

How to separate backgrounds and remove image fonts using Paint available on Windows

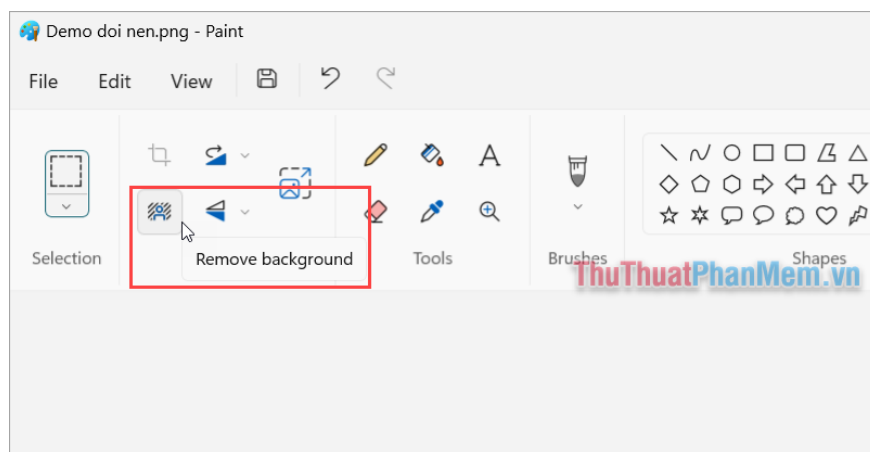

Paint on Windows can now separate backgrounds and remove image fonts no worse than Photoshop. This article shows you how to erase the background and image background on Paint!

Paint on Windows can now separate backgrounds and remove image fonts no less than Photoshop, even simpler. In this article, let's find out how to erase the background and image background on Paint with TipsMake!

1. Why should you use Paint to remove backgrounds and image fonts?

As we know, Paint is an ancient Windows software and has no features other than a brush for miscellaneous drawing. But after a decade, Paint has officially had the greatest update of all time. The new update of Paint has been integrated with AI - Artificial Intelligence to bring completely new experiences. Microsoft developer officially brought Paint to new heights with today's top effective features.

One of the highlights of the new version of Paint is the 'Automatic image background removal' feature. According to the developer, the automatic image background removal feature only takes a single operation, has fast processing speed and is capable of handling complex, highly difficult images. Artificial intelligence integrated into Paint will help the tool identify the subject and image background to come up with the most appropriate deletion method. On average, Paint is able to separate the background of an image every 30 seconds.

The Paint version that adds the feature to remove image backgrounds is version 11.2306.30.0. You only need to install Paint version 11.2306.30.0 or higher to experience the background separation feature completely free.

In this article, TipsMake only focuses on instructions on how to remove fonts from Paint images. If you want to learn more about how to combine photo backgrounds, change backgrounds, and change image backgrounds with Paint, please refer to the article below:
