

How to see traffic density on Google Maps

How to see traffic density on Google Maps. Google Maps provides traffic density checking at a time to help us easily select the fastest route to travel.

The map application is an integral part of our electronic devices. Among them, Google Maps is the most popular because it is always growing day by day. This map provides traffic density checking at a time so that we can easily choose the fastest route to travel.

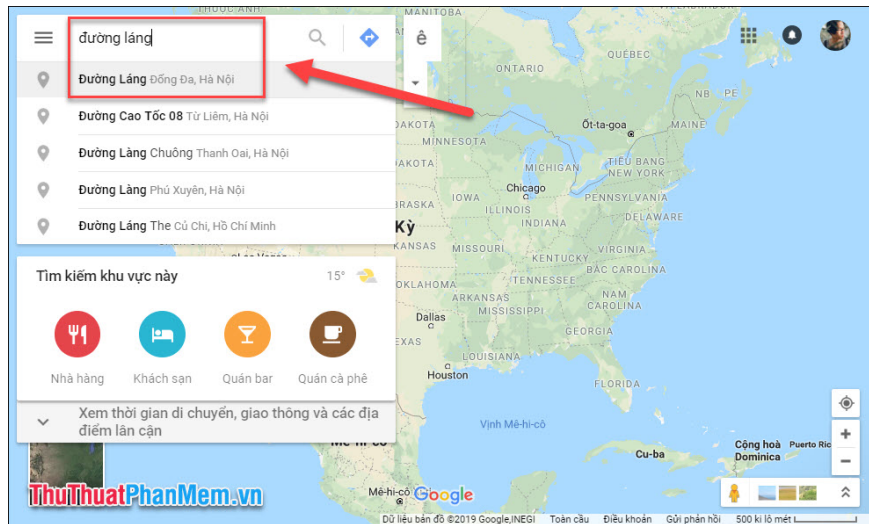

Very convenient, right? Let's discover TipsMake.com how to see how traffic is on Google Maps!

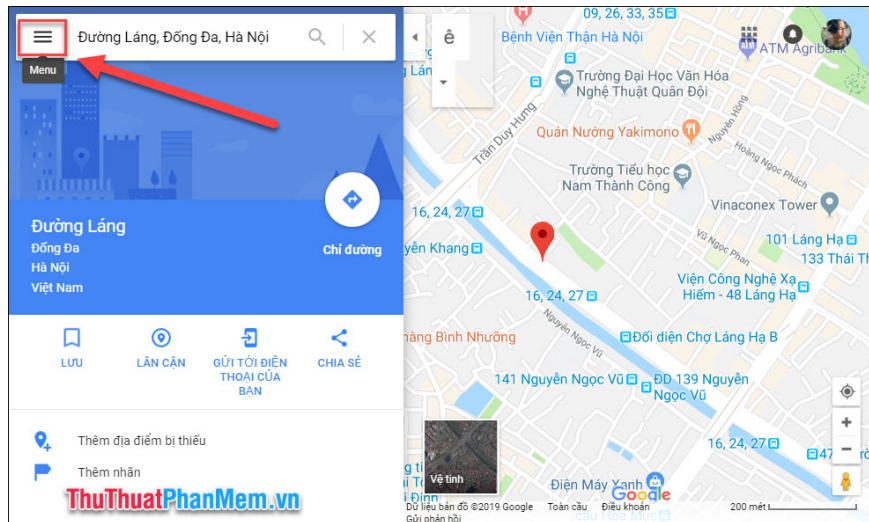

View traffic density with Google Maps on your computer

Step 1: Open your Web browser (Chrome is recommended), visit <https://www.google.com/maps> to use the Google Maps feature.

