

How to send large files via Gmail

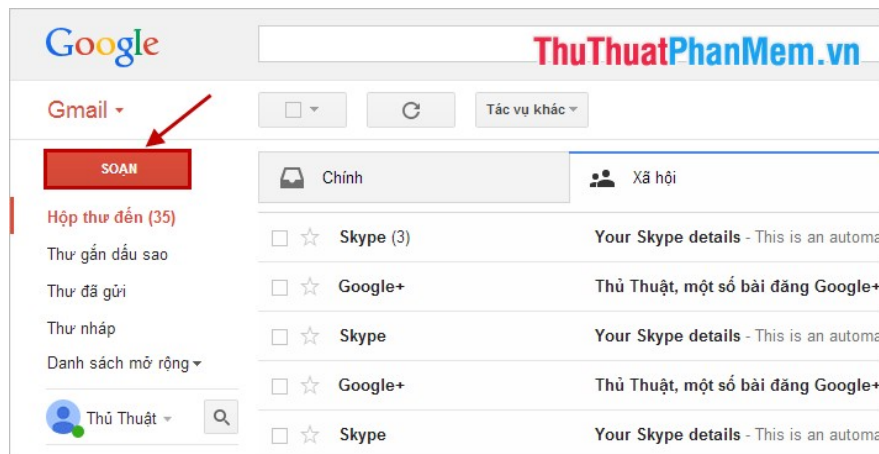

When you attach a file larger than 25MB, gmail will report the file exceeds the attachment limit. The simplest way is to use Google Drive to send large files.

You often use gmail to send data files to others, but with small files, sending emails with additional files is a very easy job that everyone knows. But for large files, when you attach a file, gmail will report the file exceeds the attachment limit. The simplest way is to use Google Drive to send large files.

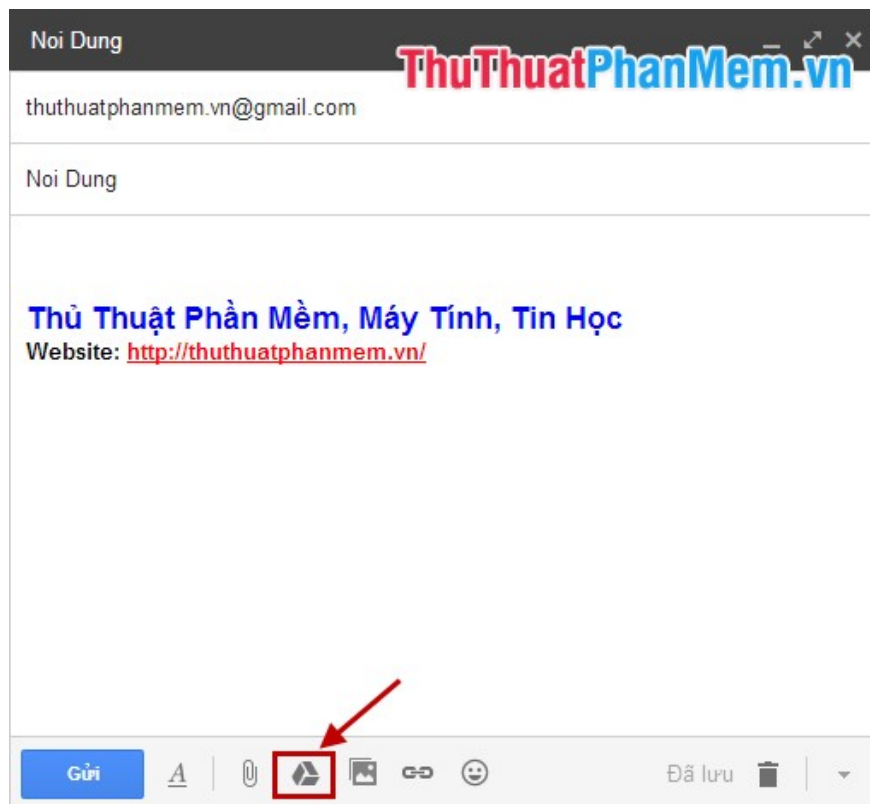

The article shows how to send large files via gmail email through Google Drive.

Step 1: You access the link <https://accounts.google.com> and log in to gmail with gmail account you want to send large files.

Step 2: Click **Compose** to compose a letter.

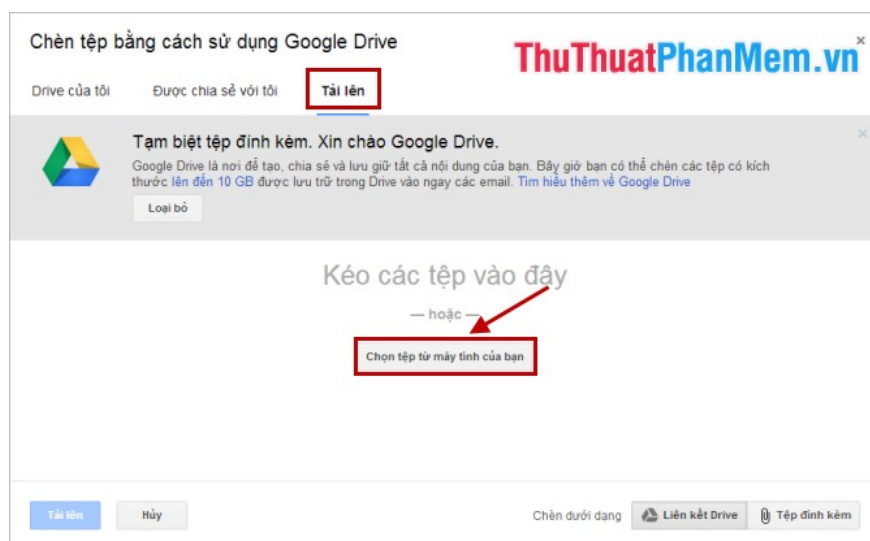

Step 3: At compose interface you enter the email address to send and the title to send then click the Google Drive icon

