

How to set YouTube to auto-rotate on Samsung phones

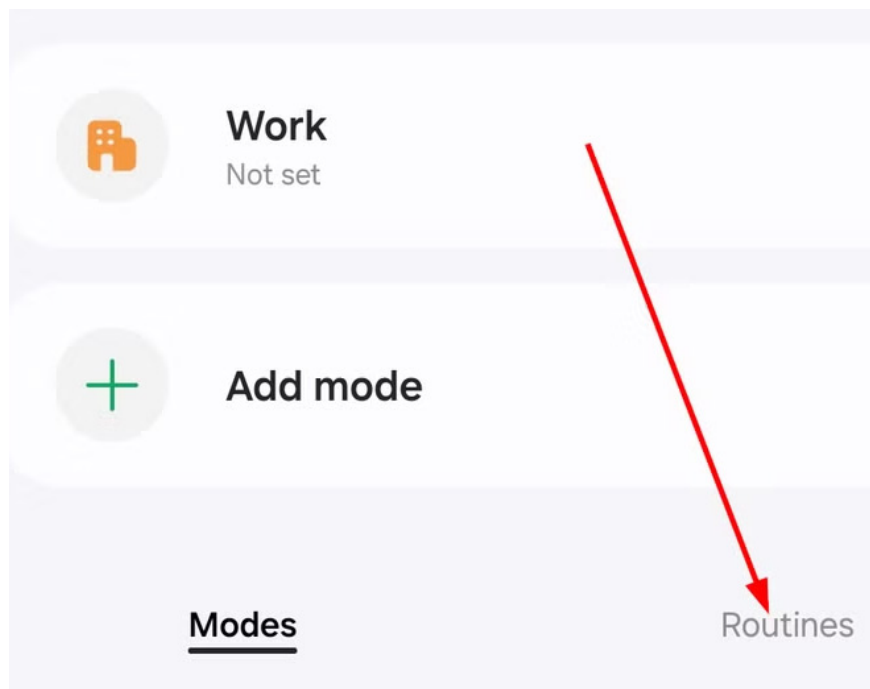

Samsung phones have Samsung Modes and Routines that allow you to enable preset settings. Here's how to set YouTube to auto-rotate on your Samsung phone.

To rotate the YouTube screen, users will need to tap the icon on the video screen. However, on Samsung phones, there is a Samsung Modes and Routines mode that allows you to activate preset settings for activities like Sleeping or Driving, while Routines provides "if-then-then" automation according to your needs. Here is a guide to set YouTube to automatically rotate on Samsung phones.

How to enable YouTube auto-rotate on Samsung

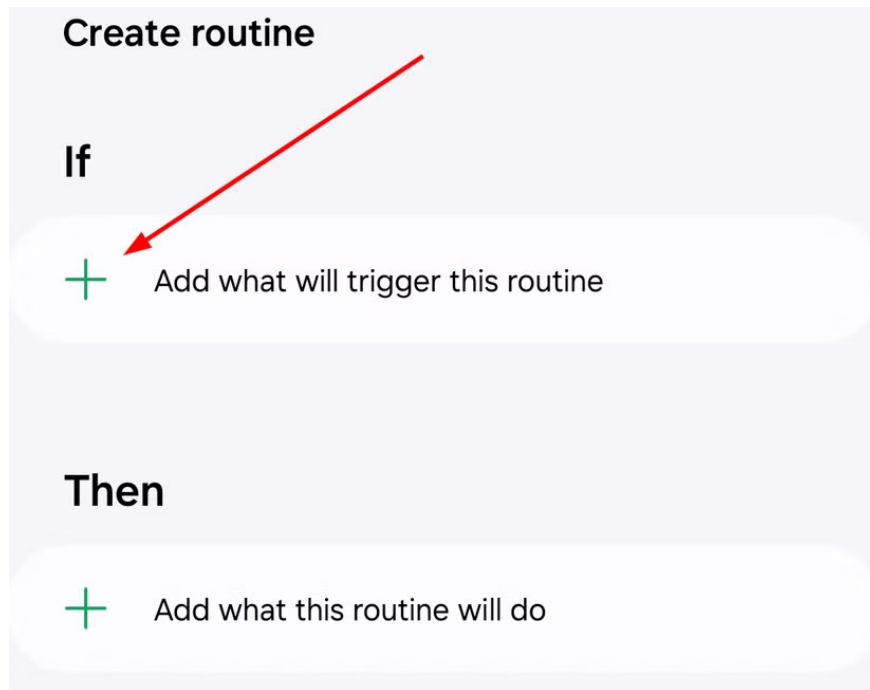

Step 1:

First, users access Settings then click on **Modes and Routines** . Next, users **click on Routines** at the bottom of the interface to set up.

