How to send large data files up to 2.5GB via the Internet using Firefox. Sending files on the internet has always been one of the fairly common things these days. As we all know there are many cloud storage services on the market today, such as

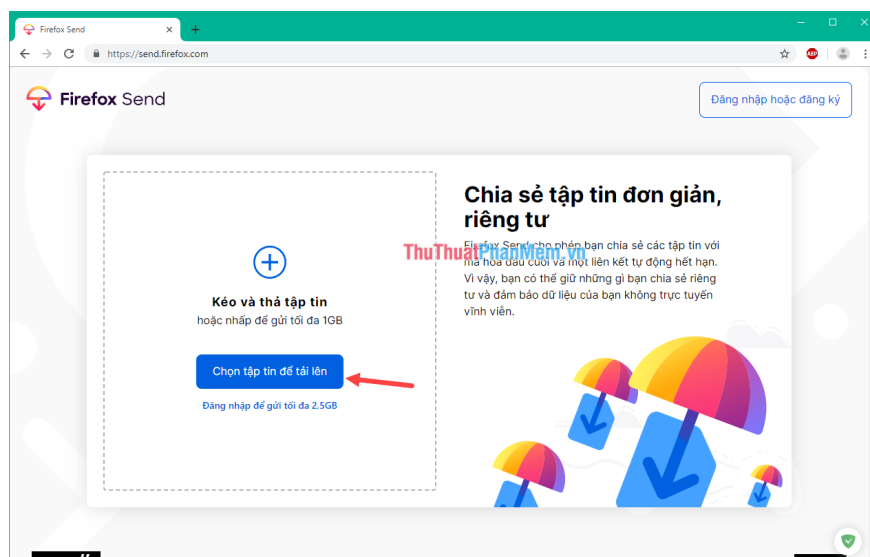

Sending files on the internet has always been one of the fairly common things these days. As we know there are many cloud storage services on the market today, such as: Fshare, mediafile, mega.nz . etc. And recently a new name has entered the storage market. That cloud is FireFox, a very famous browser vendor. If you do not know how to use cloud storage service of FireFox then follow our following article.

FireFox's online file transfer service is called FireFox Send, With FireFox Send you can send files up to 1Gb, if you register a FireFox Send account, you can send files up to 2.5Gb. To send files with FireFox Send you do the following:

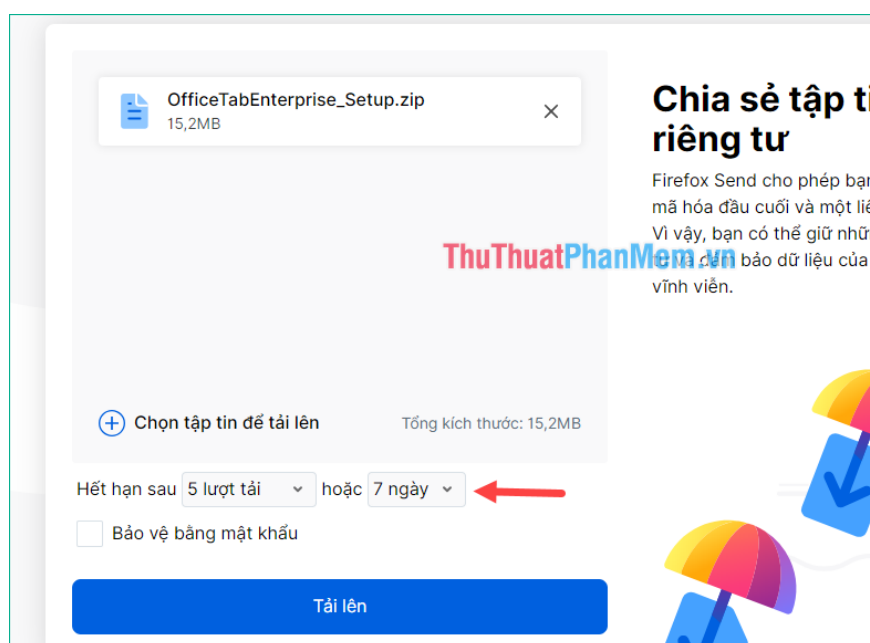

Step 1 : Access the address: <https://send.firefox.com/>

In the main interface of the website you click 'Select file to upload "

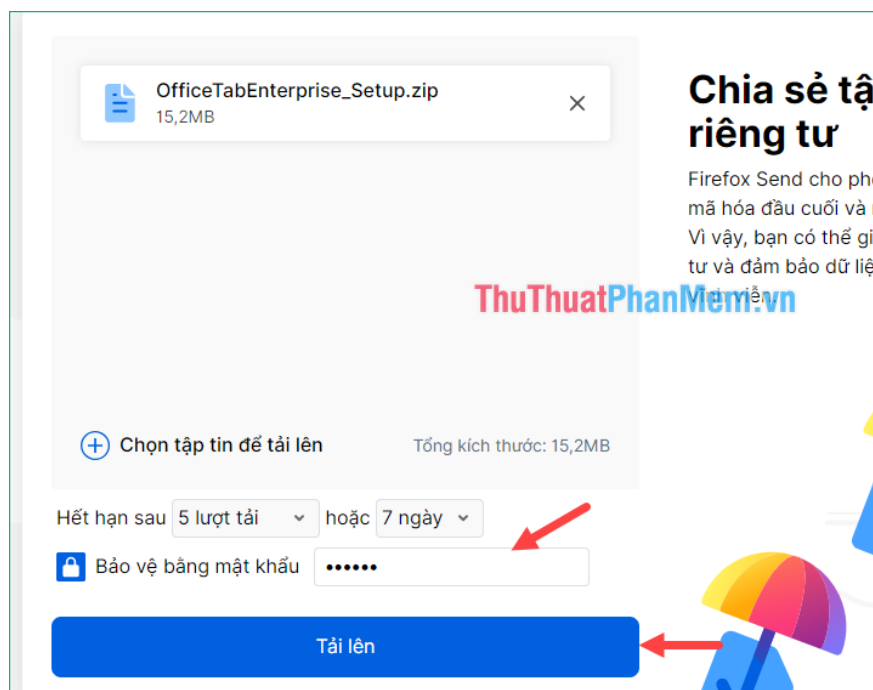

Step 2: After selecting the file in your computer, you can choose the expiry time of the file.

