

# How to Set Up Internet Connection Sharing for Windows XP

Microsoft Internet Connection Sharing enables a computer connected to the Internet via a cable or DSL modem to share its connection with other computers connected to it. Click Start, and then click Control Panel.

Method 1 of 2:

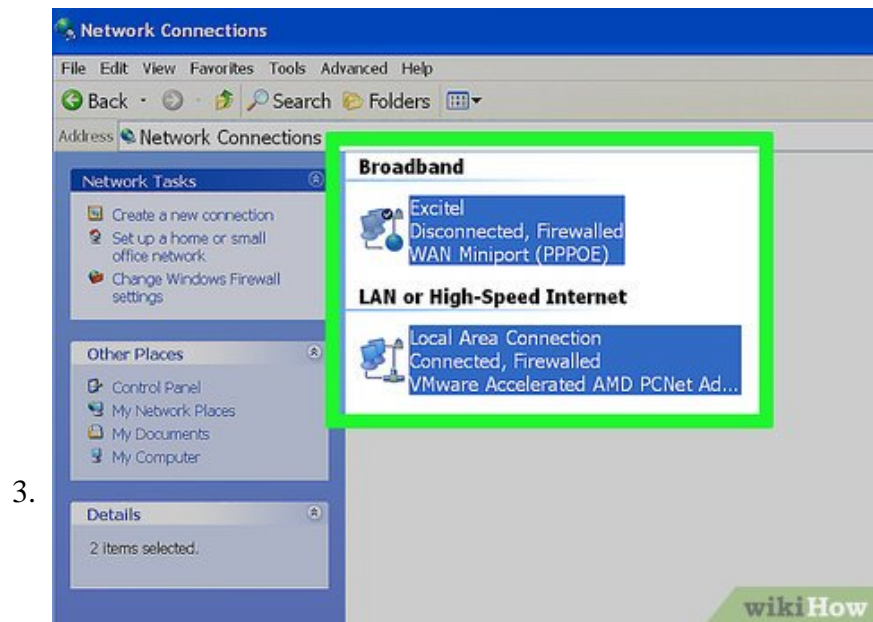

## On the Host Computer

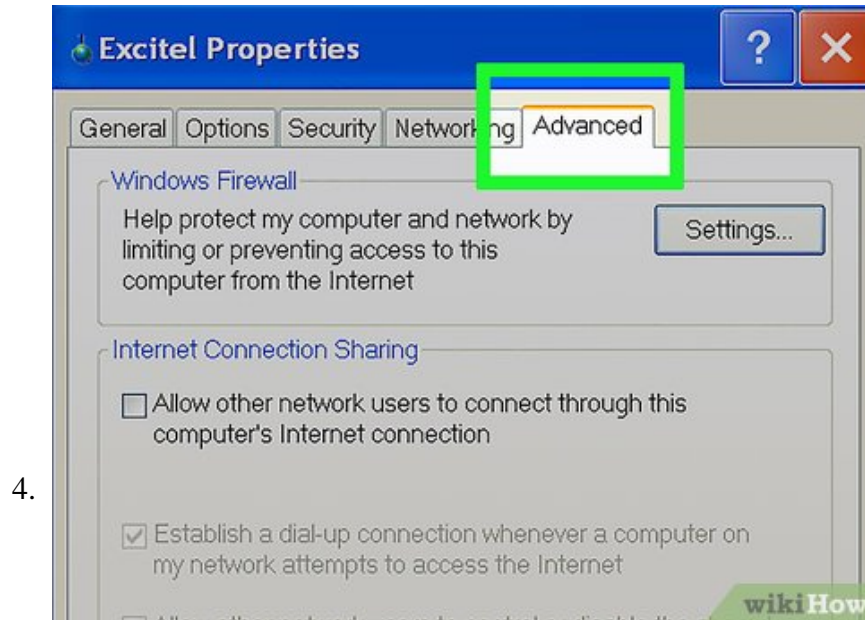

