

# How to set up privacy mode on Instagram

Along with Facebook, Instagram is now a social network that many people choose, to share information as well as images to friends. However, how to protect personal information on Instagram is not well known.

The leak of personal information on social networking sites like Facebook, or Instagram is not uncommon, anyone can become a victim of information theft hackers. With Facebook account, we have told you some measures to secure personal information, such as performing 2-layer encryption, hiding all Facebook personal information.

So with Instagram, social networks are also chosen by many users, how to limit the situation of information loss? In the following article, Network Administrator can help you increase the security of your account information, with some of the following tips.

**Note** , the following settings are similar to Instagram iOS and Android

1. Download the Instagram app for Android
2. Download the Instagram app for iOS

## 1. Delete location and location in the image:

Many people have a habit of taking pictures and then checking in at that location. However, this has inadvertently revealed your position to those who want to "pry" their information. If you accidentally took photos with the location, you can also delete that location.

### Step 1:

First of all, you log in to your Instagram personal account. At the main interface, we click on **the humanoid icon** . Click **on the image you want to delete the location** . In the image, you continue to click **the 3 dots icon** , the top right of the interface. Select Next **Edit** .

## 2. Block strangers on Instagram:

To protect yourself from strangers on Instagram, we can absolutely block them, not show any posts you post.

### Step 1:

First of all, we access the **personal Instagram page of the person who wants to block** and then click **the 3 dots icon** . Next, appear options for that account, click **Block** .

## Step 2:

Next, you will be asked if you want to block this Instagram account, click **Yes, I'm sure** . Soon, the **User blocked** message will appear. If you want to **unblock** , we also follow the steps above, and **Unblock** is okay.

### 3. Check the post photo tag mode:

When someone posts photos or videos and tags your name on Instagram, those posts will appear on your wall. And sometimes we don't like it and don't want our friends to automatically tag their names on any post. Therefore, users should set the tag control mode on Instagram.

#### Step 1:

At the main interface on your Instagram account, we click on **the tag icon** as shown below, then select **the three dots** in the top right corner.

No photos to show

When people take pictures of you,  
their photos can appear here.

**Step 2:**

By default on Instagram, posts will be in auto tag mode. Please select the **Add Manually** section to control the post mode.

← OPTIONS

#### 4. Switch to private mode on Instagram:

Switching to private Instagram account status will show those on the list who are following you the article. As for public mode, anyone can see all the posts we post.

On your personal profile page on Instagram, click on **the 3 dots** or jagged **icon** as shown. In the installation interface, scroll down to the **Private Account** section and then **push the horizontal bar to the right to turn on the privacy mode for the account** .

## 5. Limit using Hashtag:

When we use the Hashtag in Public mode of certain posts, the post will display on the corresponding Hashtag page. And that will help more people know your article, especially with the popular Hashtag. However, that is why we can become the subject of scrutiny or talk of people. Therefore, limit the use of Hashtag as low as possible to ensure privacy for Instagram personal accounts.
