

How to share a screen between 2 Macs

Sharing two screens between a Mac when sharing a local network is simple, based on the features available.

Sharing screens between computers will often need a support tool. However, for anyone on a Mac, you can share screens between computers when sharing a local network with an existing feature. This is the Screen Sharing feature, which shares the screen over the local network that Macs are using. This feature makes accessing the screen between two Macs easier. The following article will guide you how to share your screen on Mac.

Instructions for sharing a Mac screen

Require computers connected to each other to use the same local area network.

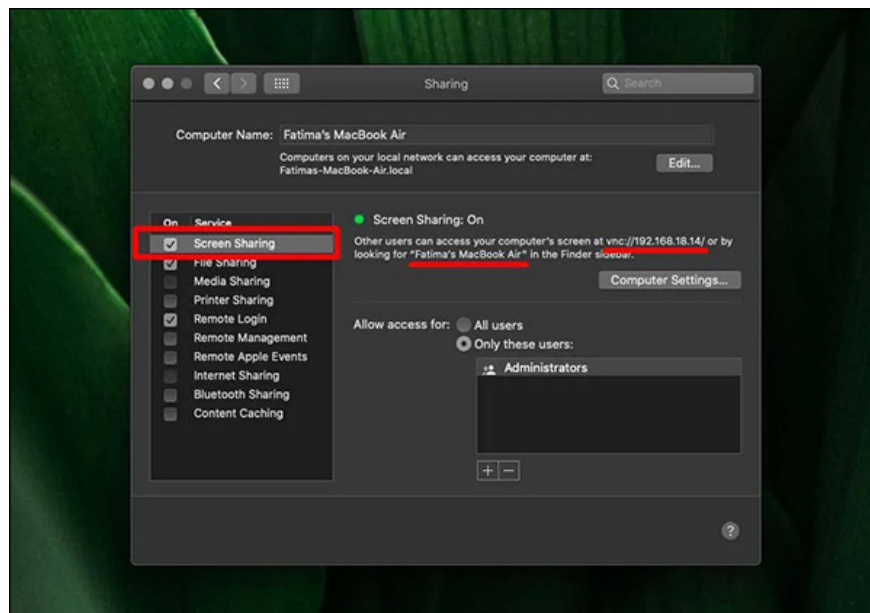

Step 1:

First, you need to enable the Host Mac feature on the computer you want to share the screen with. Click **System Preferences** and select **Sharing** .

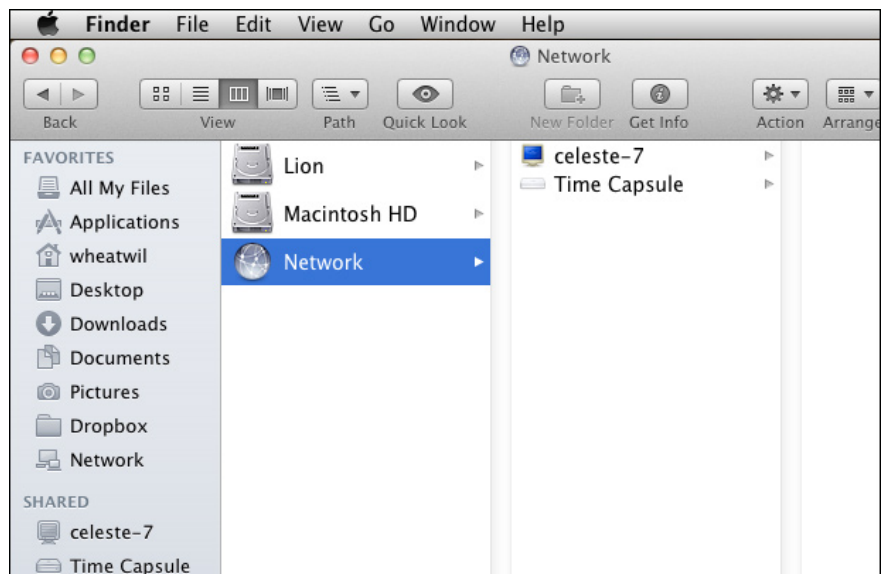

Step 2:

Next in the next display interface click on **the Screen Sharing feature** to use. The Sharing feature is then enabled on the Mac. The user selects the account you want to share the screen with. Your Mac will now have the network address and network name accessible to other Macs.

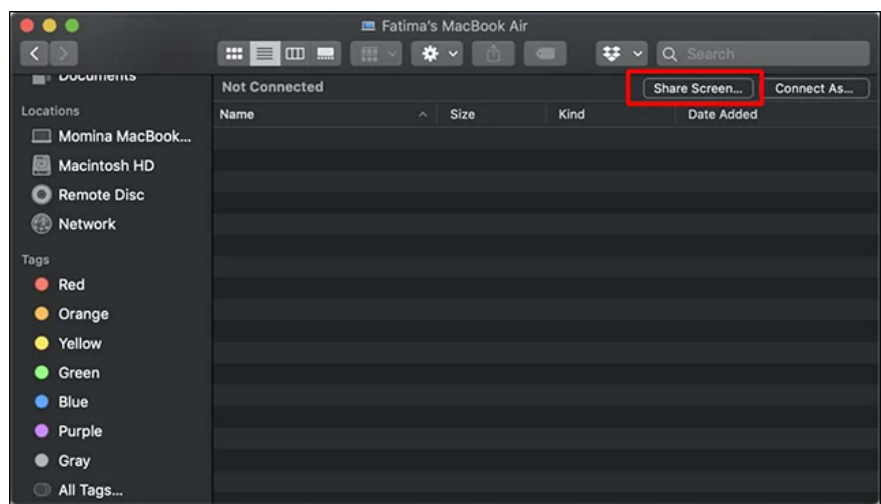

Step 3:

On the Mac you want to access , open **Finder** and select **Network** .

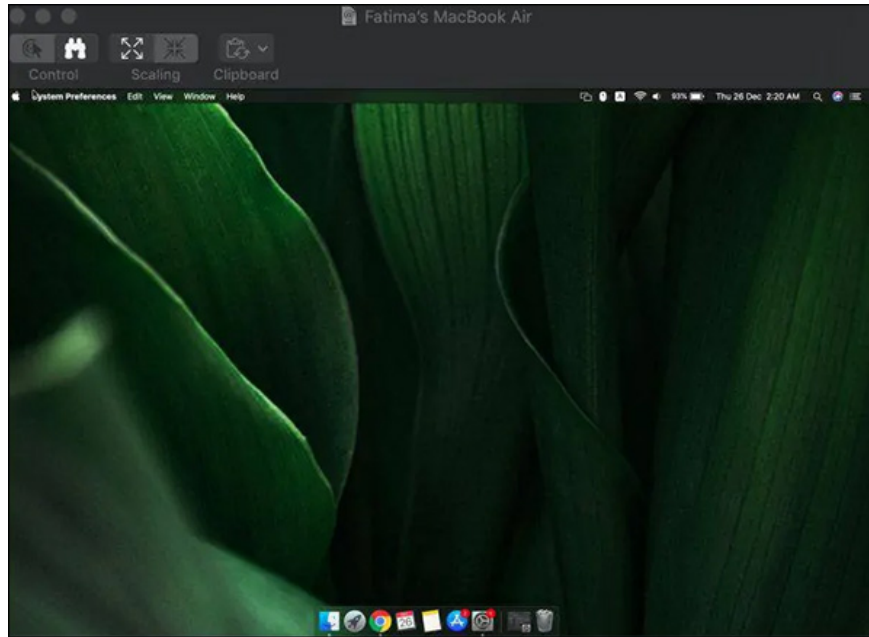

Step 4:

Under Network users will see the name of the Mac they want to access, click on the **Share Screen** button at the top. Now a dialog box appears to ask the user to **enter the Mac account name and password** you want to access the screen.

Step 5:

Once you've entered the correct name and password of the computer you want to access the screen, an interface displays the screen from that Mac.

This feature just stops at the basic screen sharing level, allowing us to see operations from other screens, but can't control it. If you want to control, at the computer want to share the screen must click Computer Settings to proceed to set the content.

I wish you successful implementation!