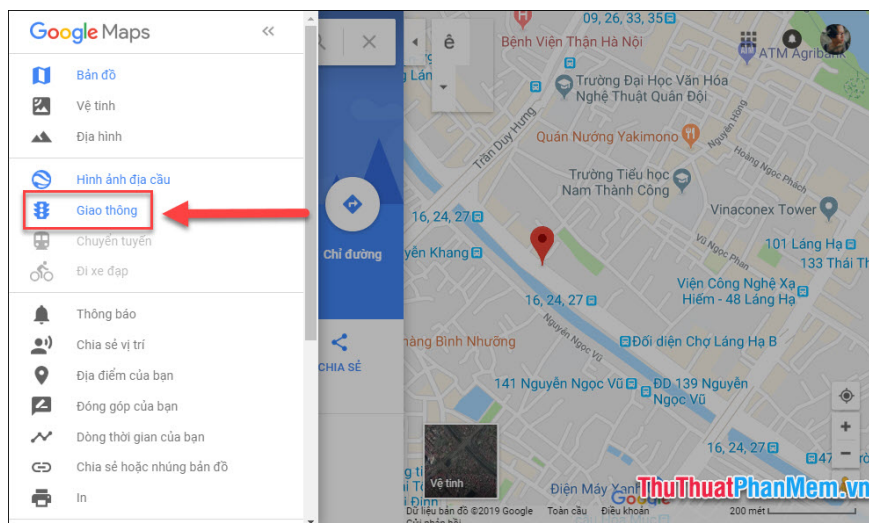

Enter the route, or area you want to research into the search box.

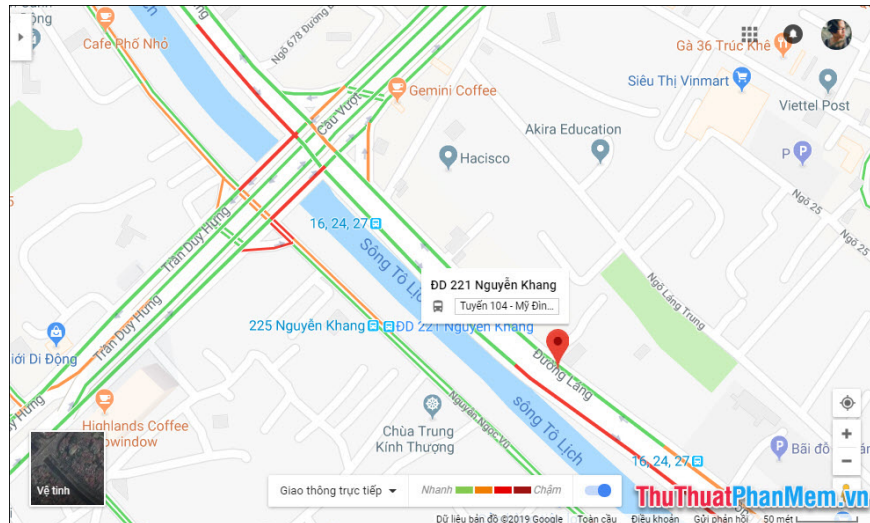

Step 2: Once the location has been determined, select **Menu** (the icon with 3 dashes)

Continue to select **Traffic**.

The map will appear different color bands on each route as follows:

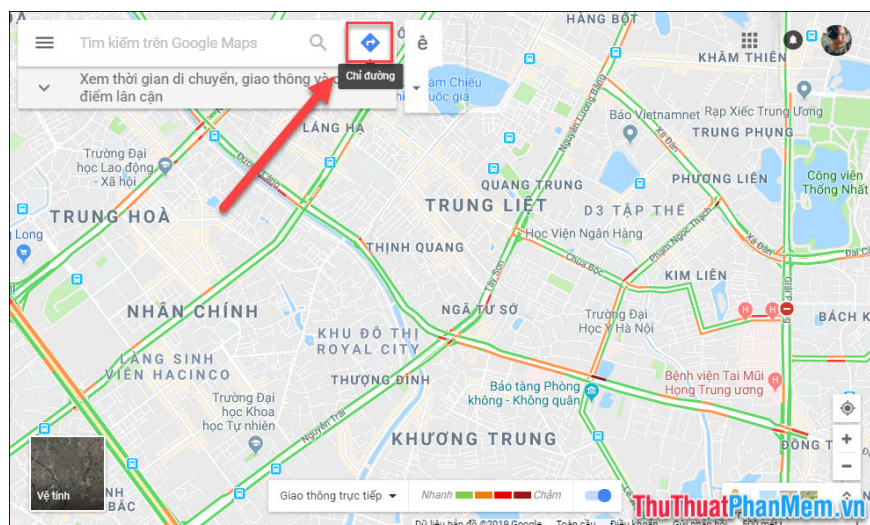

1. Green: Traffic is sparse
2. Orange: Medium
3. Red: East
4. Dark red: Dense, likely to cause high congestion.

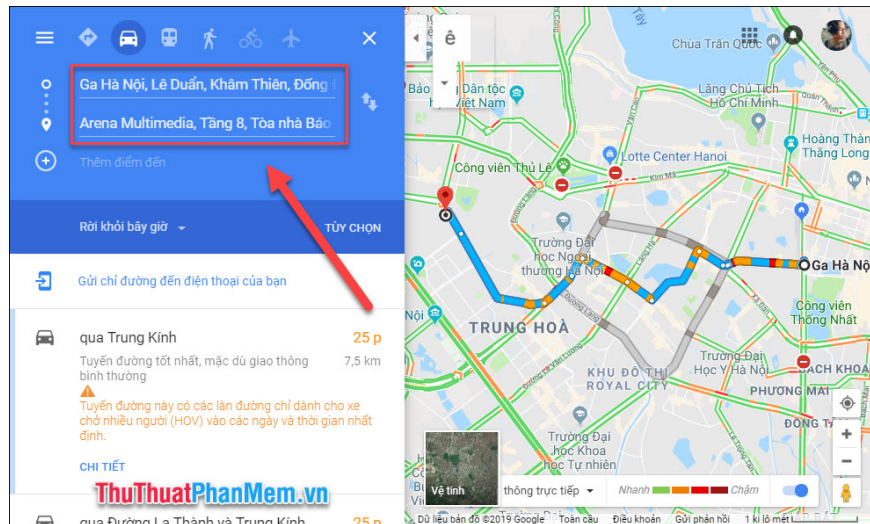

In Viet Nam. This traffic condition is constantly updated so it has a very high accuracy that you can completely trust.

You can also quickly find the appropriate route and know the traffic situation with the **Directions** function :

Select **Directions** in the main interface of Google Maps.

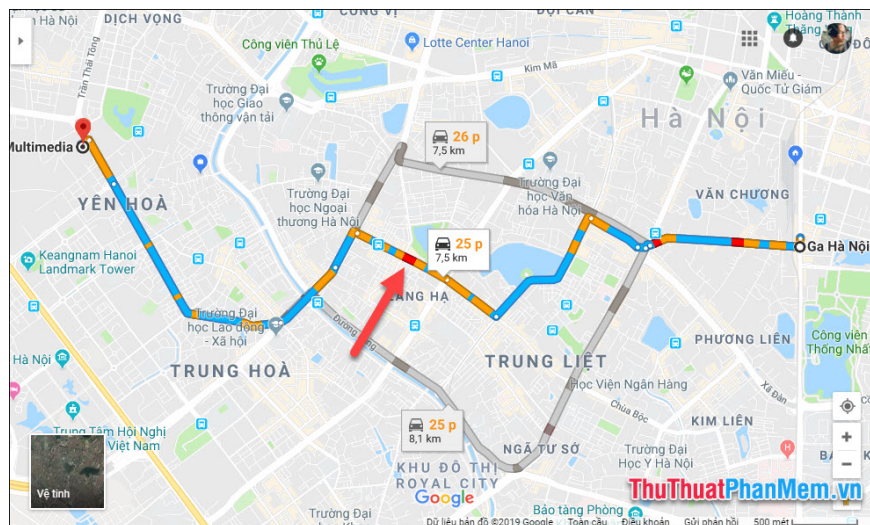

Choose your entry point and destination.