**Click Start, and then click Control Panel.**

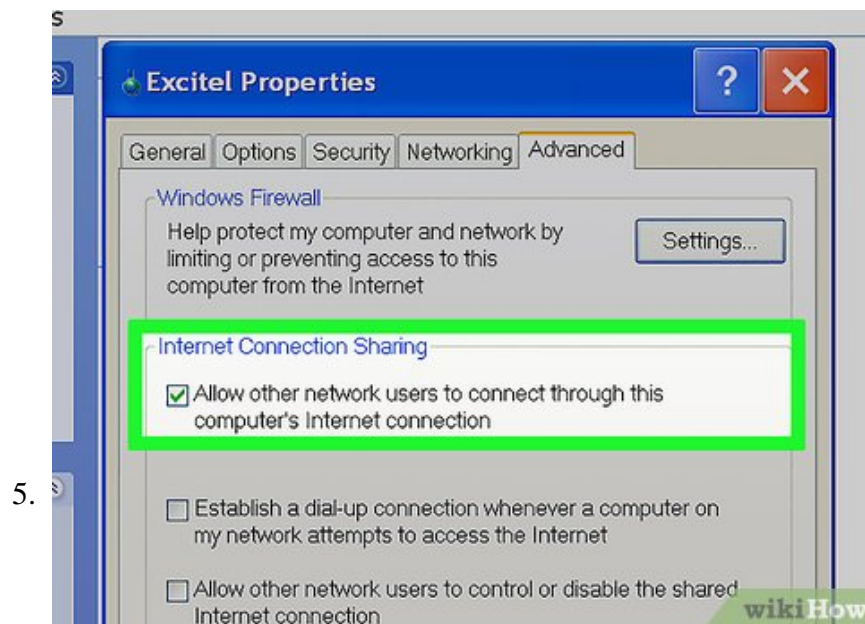

**Click Network and Internet Connections, Click Network Connections.**

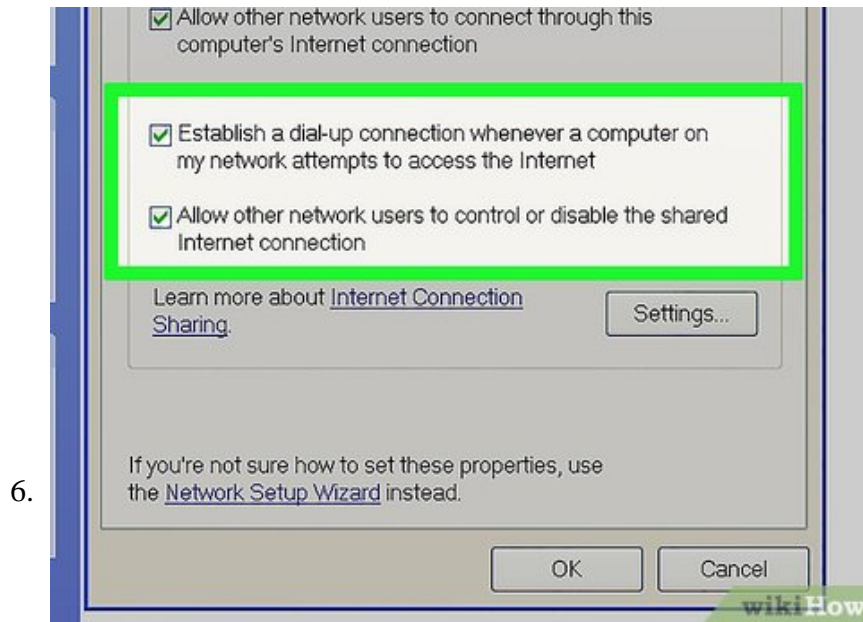

**Right-click the connection that you use to connect to the Internet.** For example, if you connect to the Internet by using a modem, right-click the connection that you want under Dial-up.

