

How to Set, Reset, Remove and Recover the Password of Excel Files

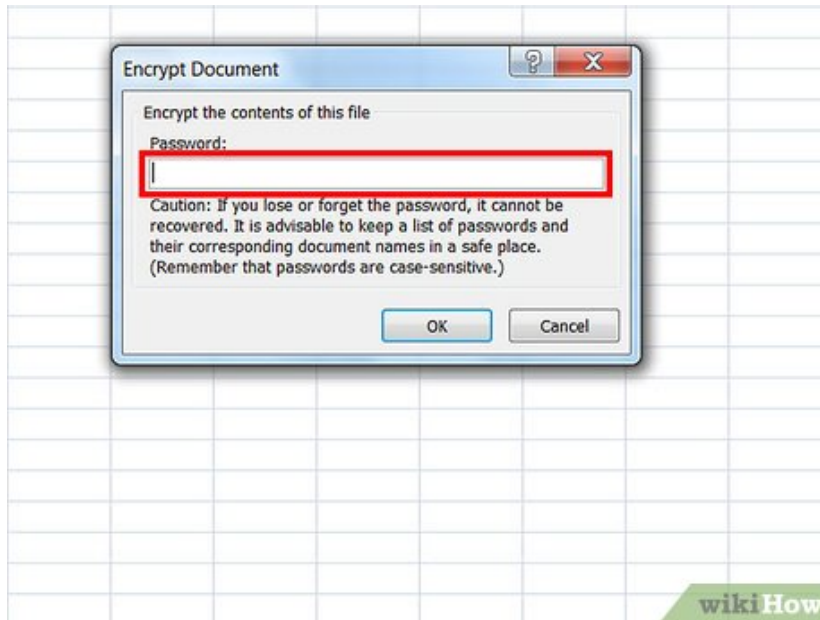

It is very crucial to protect a company or individual sensitive data in today's highly connected world. Excel documents containing data such as payroll information, trading algorithms, confidential information or company secrets should...

Method 1 of 4:

Setting a Password for an Excel File (taking Excel 2007 for example)

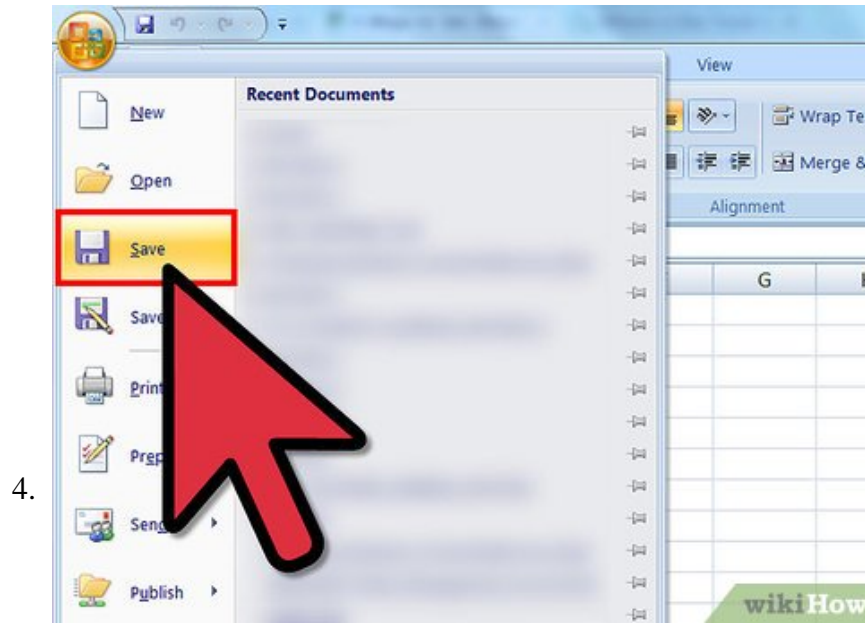

Click on the Office button, select Prepare, and then choose Encrypt Document

Enter a password in the Password box and then press OK.

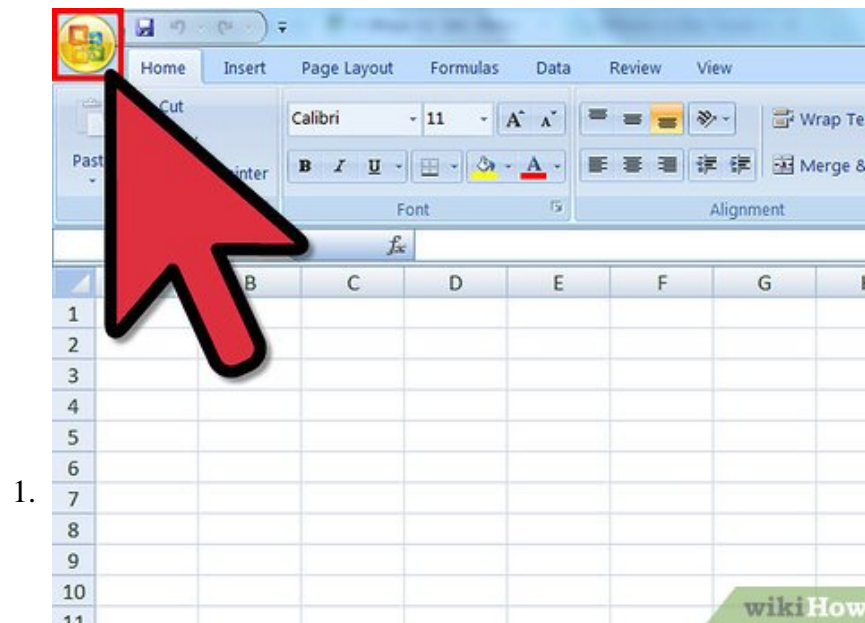

Re-enter the previous password to confirm and then press OK.

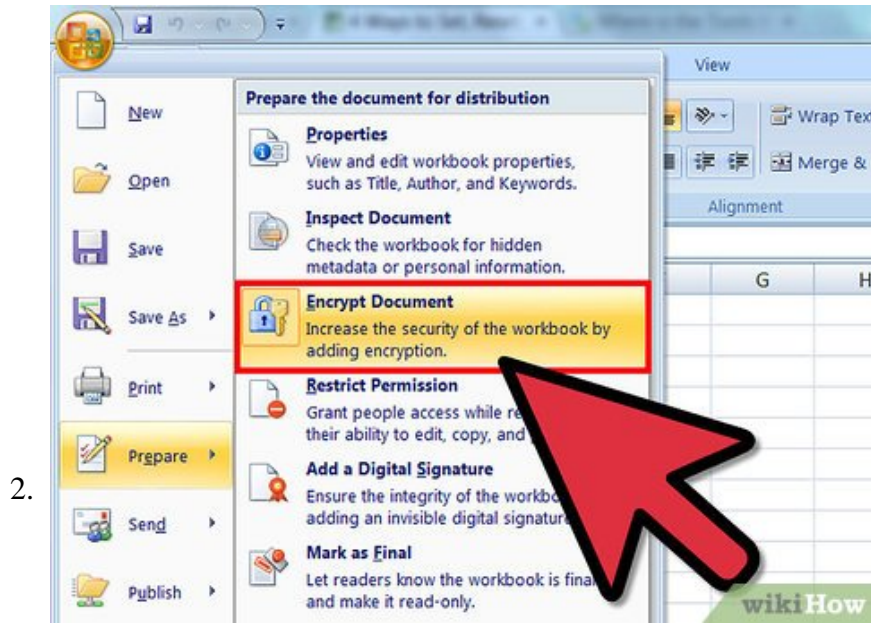

Save the password and the MS Excel 2007 document.(Note: As Microsoft advises, you must not forget the password or you will not be able to get into the document. If forget, you have to turn to third-party software like Excel password rescuer for help.)

Method 2 of 4:

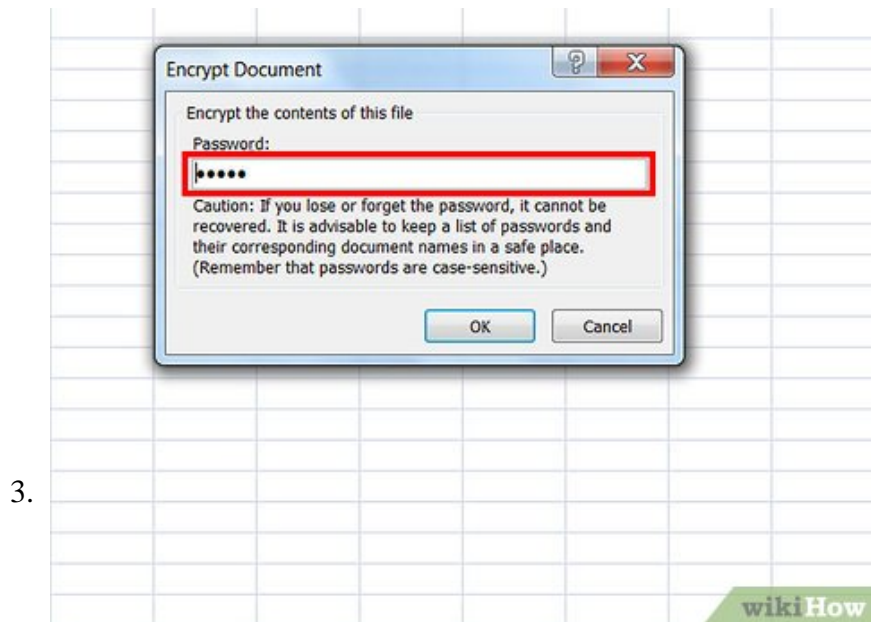

Resetting the password of An Encrypted MS Excel 2007 Document

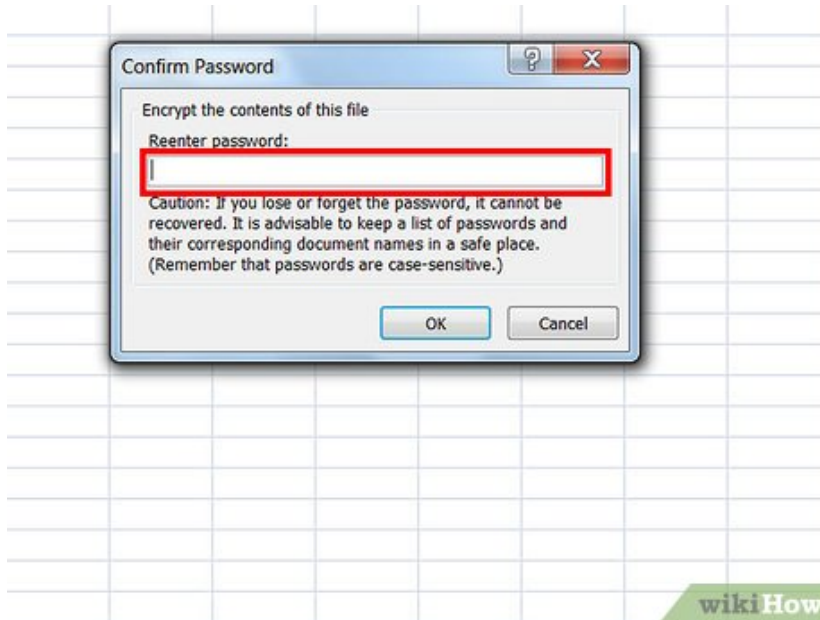

Click on the Office button-> Save as-> Tools on the right bottom of the Save as dialog box.

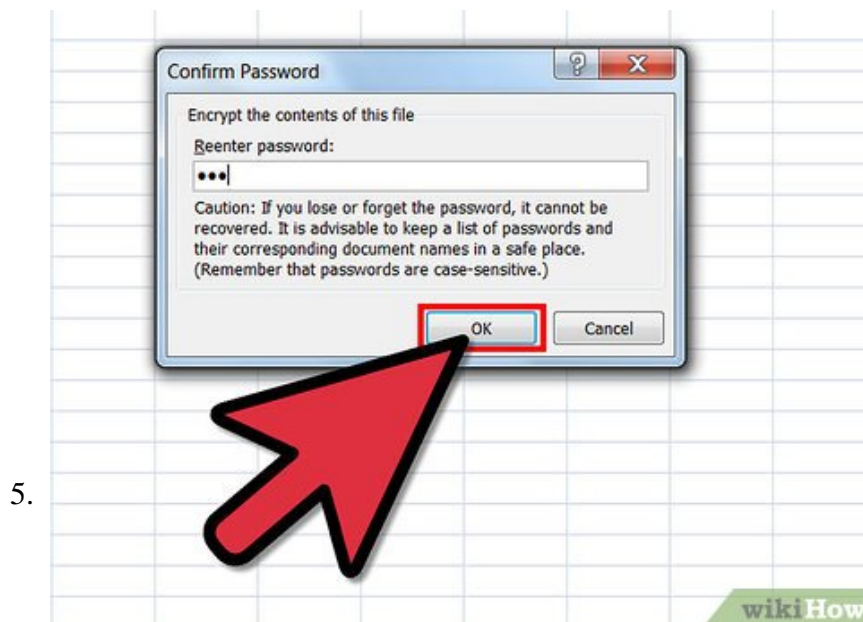

Click the Tools menu and choose General Options.

Type a password in the modifying password blank.

Retype the precious password in the blank and then press OK.