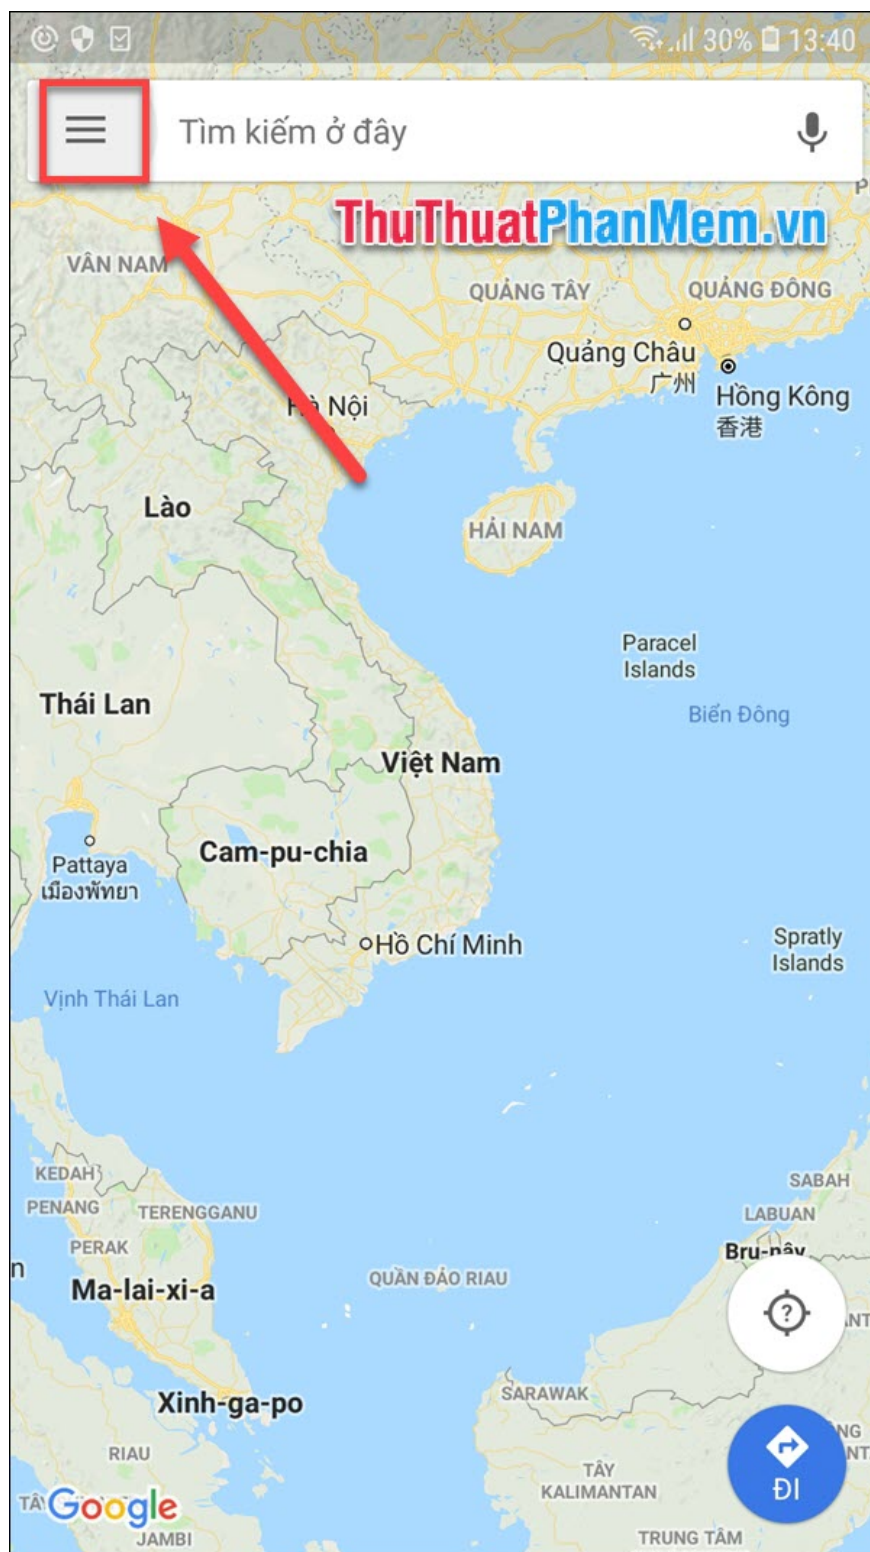

Looking at the route proposed by **Google Maps** , you will recognize that the route has different color segments, showing different traffic conditions:

1. Blue: Route selected
2. Orange: Slow traffic
3. Red: Congestion

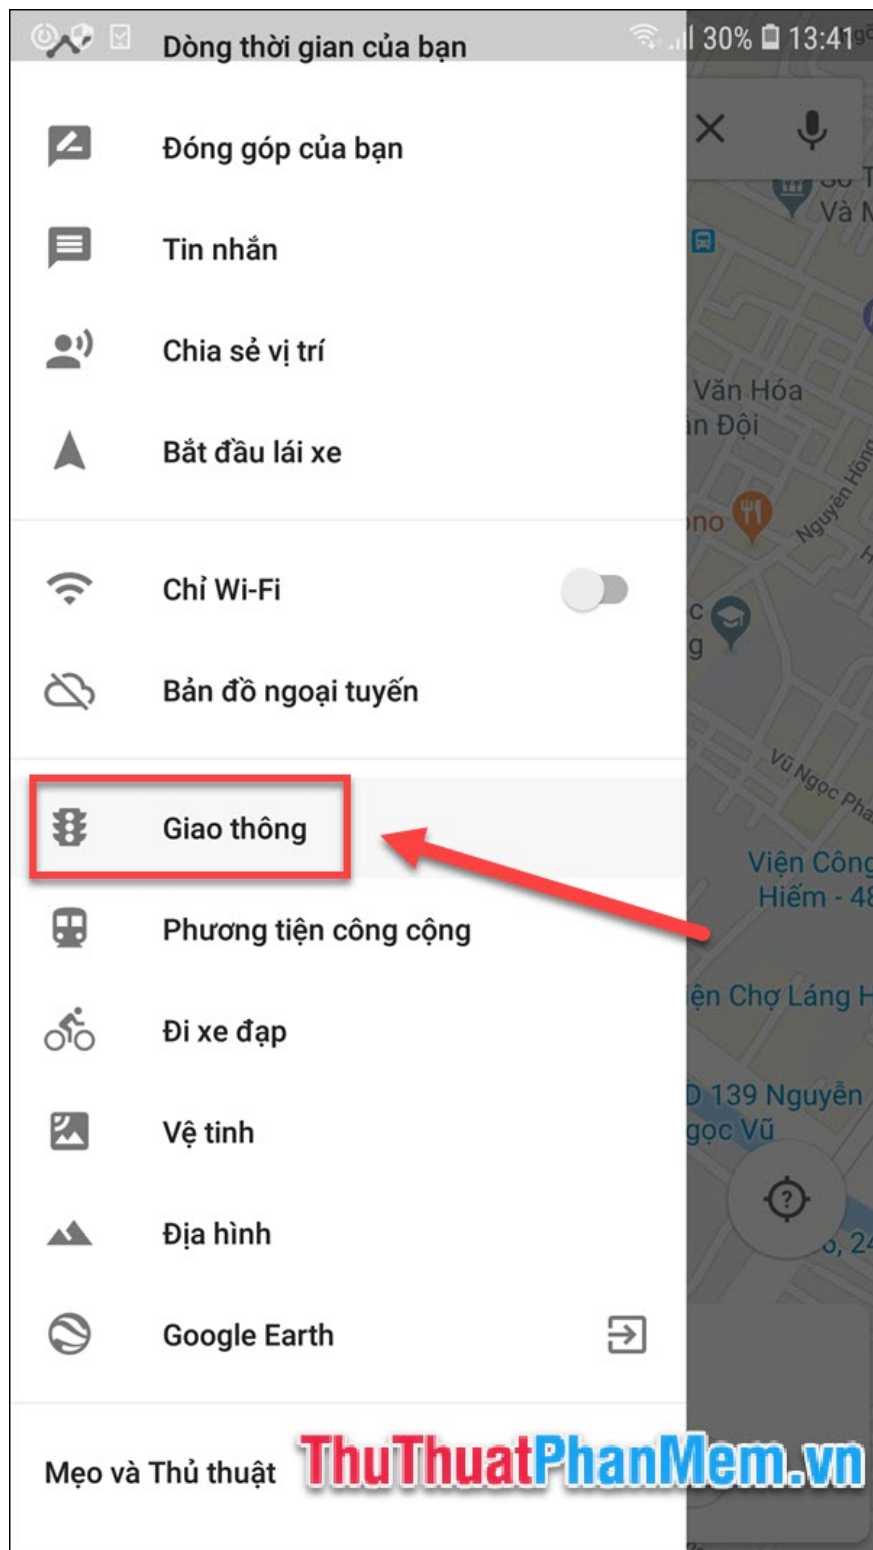

View traffic density on the Google Maps mobile application

