

How to set Perplexity as default search engine on Chrome

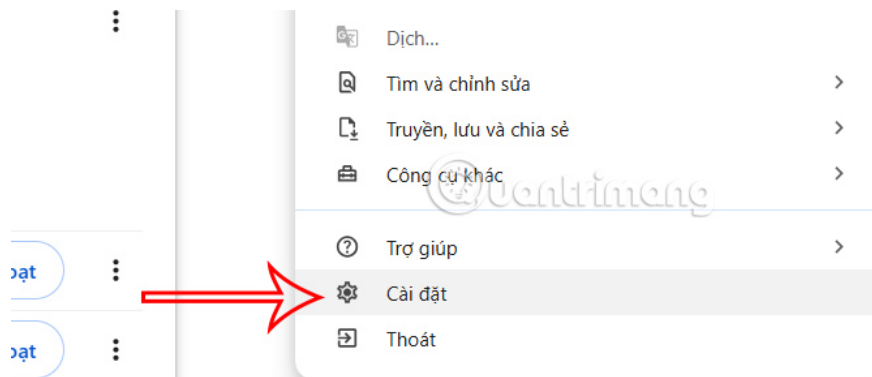

Setting Perplexity as your default search engine on Chrome can significantly improve your browsing experience by providing AI-driven personalized search results.

Setting Perplexity as your default search engine on Chrome can significantly improve your browsing experience by providing personalized, AI-driven search results. With Perplexity, you get more content like lists of links, summaries, and contextual insights relevant to your query. Here's how to set Perplexity as your default search engine on Chrome.