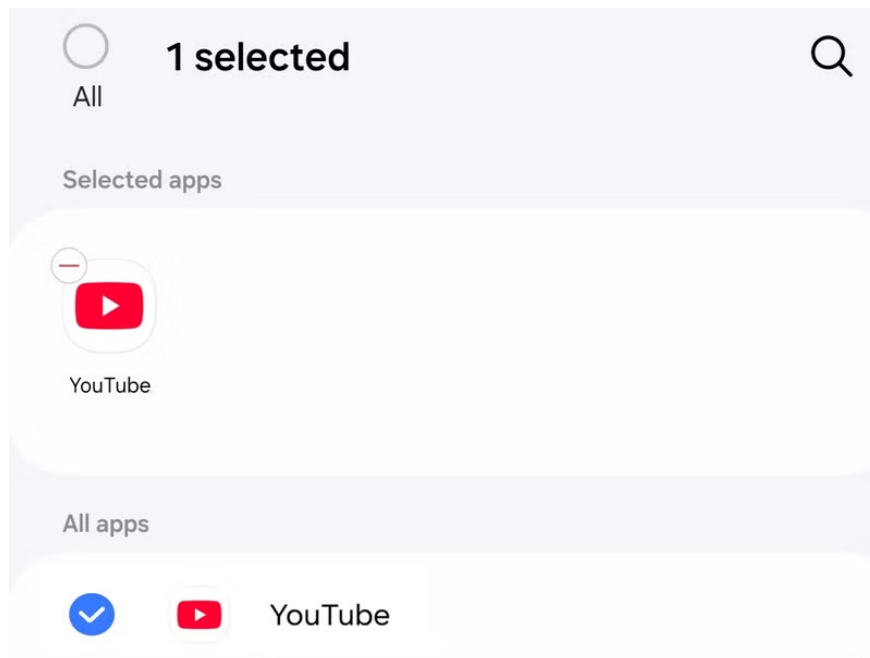

Step 2:

User **clicks on the plus sign** to create a new procedure. At **If clicks on the plus sign** to add an 'if' action.

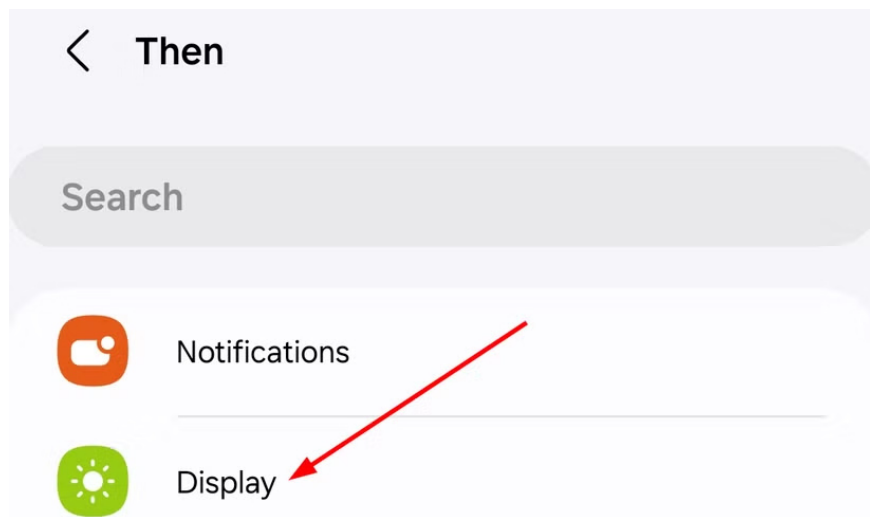

Scroll down to **Event**, select **App opened** , then select **the YouTube app** to add to the flow.

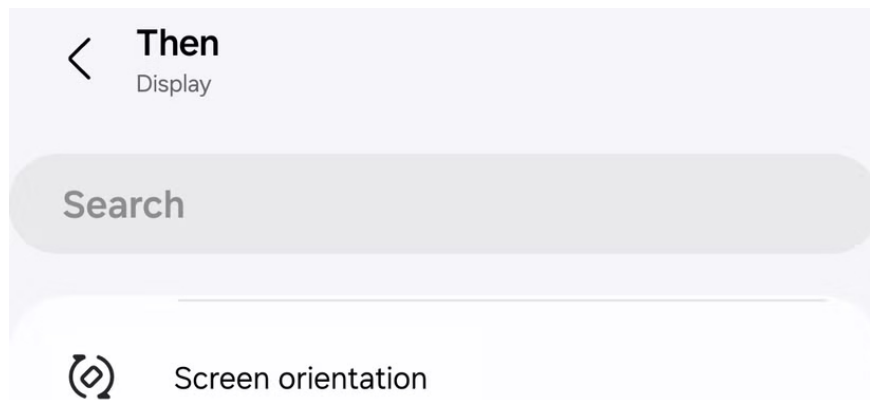

Step 3:

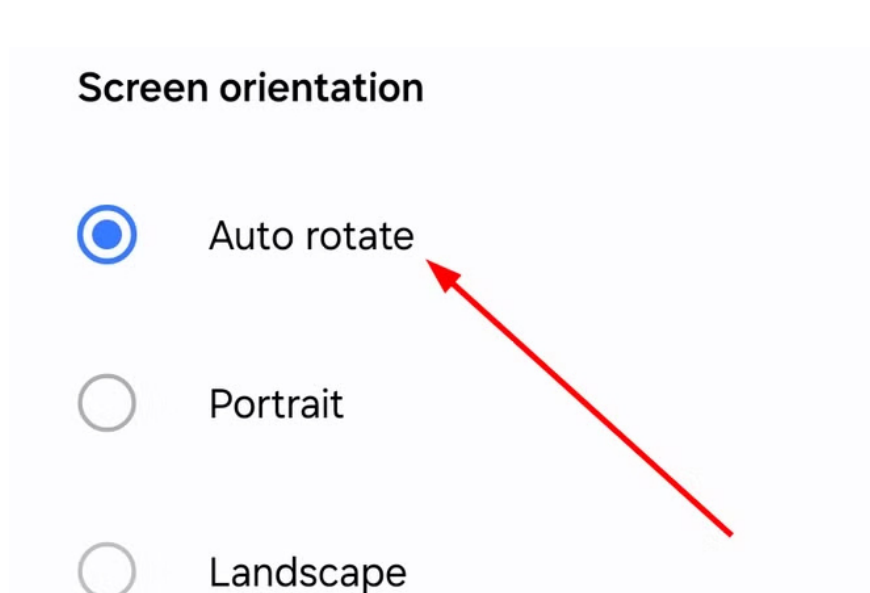

Continue to scroll down to **the Then section** and select **the plus icon** to add an action, we click on **Display** .

Now the user **selects Screen orientation** to select the screen rotation operation for YouTube when using.

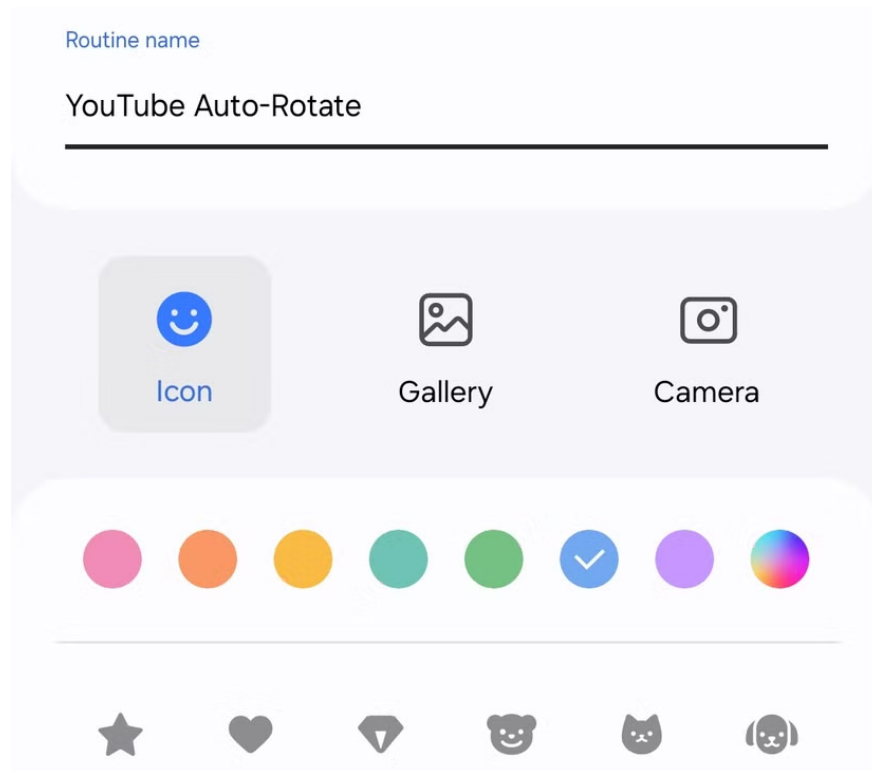

Then you **select Auto-rotate** to automatically record YouTube screen video. Click Done to save this process.

Step 4:

The user **names this process** to add and then selects the icon for the newly set up process.

So every time you open YouTube, the screen will automatically rotate to landscape mode if you tilt your phone to one side.
