

# How to see 3D animals on Google

See 3D animals on Google Search is a new feature that helps you show animals in different spaces.

Surely you remember the Animal 4D application showing the famous 4D animal. And Google has also added augmented **reality (AR) features to Google Search** , with a range of different animals for you to see right on your phone. Option to see animals in 3D display right in the search results for users to click. The animal is then presented in 3D, and you completely take it anywhere in the space you want. The following article will guide you how to view 3D animals on Google Search.

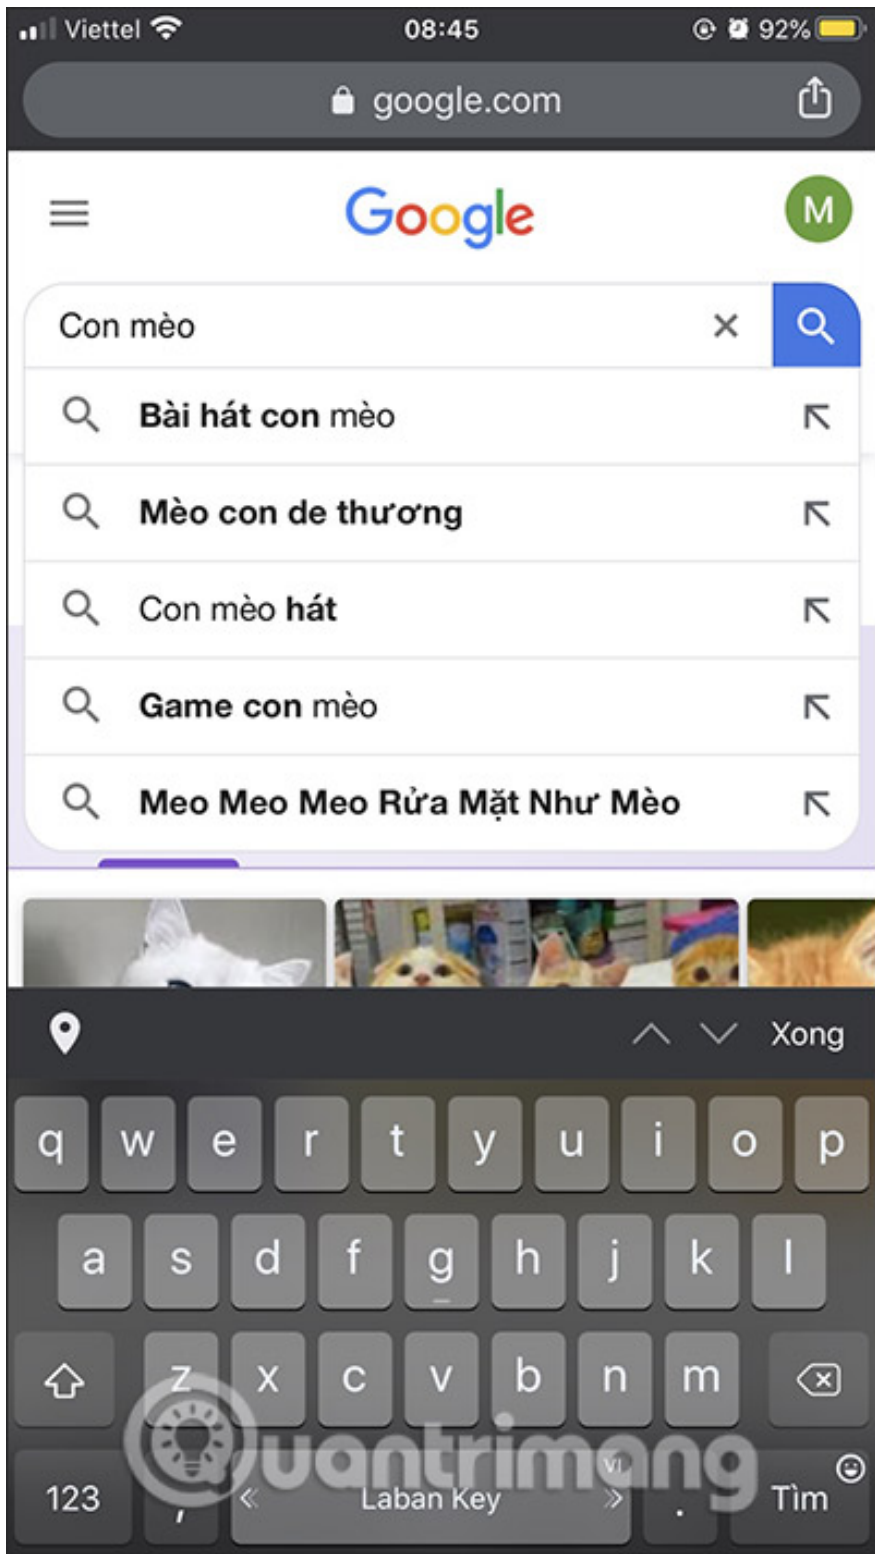