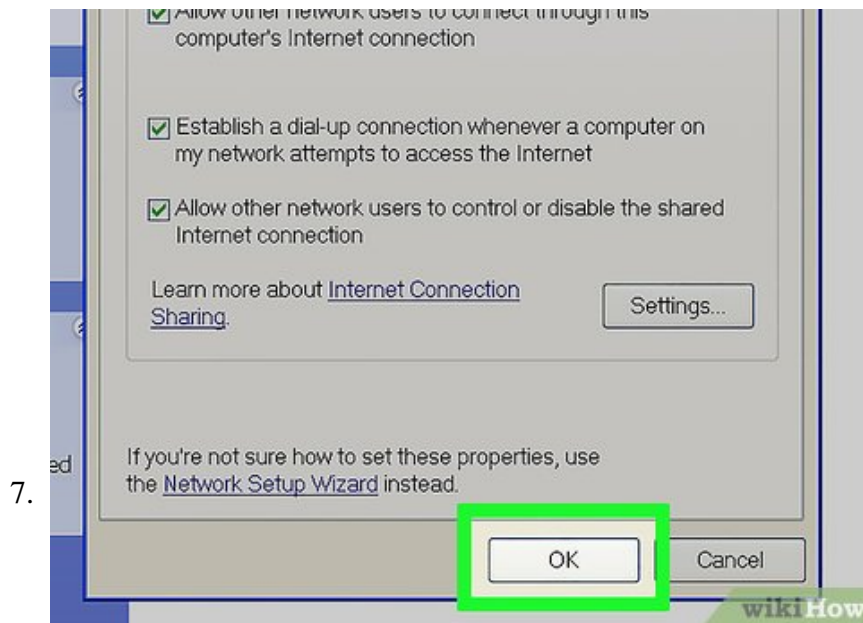

**Click Properties. Click the Advanced tab.**

**Under Internet Connection Sharing, select the Allow other network users to connect through this computer's Internet connection check box.**

**If you are sharing a dial-up Internet connection, select the Establish a dial-up connection whenever a computer on my network attempts to access the Internet check box if you want to permit your computer to automatically connect to the Internet.**

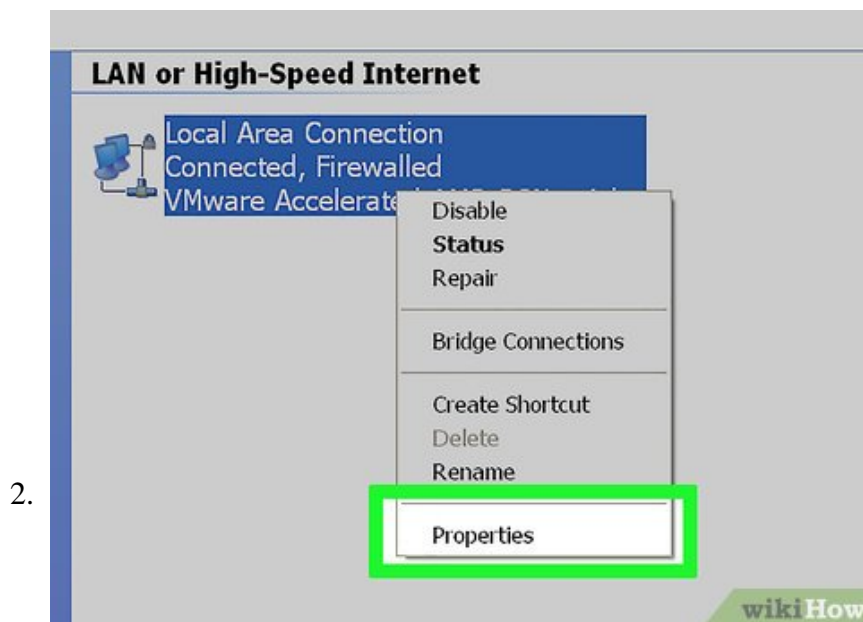

**Click OK.** You receive a message, Click Yes.

Method 2 of 2:

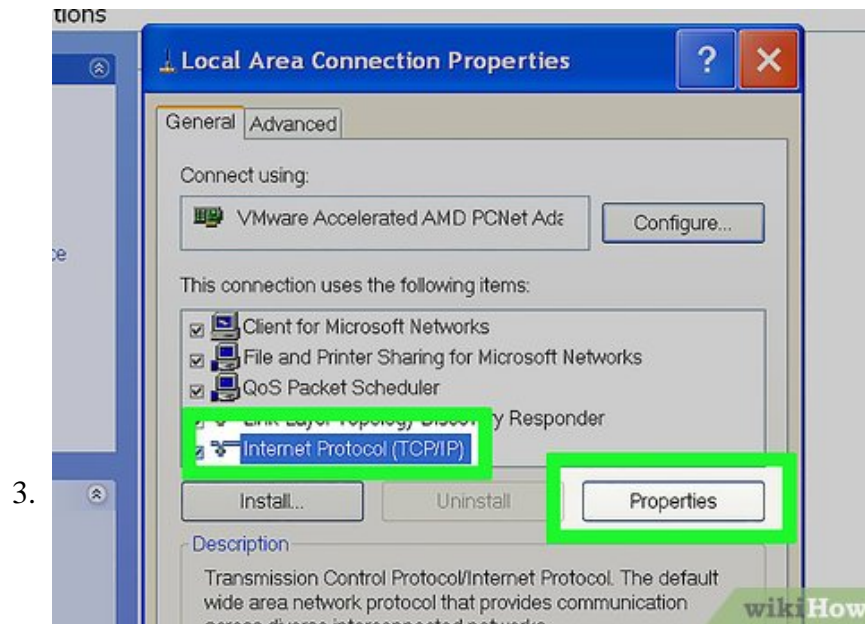

**On the Client Computer**

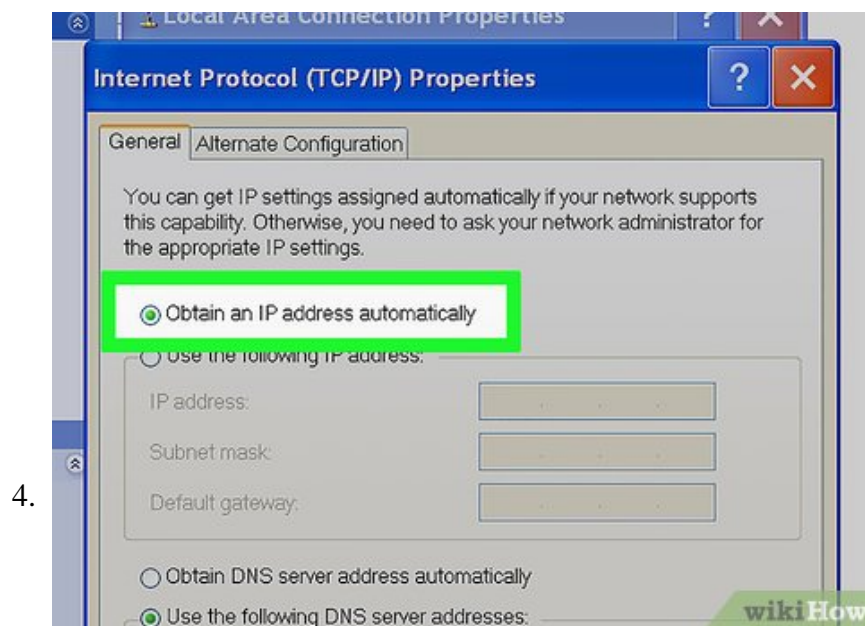

**Click Start, and then click Control Panel.** Click Network and Internet Connections. Click Network Connections.

**Right-click Local Area Connection, and then click Properties.**

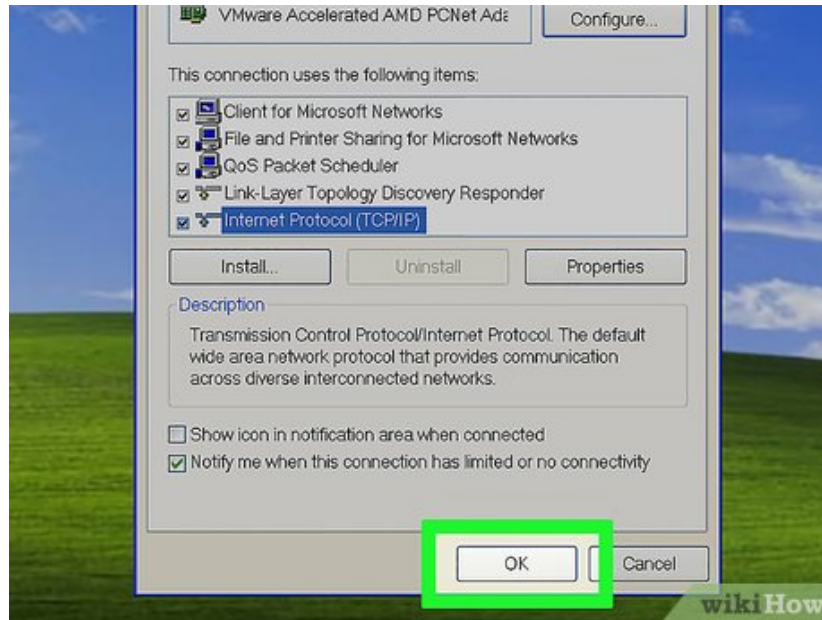

**Click the General tab, click Internet Protocol (TCP/IP) in the