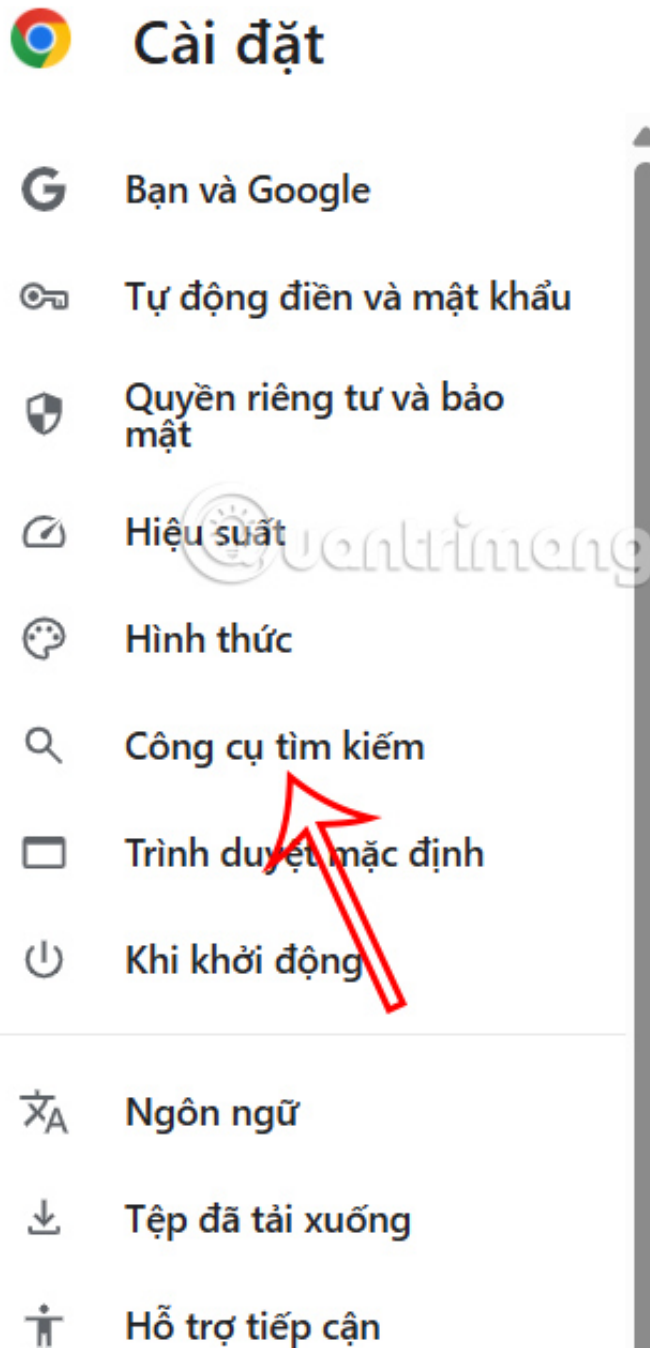

How to set Perplexity as Chrome default search engine

Step 1:

At the Chrome interface, users click on **the 3-dot icon** and **select Settings** in the displayed list.

Look to the list on the left and **click on Search Engine** to adjust.

Step 2:

Look to the right and **click on Manage search engines and site search features** .

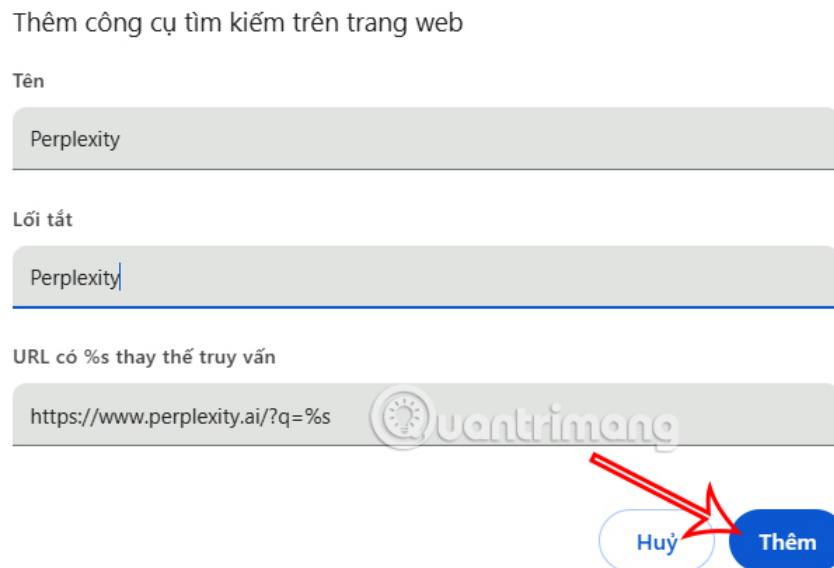

Step 3:

Users scroll down to **the Search section on the site** and then **click the Add button** to add the tool.

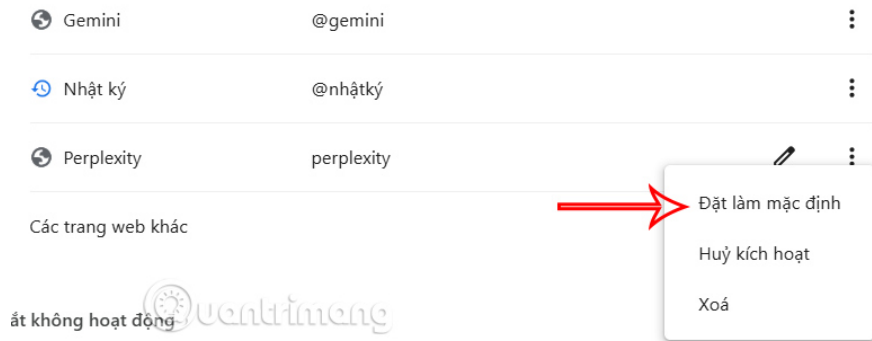

The interface for you to enter the Perplexity search engine added to the Chrome browser is displayed. We enter **https://www.perplexity.ai/?q=%s** below the URL bar.

Click Add to save this new search engine.

Step 4:

As a result, you will see the Perplexity tool displayed in the list of search engines on Chrome. At Perplexity, click **the 3-dot icon and select Set as default**.