## Instructions for viewing 3D animals on the phone

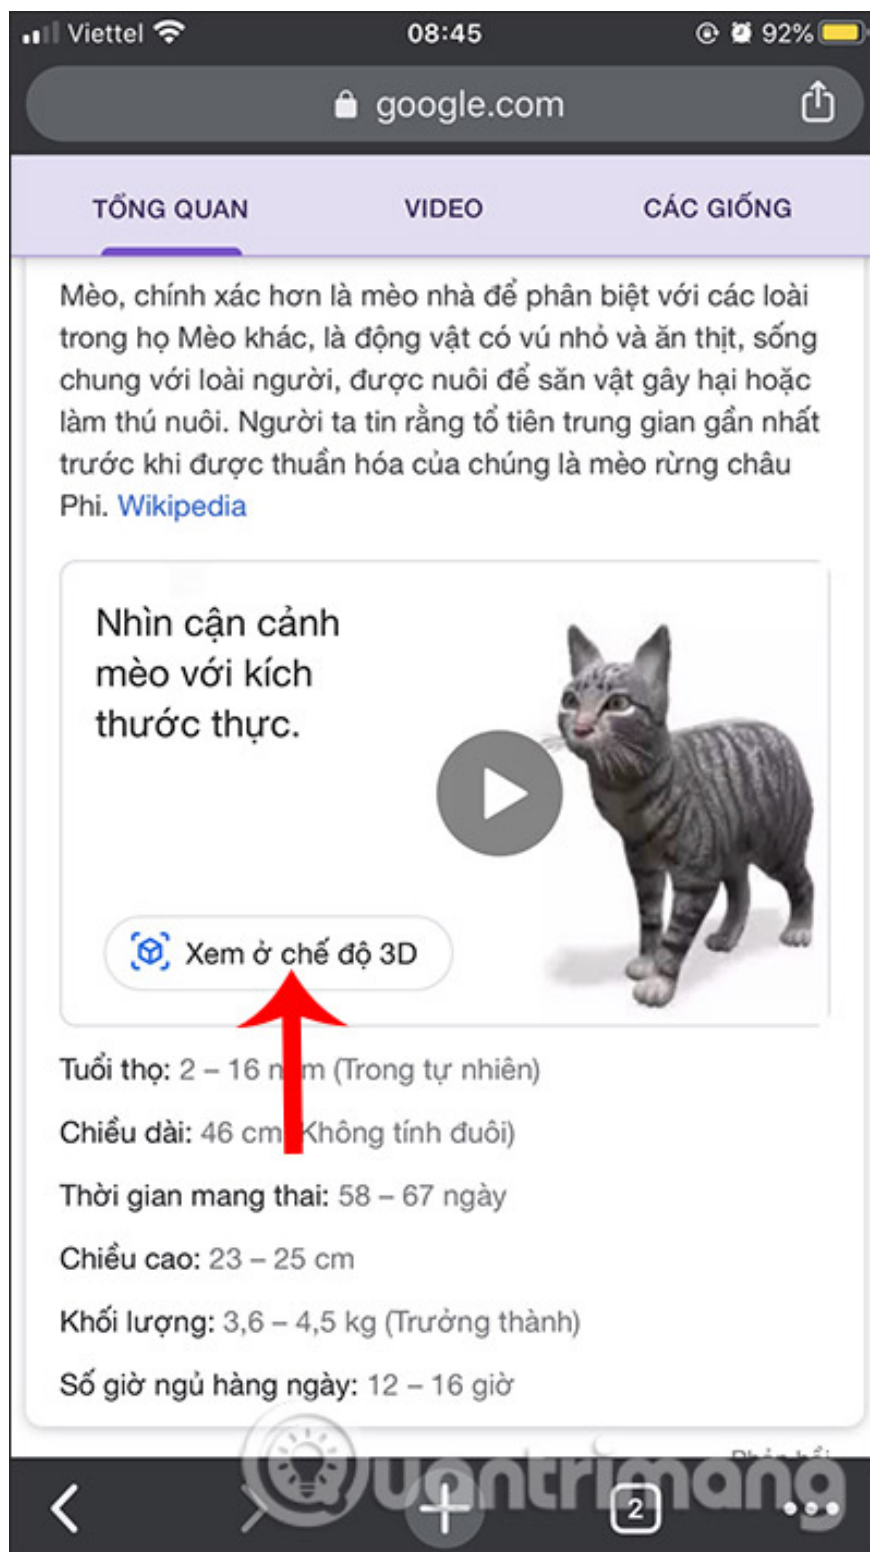

### Note when showing 3D via Google Search

1. Depending on the mobile carrier will support this slideshow feature or not. Android will need 7.0 or higher and iOS runs 11.0 or higher and from iPhone 6S and above.
2. Currently, Google only supports 3D animal displays with some species including lions, cats, dogs, goats, horses, sharks, ducks or you can use English keywords to view 3D animals with many results. more including Alligator, Angler fish, Brown bear, Cat, Cheetah, Dog (Labrador Retriever, Pug, Rottweiler), Duck, Eagle, Emperor penguin, Giant panda, Goat, Hedgehog, Horse, Lion, Macaw, Octopus, Shark, Shetland pony , Snake, Tiger, Turtle, Wolf.

### Step 1:

The user first accesses **the Google Search tool** and **searches for the keyword cat** . When the search results and look down there will be a close-up view of the lion with the actual size, click **View in 3D** .

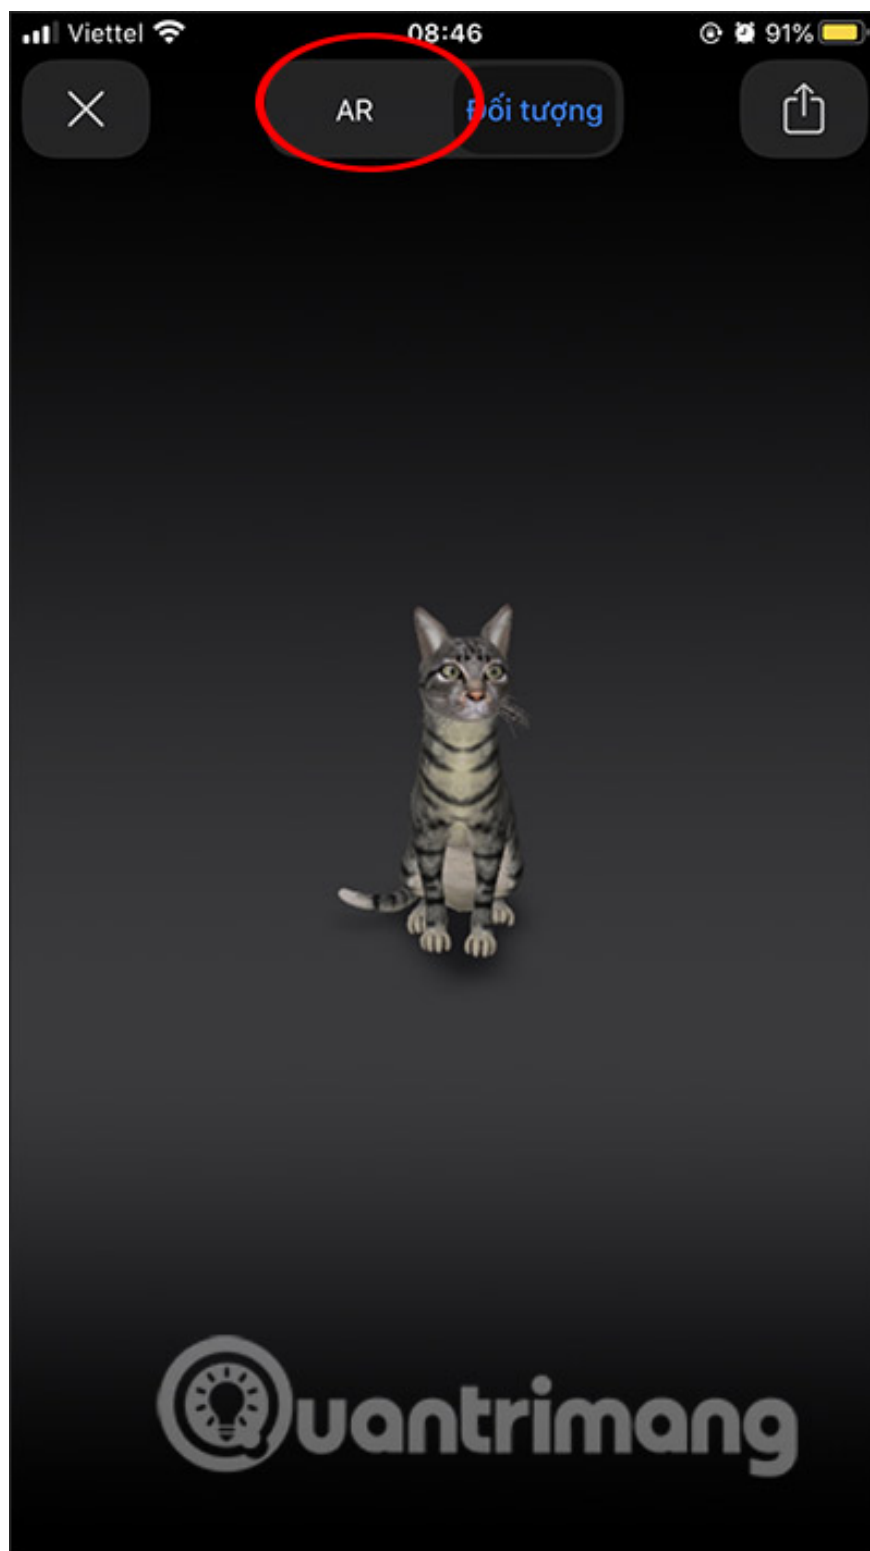

## Step 2:

For some devices, you need to click View more in space to display the animal in 3D, some devices will not have this message as with the iPhone in this article.

**Click AR** to switch to see virtual reality mode. As a result, you will see the animal display with its real shape as shown below. We can zoom in or out of the animal to see and move every corner if we want.