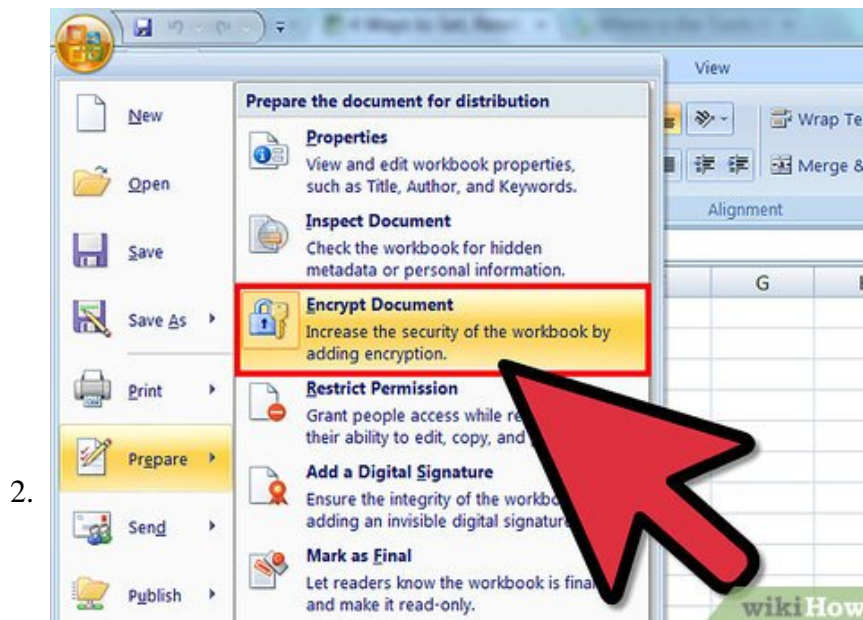

Click Save.

Method 3 of 4:

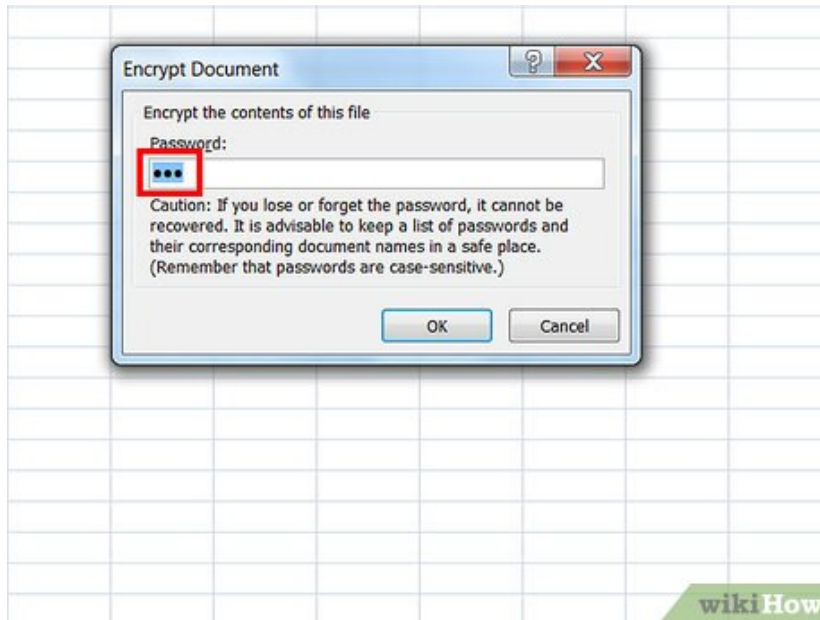

The way to Remove the Password of an Excel Spreadsheet

Enter the password to open the spreadsheet.

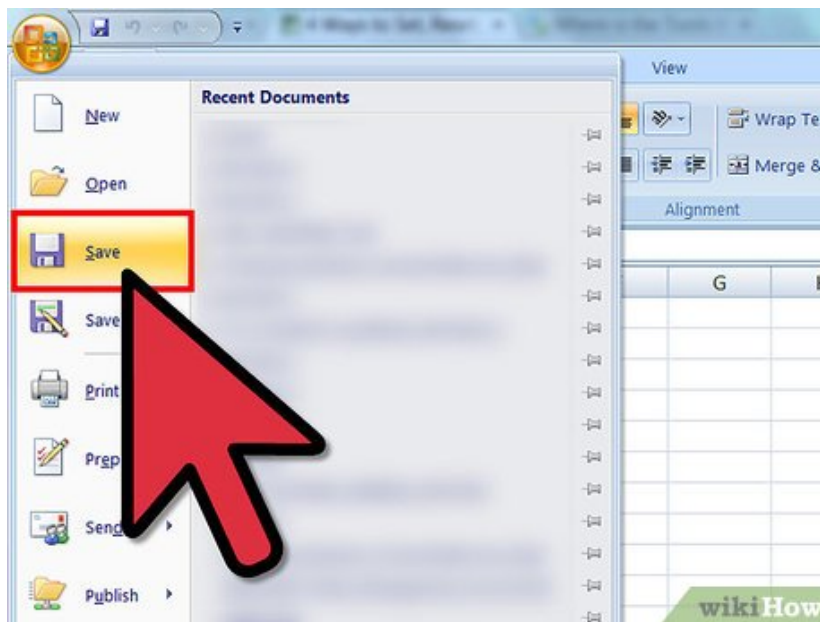

Click on the Office button-> Prepare-> Encrypt Document.

3.

Remove the punctiform password in Encrypt Document box and then click OK.

4.

Save the spreadsheet.

Method 4 of 4:
