From there can be shared with friends or uploaded to YouTube. Therefore, this article will guide you how to extract audio, separate audio from video on VLC and YouTube online.

How to separate audio, separate audio from videos in VLC and YouTube

Users remove audio from video and replace it with other audio for different purposes. There are many tools to extract audio from video, from online tools to PC video editing software, available online.

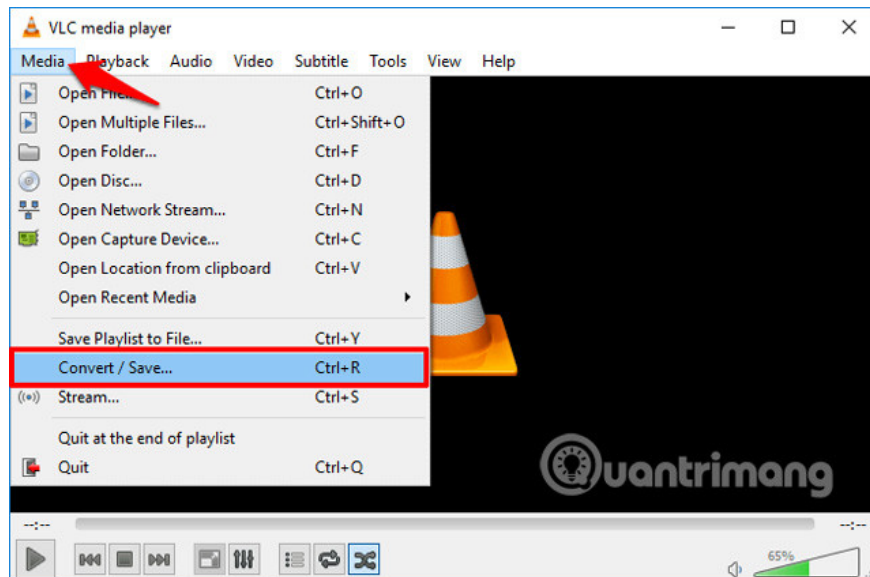

But if you are looking for an easier way to extract audio from videos without installing third-party software, follow the method below.

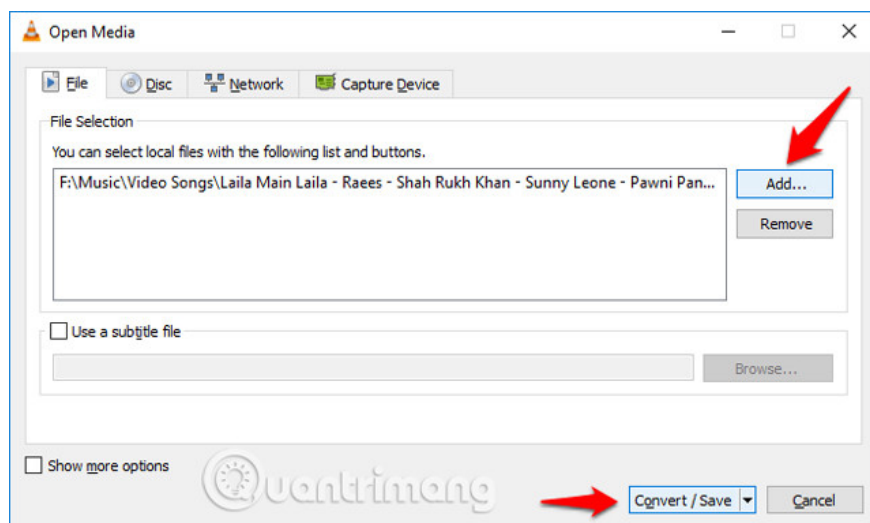

How to extract audio from video in VLC

Media player VLC is one of the most popular and free open source players available for most devices. People like this free video player because it's easy to use, fast and powerful. If you have installed VLC on the system, you don't need third-party software to extract audio from video. Here are the steps:

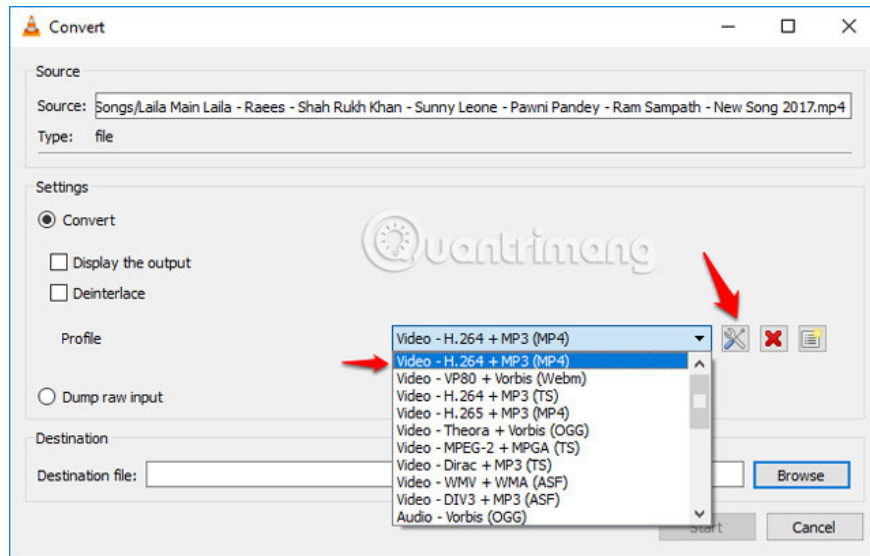

Step 1 : First, open VLC on your computer and access the **Media** menu, select the **Convert / Save option (Ctrl + R)** .

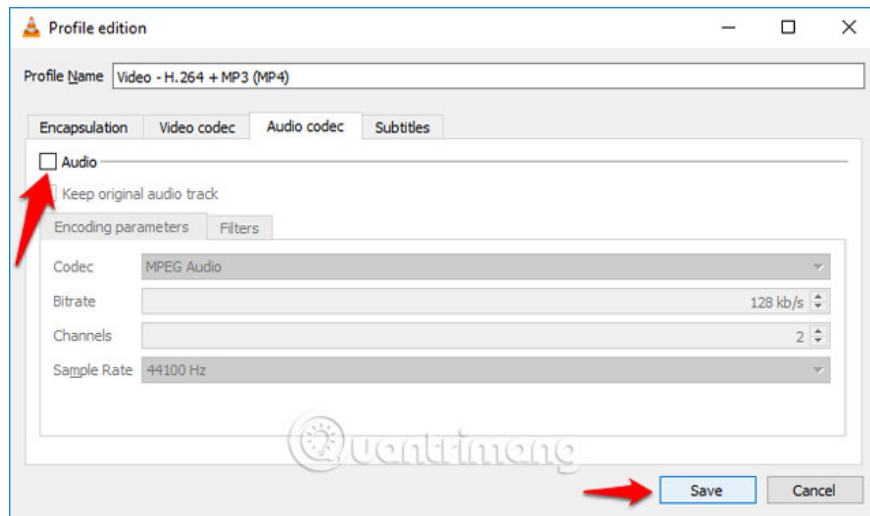

Step 2 : On the **Open Media** window, click the **Add** button and then select the video file whose audio you want to remove. After selecting the video file, click the **Convert / Save** button.