This connection uses the following items list, and then click Properties.**

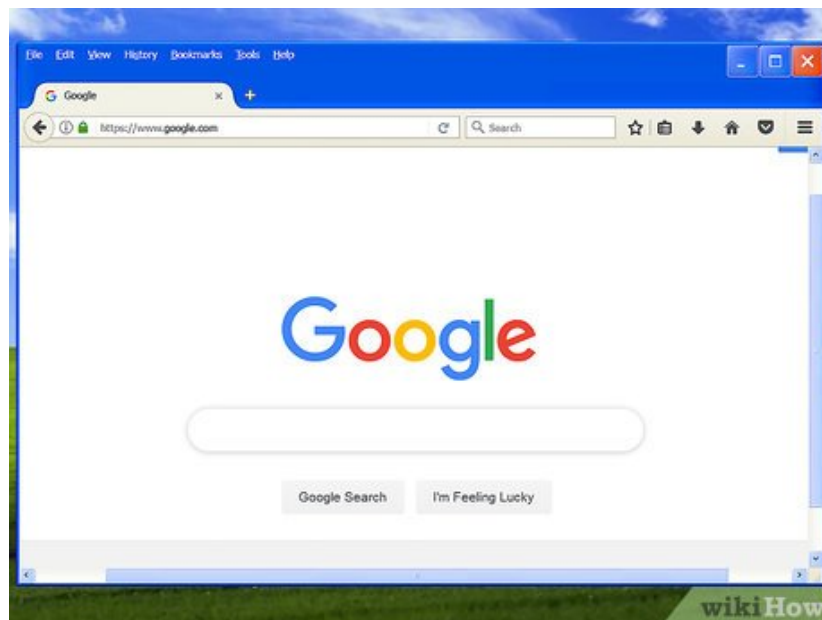

**In the Internet Protocol (TCP/IP) Properties dialog box, click Obtain an IP address automatically (if it is not already selected), and then click OK.**

5.

**In the Local Area Connection Properties dialog box, click OK.**

6.

**Open your browser to check, if what you did works.**
