

How to send Live Photos images as animated GIF images in iOS 11

Let's take a look at how to send Live Photos images as animated GIFs in iOS 11 with a simple tip, making it easy to share your favorite GIF photos with friends. So see the full instructions discussed below.

iPhone makers have developed new photography features iPhone 6s called Live Photos. At the time of the release, users were not interested in this feature because they thought Live photos were not a good choice. Live Photos' principle is very simple, when you press take a photo, it will shoot 1.5 seconds and then shoot and record another 1.5 seconds to create a 3-second clip, but in the photo library you only see only one photo. In general, these Live Photos are relatively similar to GIF images. This feature may have become a good alternative to GIF images if there are no errors made by the manufacturer that made it ranked low, that is, you cannot view Live Photos on other devices. When you want to transfer Live Photos photos to any device other than iPhone 6s or to anyone, the recipient can only see a normal still image. Fortunately, there is a method through which users can share Live Photos photos without changing the image file. The following article will guide you to send Live Photos images as animated GIF images, please follow them.

Note: Sharing this Live Photos in iPhone is limited to the Mail application. Let's wait for the next update so it can be shared on other apps too.

How to send Live Photos images in GIF format in iOS 11

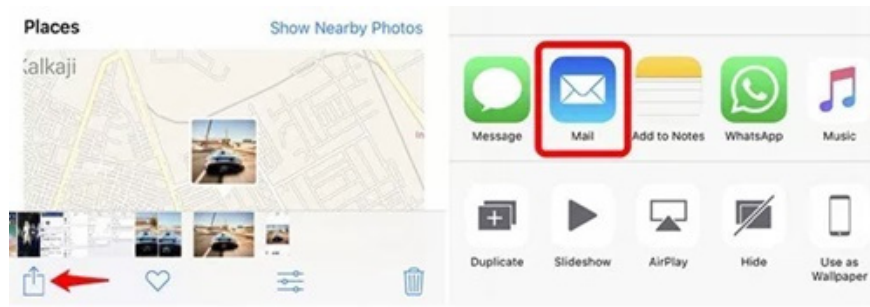

The method is quite simple and easy and you just need to follow the step-by-step instructions below.

1 Apple has implemented a number of editing tools for Live Photos, helping users to edit photos, apply effects. Certainly, these tools for Live Photos can be easily used to share them as GIFs. First, open the Live Photos image you want to share and swipe from the image from the bottom up.

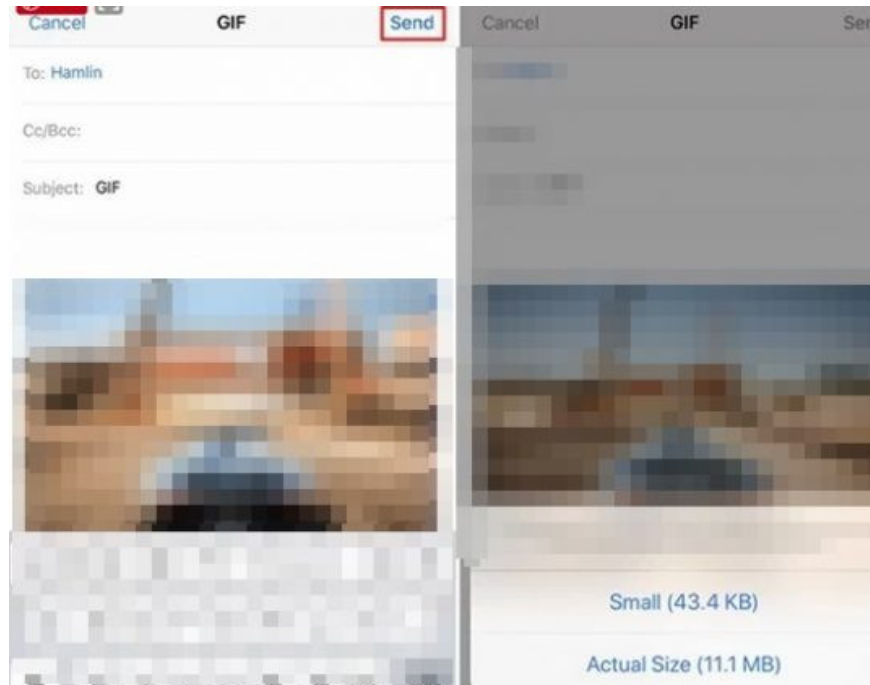

2 After that, you will see a new screen pop up. This is a Live Photos photo editing screen that contains many tools for editing. Apply Loop or Bounce effects to your Live Photos photos using transition effects inside the edit screen. Applying these effects is necessary because it helps convert Live Photos into GIF images.
