How can I see the profile picture of a certain Instagram account that you want? Previously, there was no way to view the profile picture of an Instagram account. You can only access that Instagram account and look at the thumbnail avatar at the top of the interface. However, with this latest Instagram update, users can view Instagram account avatars in full screen mode, and from there decide to download other people's Instagram avatars or not. The following article will guide you to view your Instagram account profile picture.

Instructions for viewing Instagram account avatars

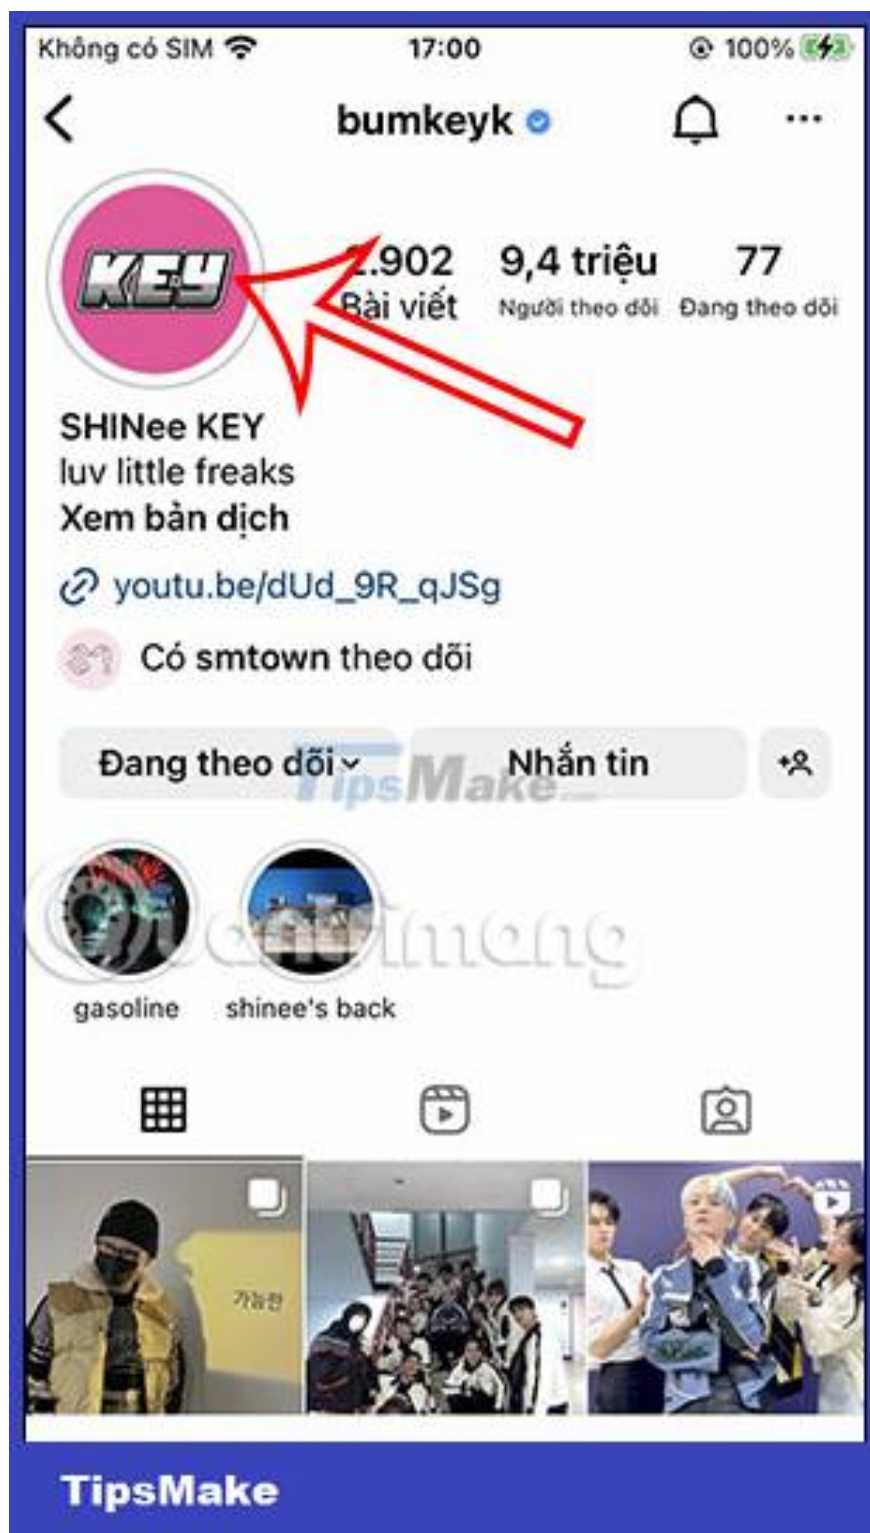

Step 1:

After upgrading Instagram to the new version, you need to access the Instagram account you want to see their profile picture.

Step 2:

At the person's Instagram account interface, we will **press and hold on the thumbnail avatar** in the left corner.

Step 3:

Soon we will see more clearly the profile picture of this Instagram account.

However, Instagram currently does not have the option to re-download this avatar, so it will need a support application or website. If you don't need a photo to download your account image, you can take a screenshot of your iPhone or Android to send it to others, or save it yourself.