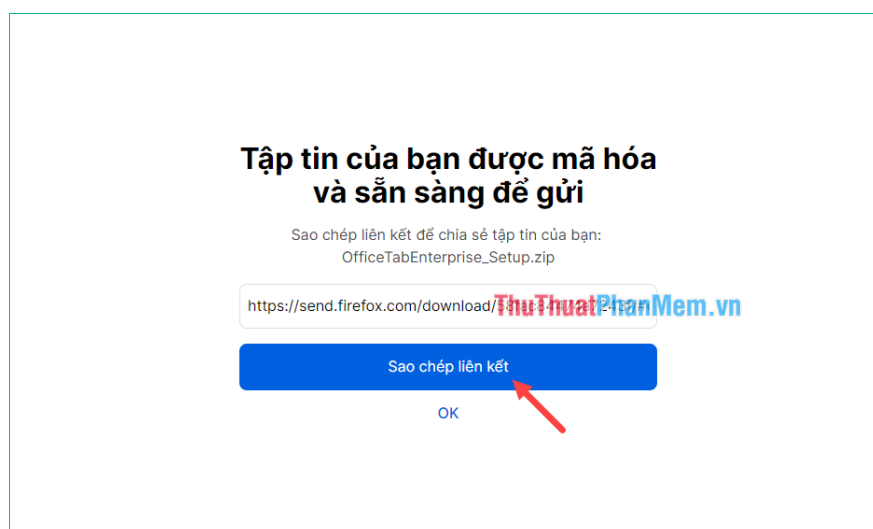

For example : Below we choose to expire after 5 downloads or 7 days, your file will be deleted after 5 downloads or after 7 days the file will be deleted.

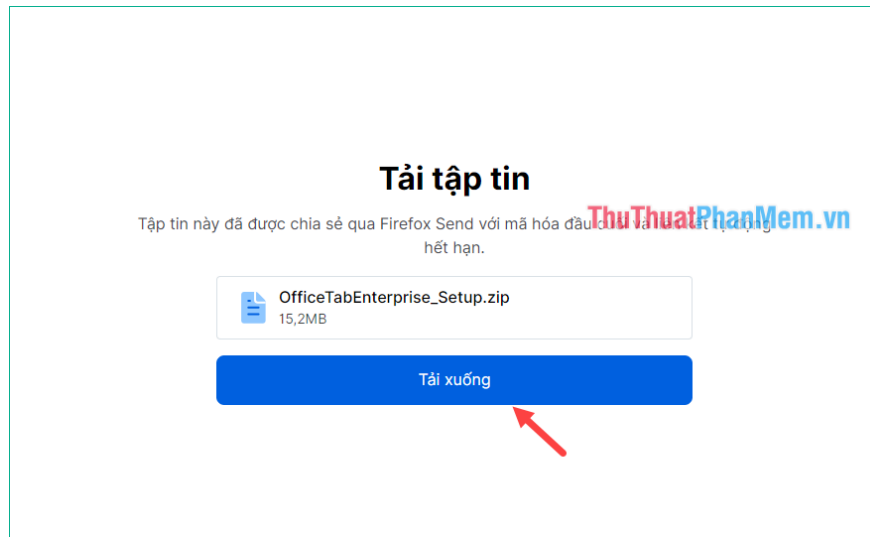

If you want to protect the file with a password, select the **Password protection** line then enter the password in the next box. Finally click **Upload**:

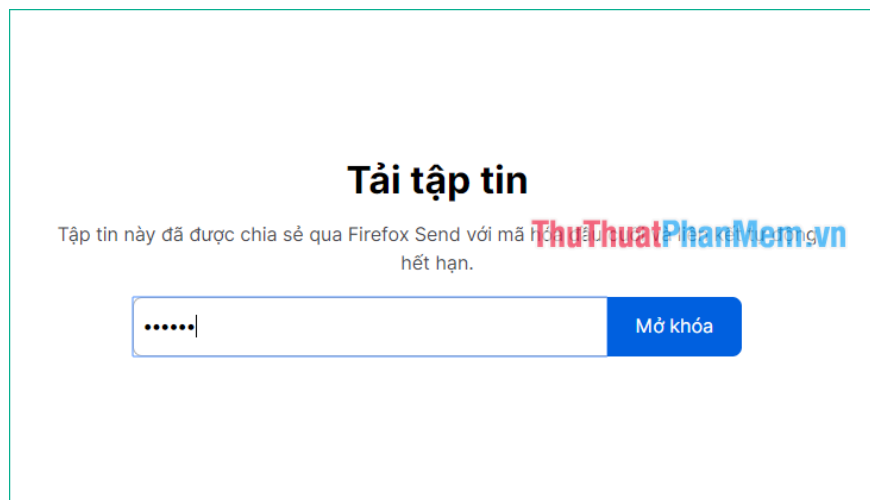

Step 3: After the file is successfully uploaded, you will copy the link and send it to others so that they can download it to your computer:

When others visit the link you send, they can download your file easily:

If you leave the password, they will have to enter the password to be able to download:

Above is an article on how to send files over the Internet using FireFox, thank you for watching the article!
