

How to set Siri to read iPhone messages via AirPods

Notifying messages via Siri with AirPods on iOS 13 will help us read incoming messages without opening them directly.

Siri virtual assistant on iOS 13 is updated with the feature Notify messages via Siri with AirPods, read the name of the incoming message and the content of the message when the user can not open the message directly. Accordingly, this feature will read all new messages sent and respond to strange messages that are available through the settings available with Bluetooth headset.

When we connect the iPhone to the AirPods and turn on the feature, Siri will immediately recognize the new message sent and read the sender's name. If the same message was sent by the previous one, the name reading is ignored. Responding to messages can speak directly to Siri to turn them into text and send them right away. The following article will guide you how to turn on reading messages on iPhone.

1. How to "force" the iPhone to read it to you?
2. How to turn off automatic reading of incoming phone numbers on iOS 11.3

Step 3:

In this feature interface, you need to **enable message notifications with Siri** to use. Now Announce Messages with Siri from Messages is automatically turned on. So when a message arrives, Siri will read the content.

Note to users that this feature applies only to 2nd generation AirPods and some headsets that use the H1 wireless chip.