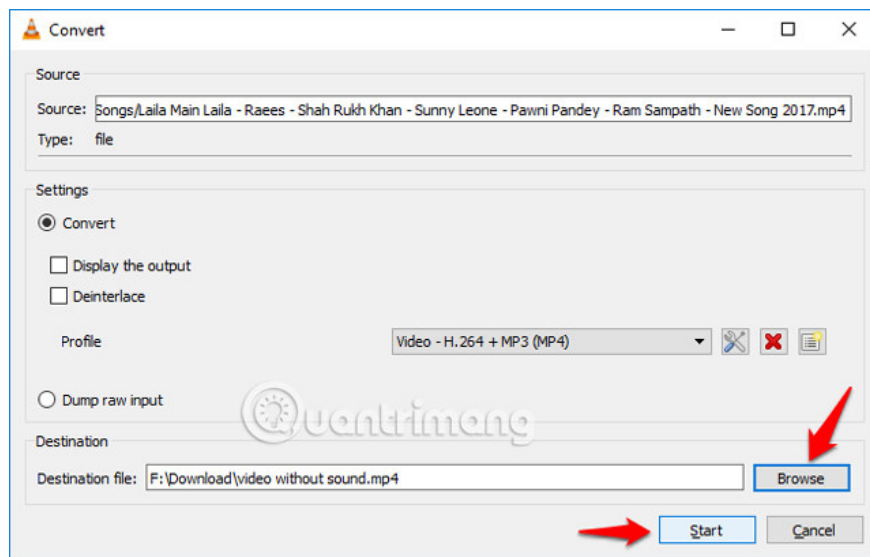

Step 3 : Now on the **Convert** window, first select the **Profile** you want to convert the video to and then click on the **Edit selected profile** icon to edit the **selected profile** .

Step 4 : On the **Profile edition** window, go to the **Audio codec** tab and uncheck the **Audio** option, then click the **Save** button to save the settings.

Step 5: Finally, click the **Browse** button and select where to save the converted video file, then click the **Start** button to start the conversion process.

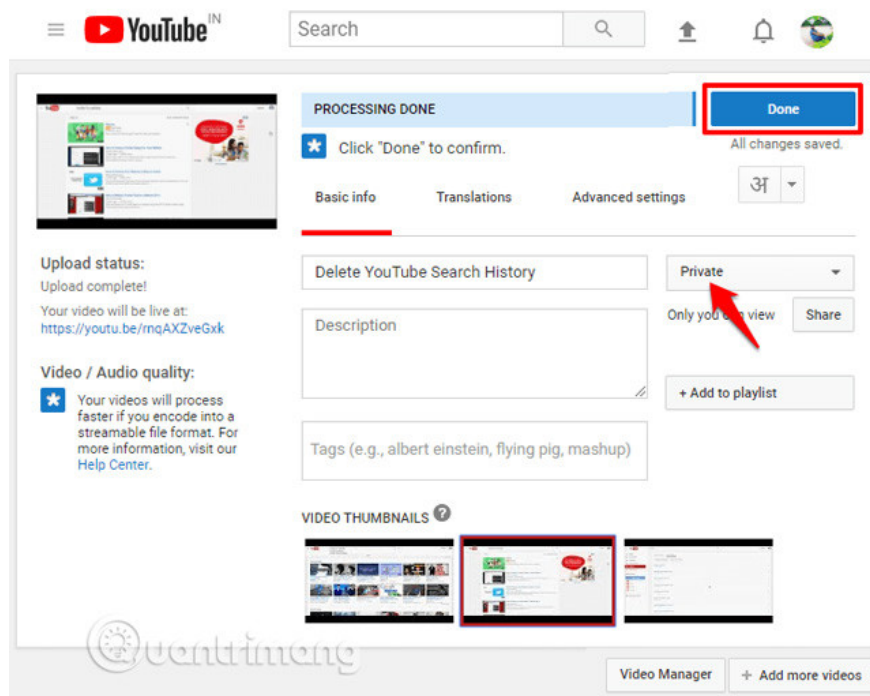

Conversion time depends on the length of the video you are editing. When the conversion is complete, you open the video and will not hear any sound.

How to extract audio from videos on YouTube

In case, you do not have the VLC player on your laptop or you cannot delete audio from the video using the first method, you can follow this method, we will use the YouTube website to extract audio .

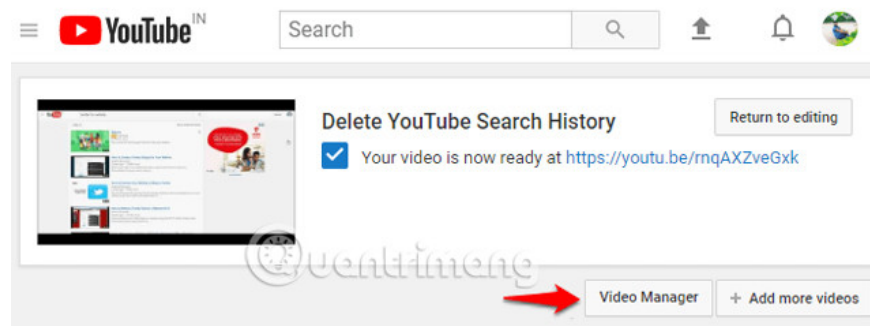

In this method, we must upload the video in private mode, after downloading the audio file, download it. This method takes a bit of time and you need a high-speed Internet connection. Follow the steps below:

Step 1 : First, upload the video to YouTube and when finished downloading, click the **Done** button.

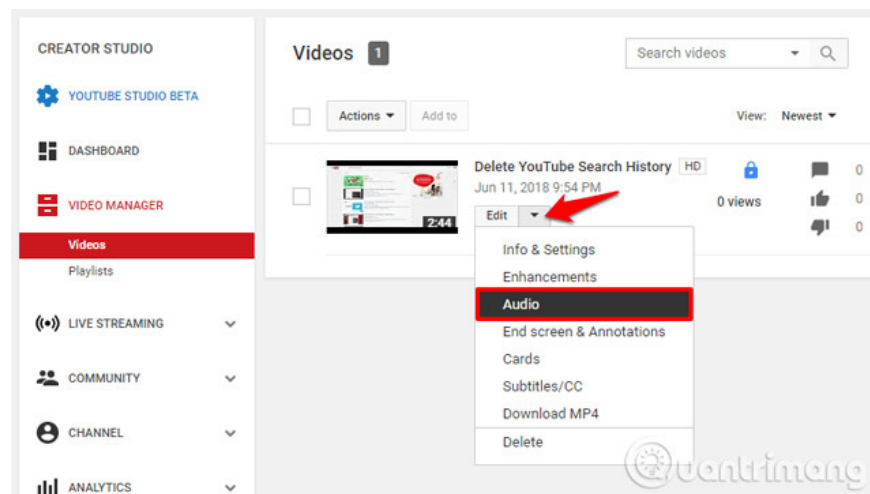

Important note : Upload the video in **Private** mode so no one other than you can watch the video.

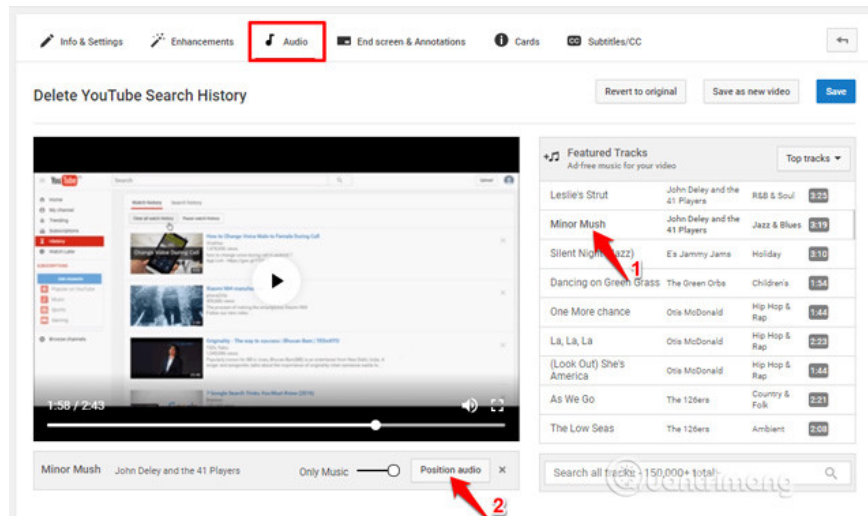

Step 2 : After the video is uploaded to YouTube, go to **Video Manager** to see the video has just finished downloading.

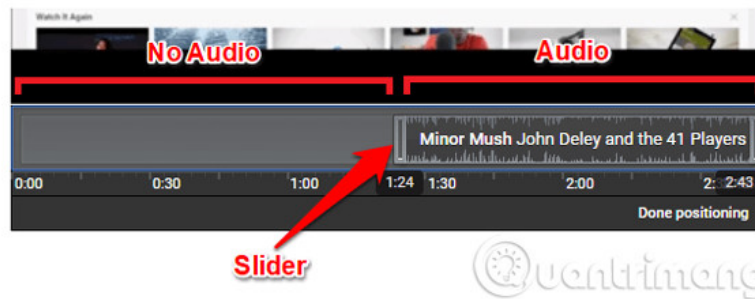

Step 3 : On **Video Manager** , find the downloaded video and click the down arrow button next to the **Edit** option and select **Audio** .

