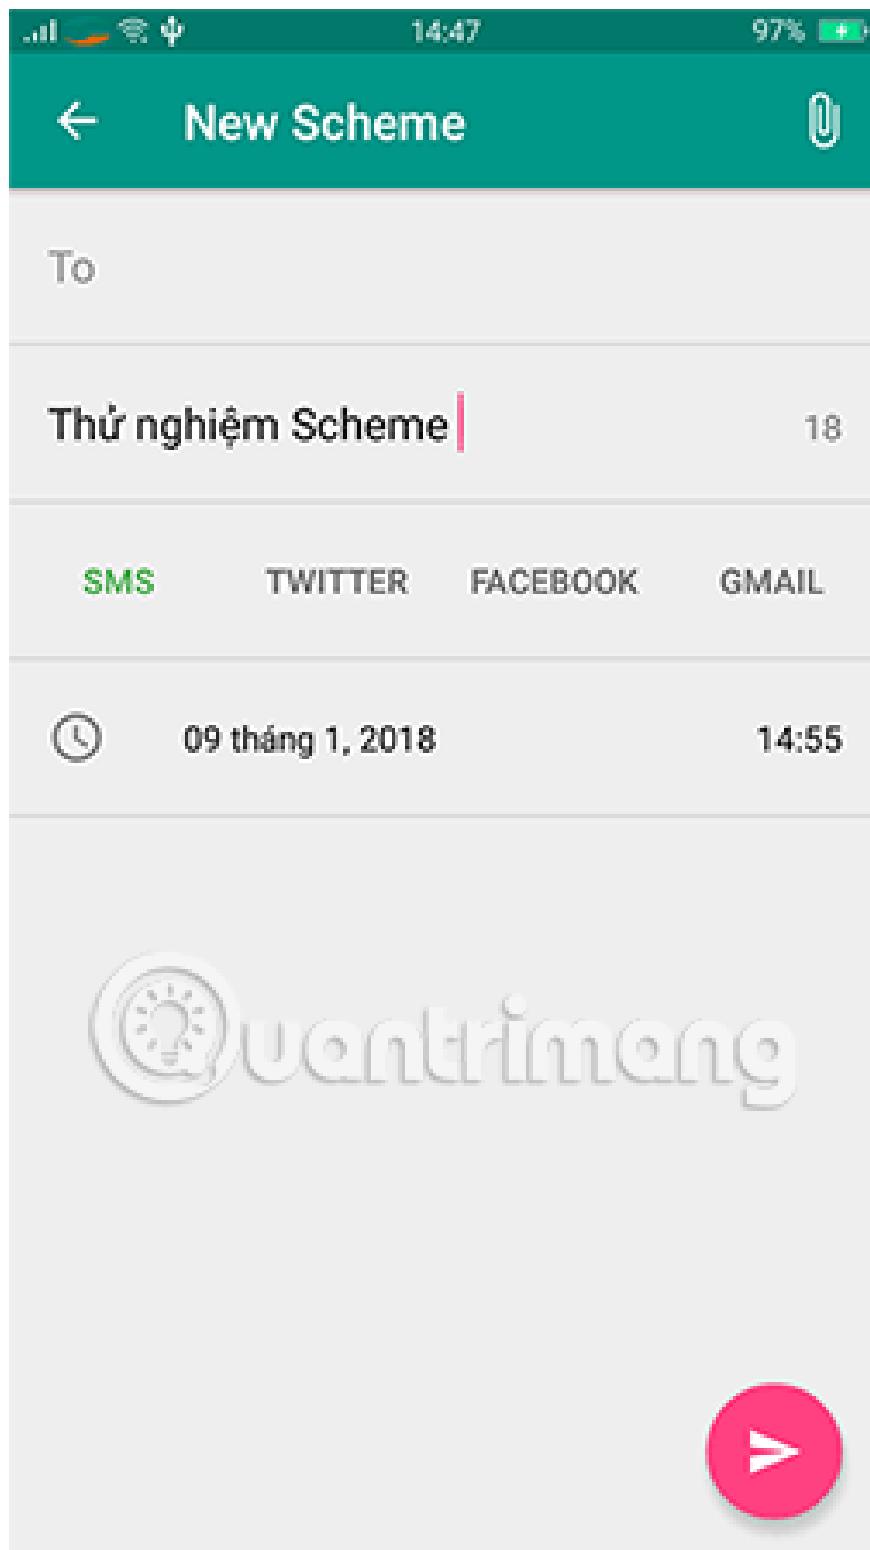

Step 3: Enter content and schedule.

1. In the "To" section, enter the phone number or enter the recipient's name stored in the directory for SMS (can be sent to one or more people) to send the message. For the Gmail section, you must enter the recipient address in the 'To (Gmail)' and 'Subject' fields to enter the title for the email.

2. The "Message" section compiles the content to be sent (SMS or Email content). This is the same website that will be posted on the Facebook page if you check the Facebook option.

1. Set the calendar date and time to send messages (SMS), email or update content to Facebook and Twitter.

Step 4: Confirm and send.

After completing the setup steps, click the arrow icon in the lower right corner of the screen to confirm and schedule messages and posts. You can review the message content, email, or Facebook post waiting to be sent on the main interface of the application.

Step 5: Enjoy the results.

Automatically up to the scheduled time frame, the application will perform the task you have scheduled. For example, the image below shows that posting for Facebook that we have just worked on has been scheduled on time.

Note: In order for Facebook, Twitter, or message and email posts to be sent successfully at the scheduled time, your phone needs a stable internet connection at that time.

In addition, you can also use the Do it Later app, Schedule SMS or SMS Planning to schedule sending messages on Android.

The above is a simple way to help you schedule sending messages, emails, posting on Facebook, Twitter quite interesting and convenient. In this way, you can now compose the content you want immediately and schedule it to automatically send the message to the right address, exactly the time without losing notes. Please experience immediately and share with friends and relatives together.

Having fun!
