

How to send self-deleted photos on Telegram without secret chat

No need for the secret chat feature on Telegram, you can now send self-deleted photos on Telegram with the selected time that the application provides.

After the setup time, Telegram will delete photos in the chat and in the system without the user having to do it manually. The recipient will only be able to view the photo during the time period you have set. Below are instructions for sending automatically deleted photos on Telegram.

Instructions for sending automatically deleted photos on Telegram

Step 1:

First you need to update the Telegram application to the latest version. Then, at the interface on the application, the user clicks on **the file icon** to proceed with sending the photo.

Step 2:

Display the album interface on the phone, **click on the photo or video** you want to send in auto-delete mode. Then we click on **the timer icon** below as shown.

Step 3:

At this point, the user will see **the option to automatically delete the photo** after the other person clicks to view the photo. We select the time in the support list to set up automatic deletion of photos sent on Telegram.

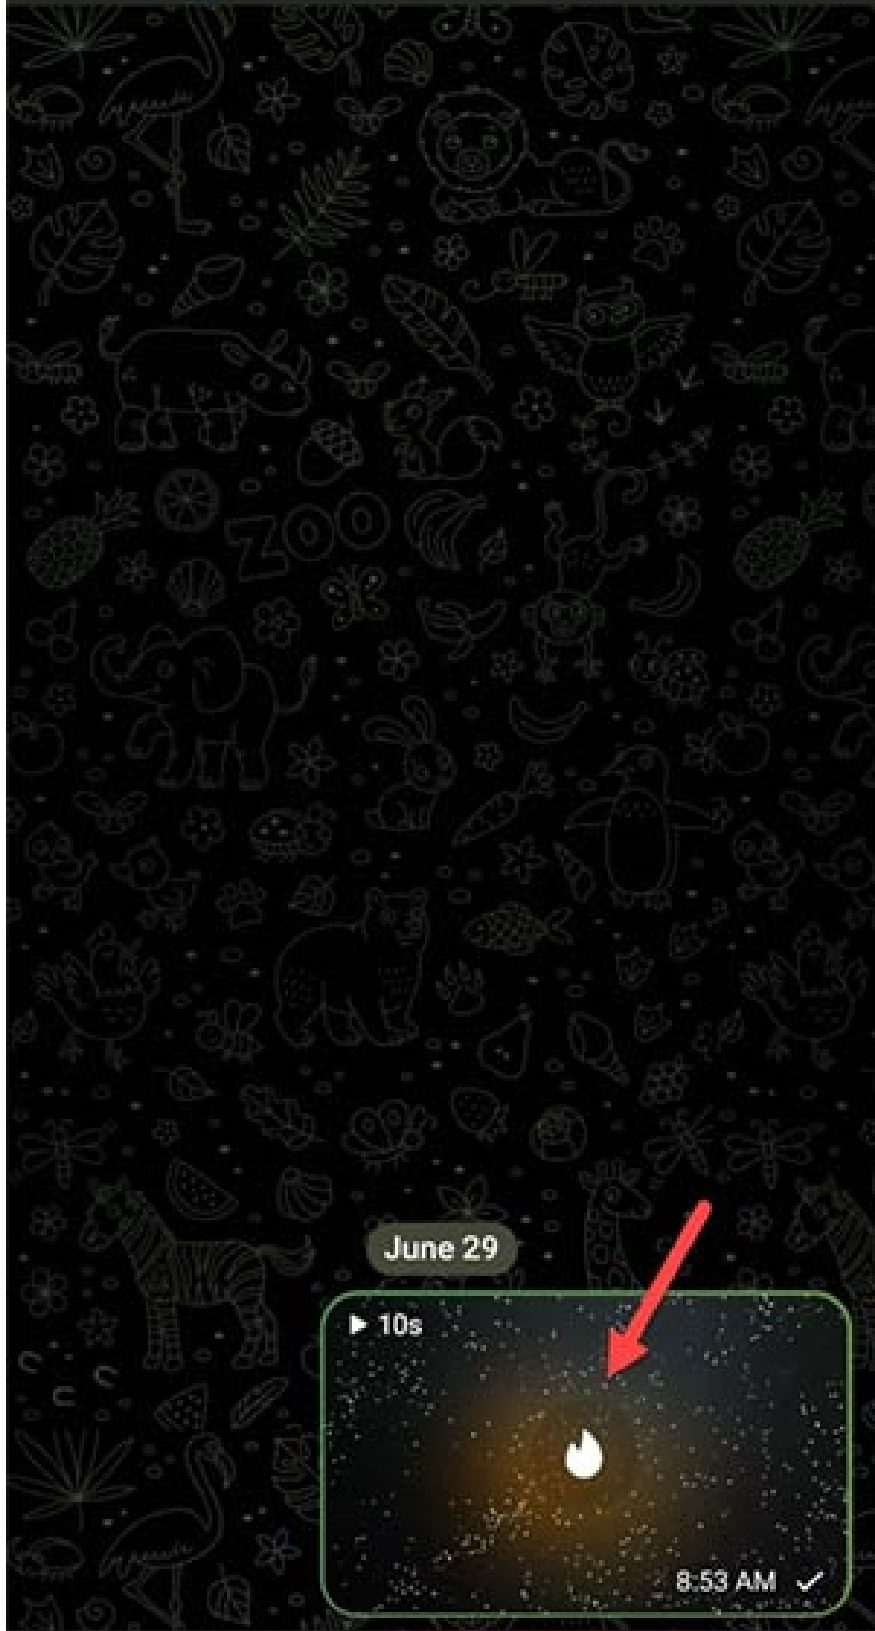

Step 4:

Images in automatic deletion mode on Telegram will have a **disappearing symbol** as below.

Message

As soon as the recipient clicks to view the image, Telegram automatically counts down the time and will delete it when the time runs out. And then the person receiving the message will no longer be able to view the photo.