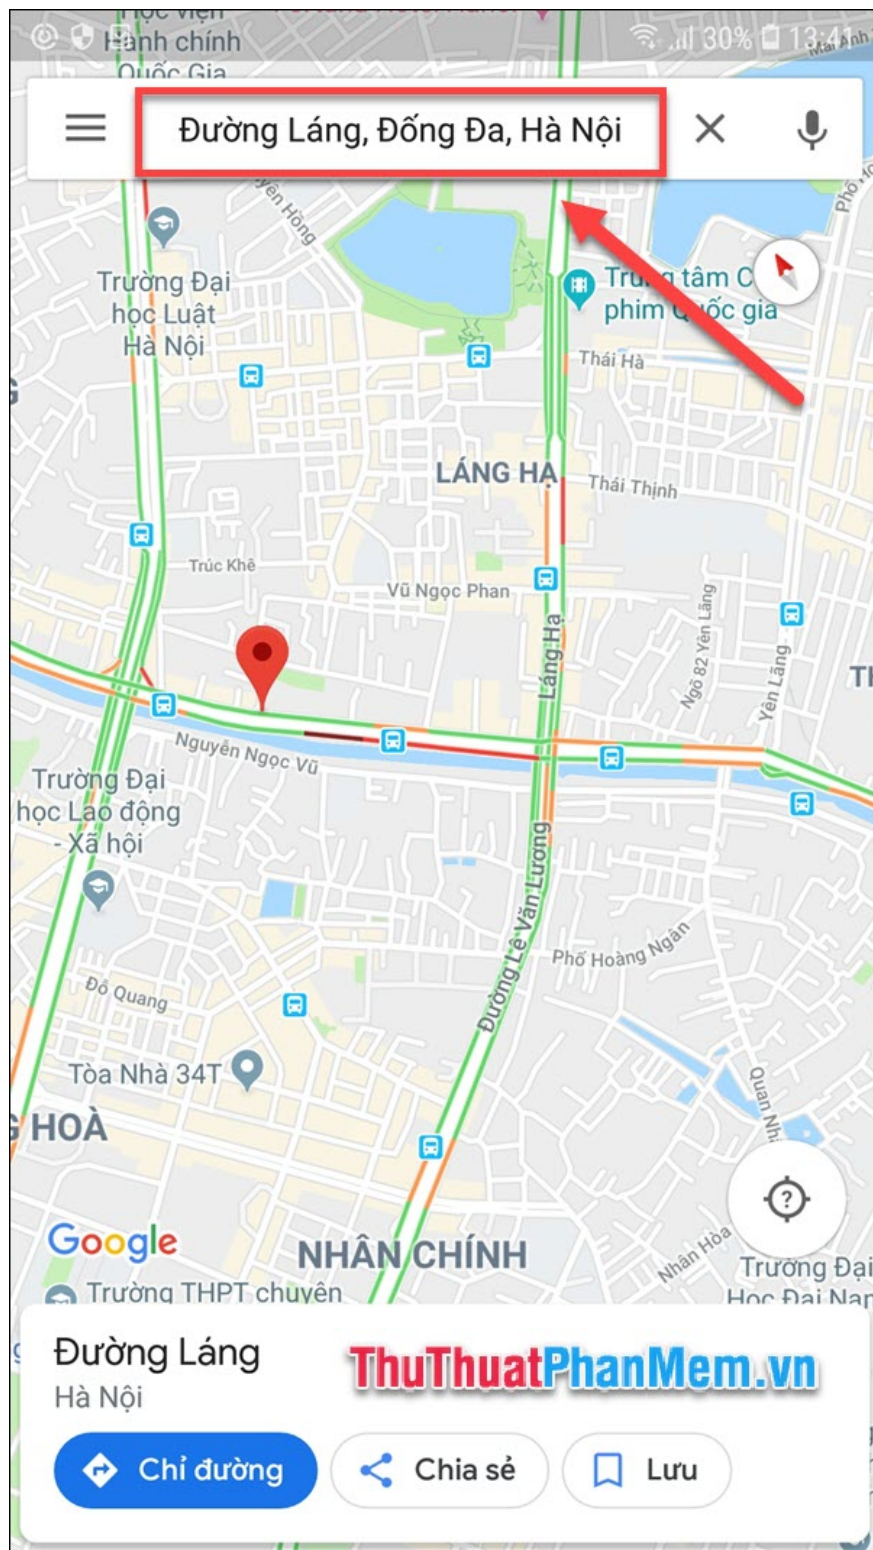

Step 1: Open your Google Maps application, continue to open the **Menu** in the main interface:

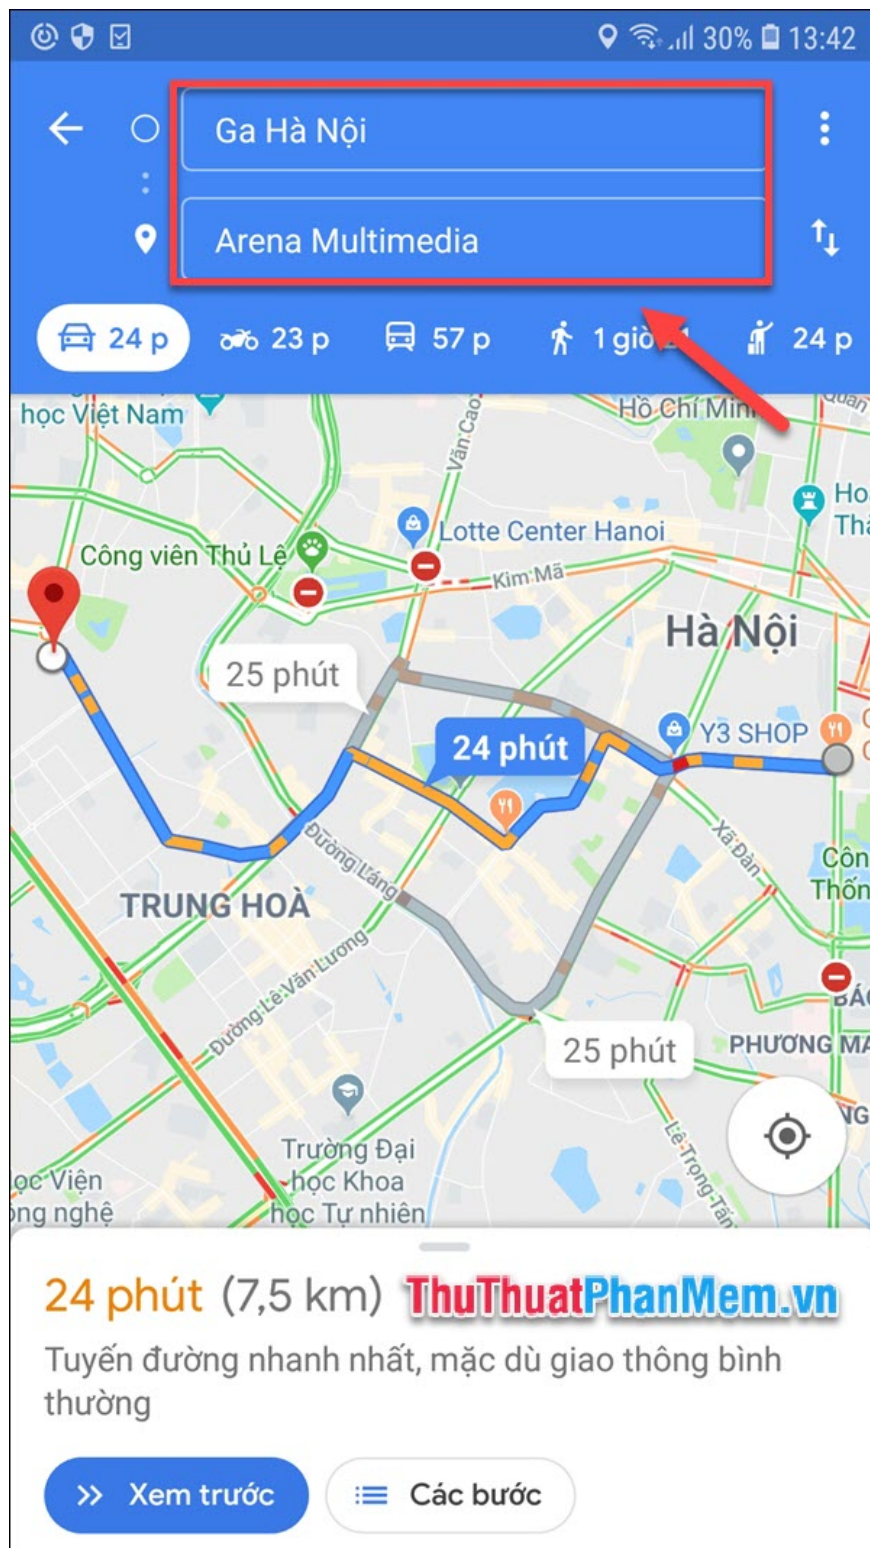

Step 2: Select Traffic (Traffic).

Step 3: Enter the location you want to research into the **Search** box and the color bands showing traffic status will appear.

Directions feature similar to PC:
