

How to set up Windows Hello on an HP laptop

With the method of setting up Windows Hello on HP laptops using fingerprints, users can rest assured about the security of all their information stored on the device. Furthermore, this feature allows you to log into the operating system quickly and conveniently, up to three times faster than the traditional method.

Windows Hello is a new feature that Microsoft has updated in its Windows 10 operating systems. With this addition, users can now enhance their security while logging in much more simply and quickly compared to using a regular password.

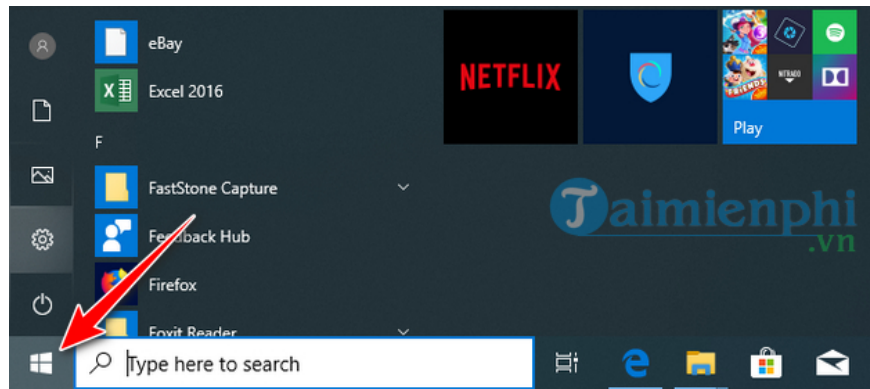

Setting up Windows Hello on an HP laptop

In this article, Taimienphi will show you how to use and set up Windows Hello on your HP laptop using your fingerprint quickly and conveniently!

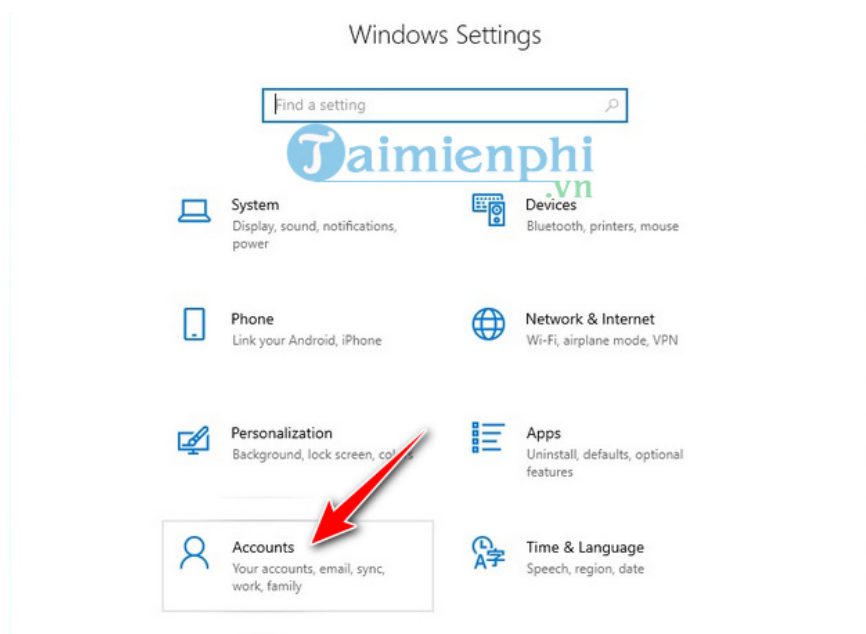

Setting up Windows Hello on an HP laptop using fingerprint

First, to ensure a successful Windows Hello setup on your HP laptop using fingerprint authentication, you need to make sure your device has the necessary hardware and that you have logged into your Microsoft account. If you don't know how to register, you can refer to the guide on **creating a Microsoft account** that Taimienphi has previously published.

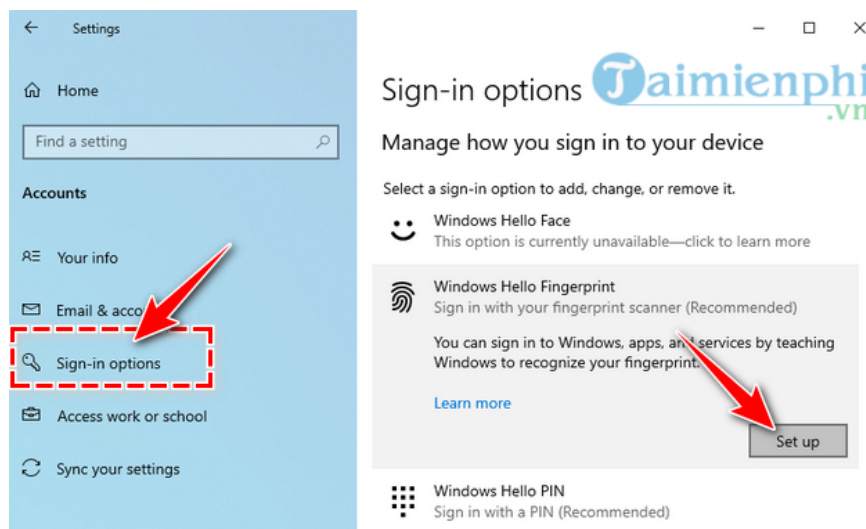

Step 1: Click the **Windows** button in the bottom left corner of your screen or on your keyboard. Select **Settings**, **which** has a gear icon.

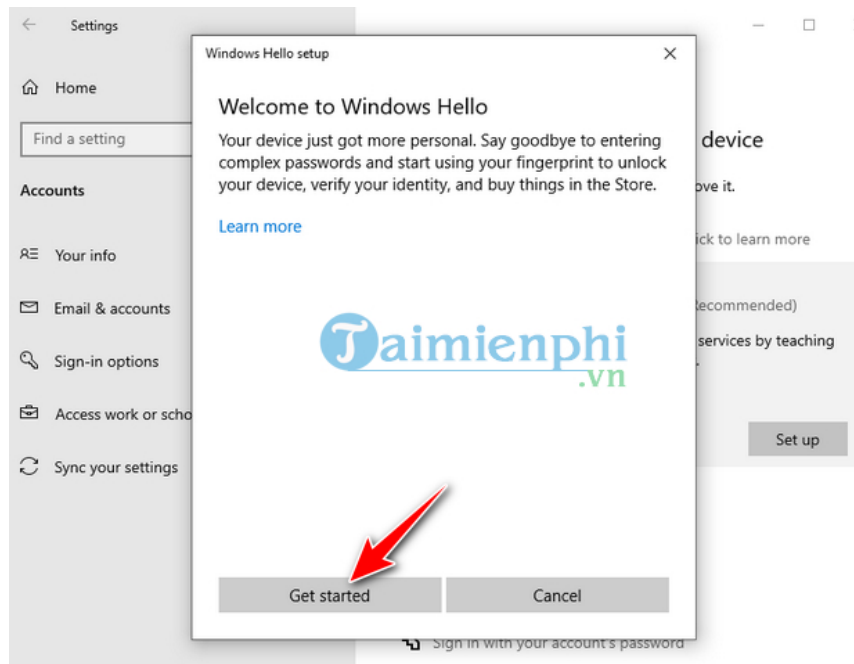

Step 2: Next, click on the **Accounts** section ;

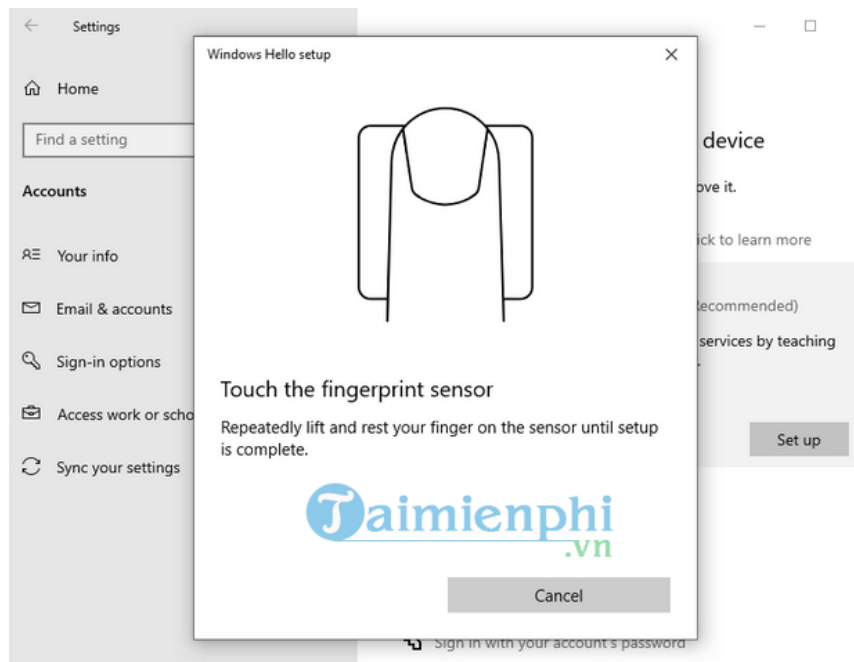

Step 3: In the new window, select **Sign-in options** . Then, select **Set up** under **Windows Hello Fingerprint** .

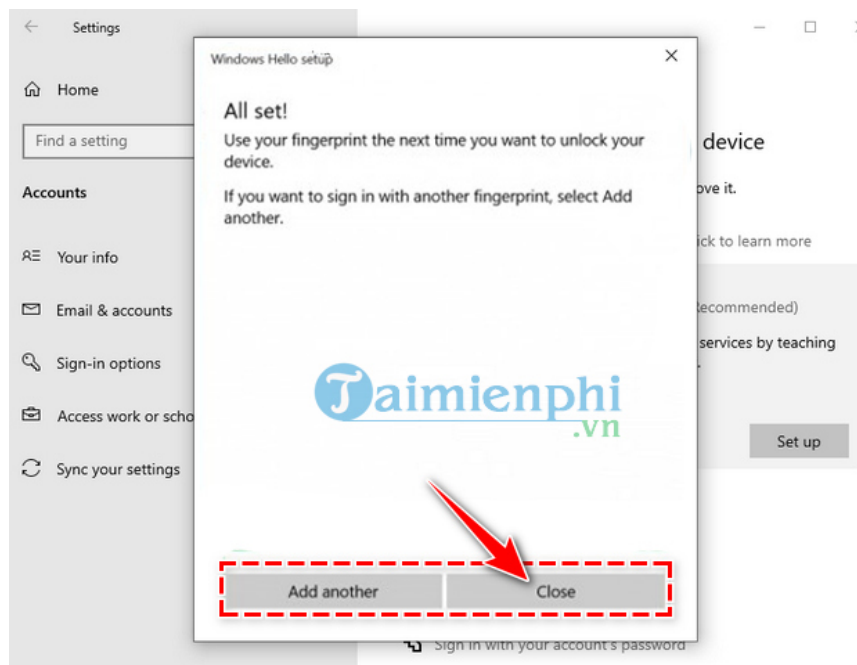

Step 4: A notification window will appear; click " **Get started** " to begin the installation process.

Step 5: Touch and move your finger on the fingerprint scanner built into the laptop;

Step 6: Once the process is complete, click **Add another** to set up **Windows Hello Fingerprint** for another finger, or select **Close** to finish.

So now you can use your fingerprint to unlock and quickly access your device without having to remember or enter passwords. Setting up Windows Hello on your HP laptop using your fingerprint is just one of the interesting security features Microsoft offers users.
