

How to select the appropriate charging cable for the phone

If you are wondering if you should choose which phone charger cable is best and suitable for your phone, please see the article article we share below.

If you are wondering if you should choose which phone charger cable is best and suitable for your phone, please see the article article we share below. Certainly, after reading, you will not be confused when choosing to buy charger cable for the phone.

1. How to choose to buy standard backup charger for iPhone
2. Differentiate charger, genuine and fake iPhone cable
3. Choose to buy a backup battery suitable for smartphones

1. Select the charger cable as needed

Currently, on the market there are many charging cables and diverse in size such as: 20cm, 40cm, 1m, 2m, . Based on the demand, you choose the appropriate charging cable for the phone.

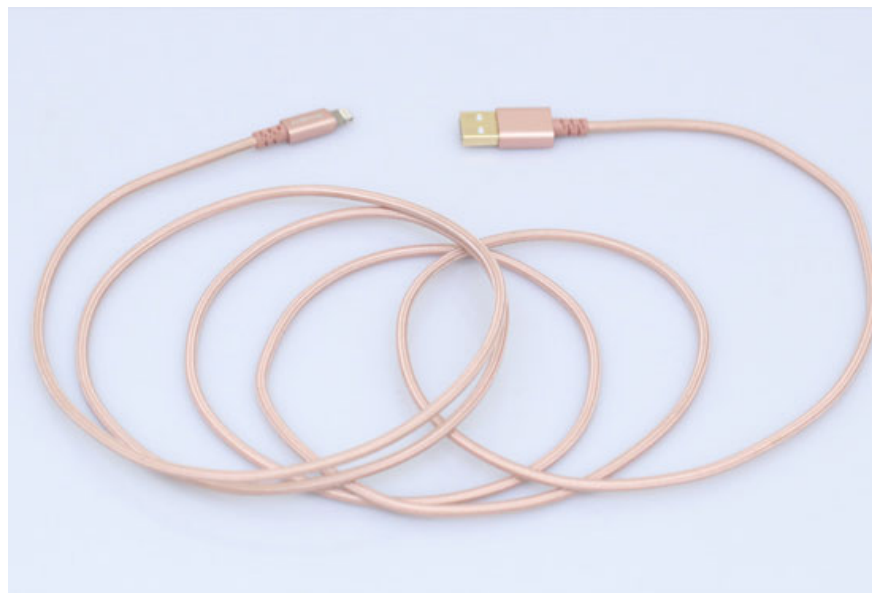

1. Charging cable from 20 - 40 cm long: This type is suitable for you to charge with a backup battery charger.

1. 1m long charging cable: This is the most popular cable, it is suitable for all use needs.

1. 2m long charging cable: Suitable in case the distance from your phone to the power source is too far and you cannot move or change.

2. Don't pay too much attention to "Made in China"

You don't need to be too confused when you see the words "Made in China" appear on charging cable products, or adapters and even phones. Because China is now one of the strongest countries in electronics. In addition to the poor quality brands, they also have brand names, some of the world's largest firms also have factories in China. Therefore, Made in China is no longer too important.

3. Adapter has suitable current intensity

Each charging adapter has a compatible "Output" current output parameter. You should pay attention to this feature when choosing an adapter, since using standard chargers that are too high or too low compared to the manufacturer-specified charger will affect your phone's battery. Take an example, if your charger has an Output parameter of 5V - 1.55A, you can buy an external Output 5V - 2A adapter.

4. Brand and guarantee

As can be seen, most of the current phone accessories are labeled Made in China. However, as mentioned above, you only need to select the phone charger cable with warranty and reputation. For example, the 1 year policy changes 1 if the device has an error.

5. All-In-One products all in one

This type of charger cable is very handy, you only need a single cable but can be charged for iOS devices as well as Android.

The above are some of the experiences to buy a phone charger cable, hopefully with these tips you will be able to buy a charger cable that meets the durability and cost criteria. After acquiring a new phone charger cable, you should immediately and always take 3 steps to protect the phone charging cable that the Network Administrator previously shared so that the charging cable is difficult to wear, break and prolong life. .