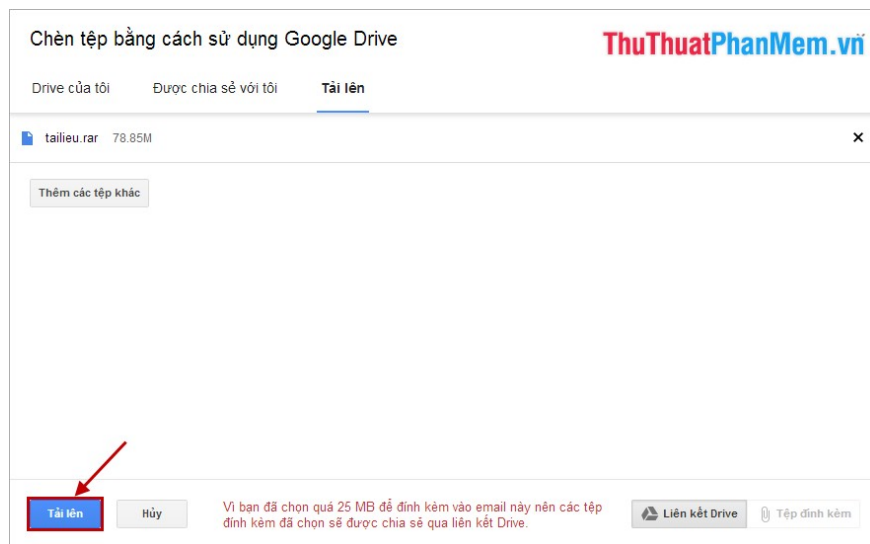

Step 4: In the **Insert file using Google Drive**, select the **Upload** tab and click **Select file from your computer** and select the large file to attach via gmail.

Note: You should compress the file to easily upload and reduce the size.

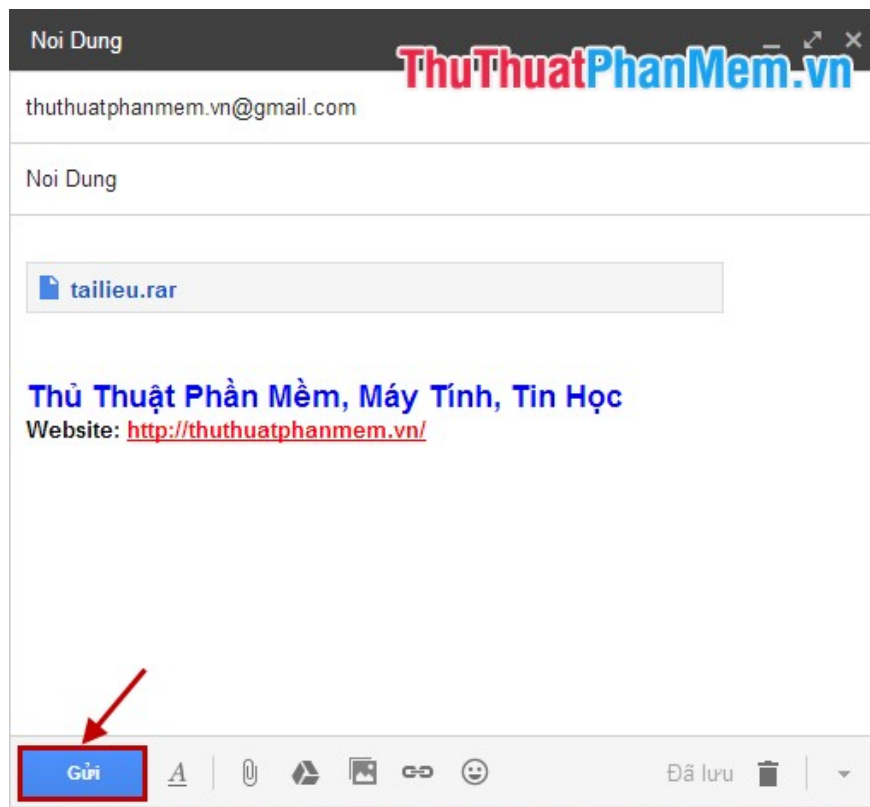

Step 5: Click **Upload** to download the file.

Wait for the file to upload.

Step 6: The upload process is finished, the file will be displayed in the content of the email, you can continue to upload other files if you want. After the download is complete, click **Submit** to send the file.

So you can easily send large files via Gmail or you can also use the page to upload large files such as mediafire, fshare, tenlua . then share the link in the email to send. Good luck!
