

How to set a fixed password on Teamviewer

When setting a fixed password on Teamviewer, users will easily access by entering the ID and password.

On Teamviewer users can create passwords but only in random form and provided by the software itself. Then Teamviewer will provide the password to connect 2 computers together. In case you want to use 1 password, you can set a fixed password on Teamviewer.

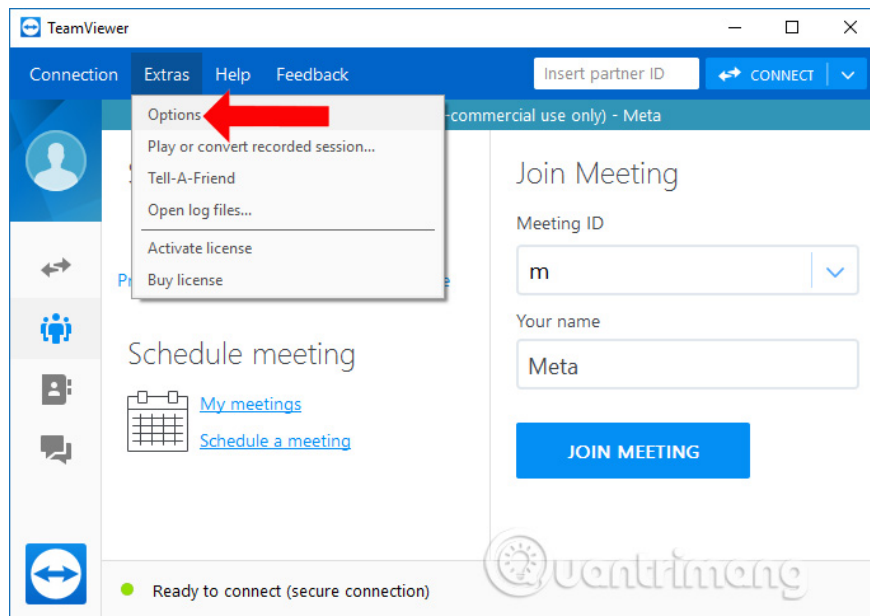

This fixed password will always be used while you want to connect to other computers, without using a random password. However, users should note that if you connect with trusted partners, you should set a fixed password for Teamviewer.

Instructions for setting a fixed password on Teamviewer

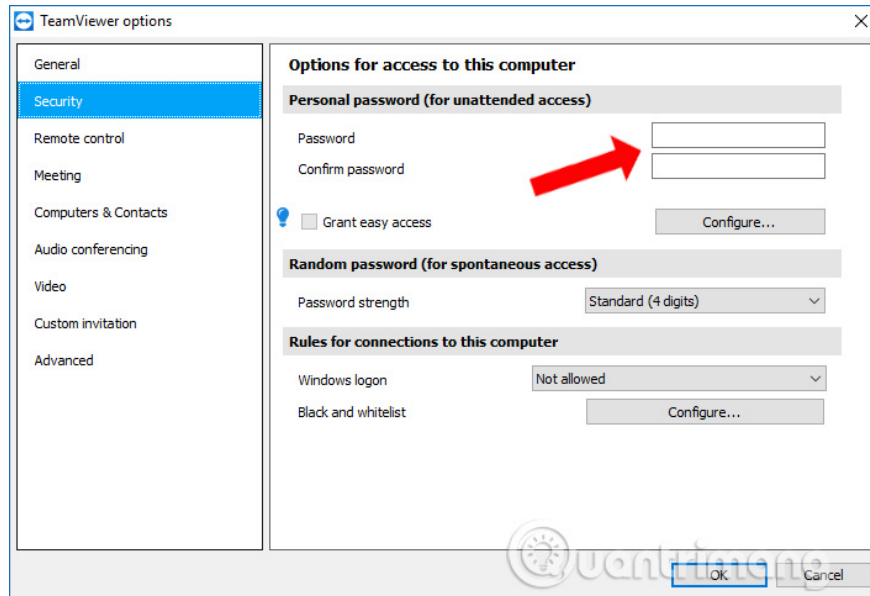

Step 1:

At the interface on Teamviewer, users click on the **Extras** item above and then select **Options** .

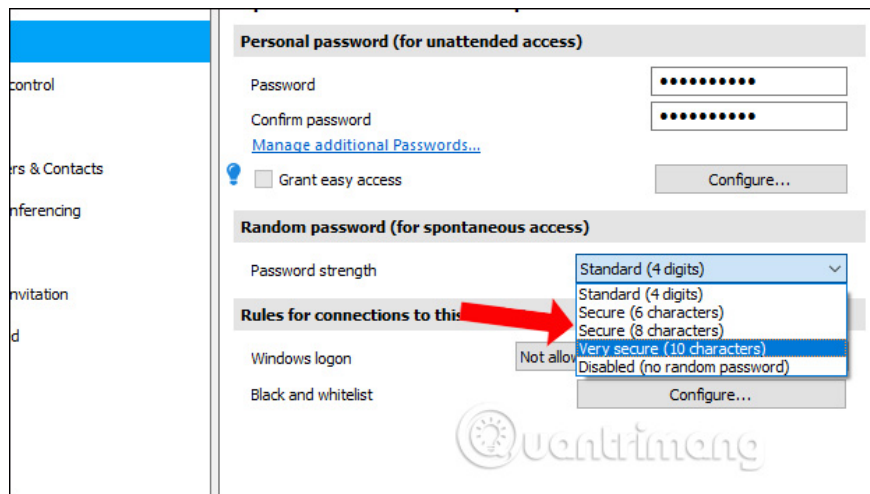

Step 2:

Switch to the new interface and click on **Security** management in the left corner of the screen. Look to the right of the **Personal password (For unattended access)** section , enter the password you want to set for Teamviewer. Click OK to save the password.

Also in **Random password**, users can also adjust the password length from 4 characters to 6, 8, 10 characters. Disabled to disable passwords when you need to connect 2 computers.

Setting a fixed password on Teamviewer will help users quickly access, by pressing the set ID and password. However, this approach is only recommended when you are connected to a truly trusted computer, due to personal computer data security issues.