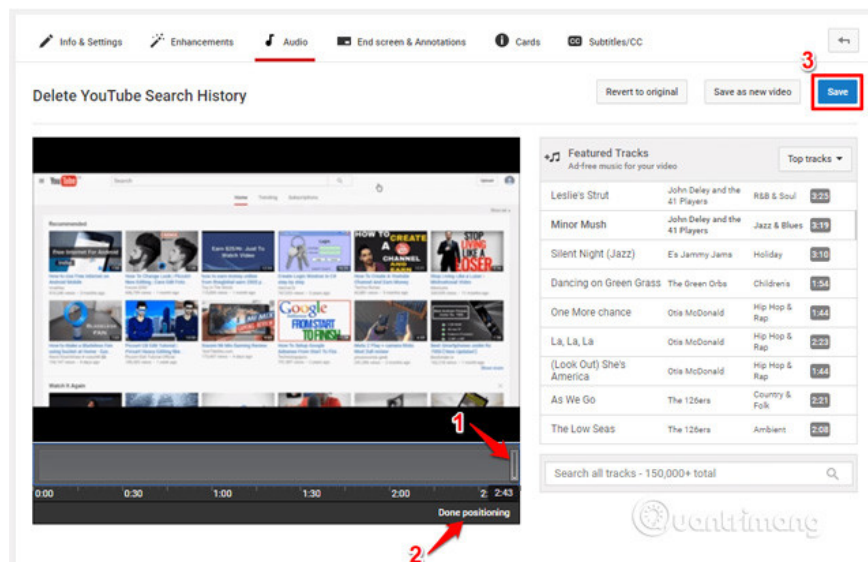

Step 4 : When in the **Audio** section, just select any random sound from the **Features Tracks** list and then click the **Position audio** button.

Step 5 : Now, you can customize the position of the sound according to your needs by dragging the slider. (Example: In the screenshot below, the audio part has been cut in half).

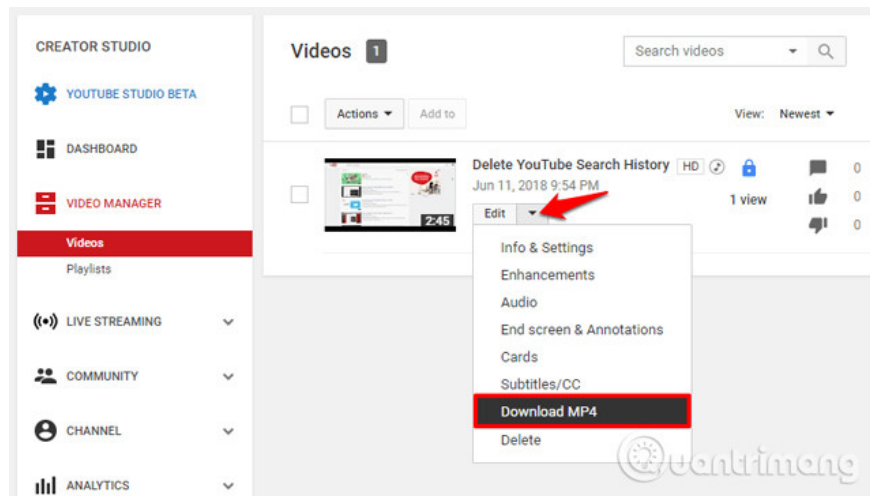

Step 6 : If you want to completely remove the audio track from the video, simply drag the sound slider to the end and then click the **Done positioning** option.

Step 7 : Finally, click the **Save** button to save the audio changes you have made. Now the edited video will be processed and may take a few minutes to display in the video library.

Step 8 : When you see the edited video in the library, click the down arrow next to the **Edit** option and select **Download MP4** to download the video.

Therefore, you can easily delete music from video or audio using the YouTube website. The way to extract audio from this video is a bit time consuming, but if you don't install the VLC player on your computer, this is a convenient way to extract audio.
