

# How to share files via QR codes on Fladrop

Fladrop supports rapid sharing via QR codes without you having to send links or perform too many operations.

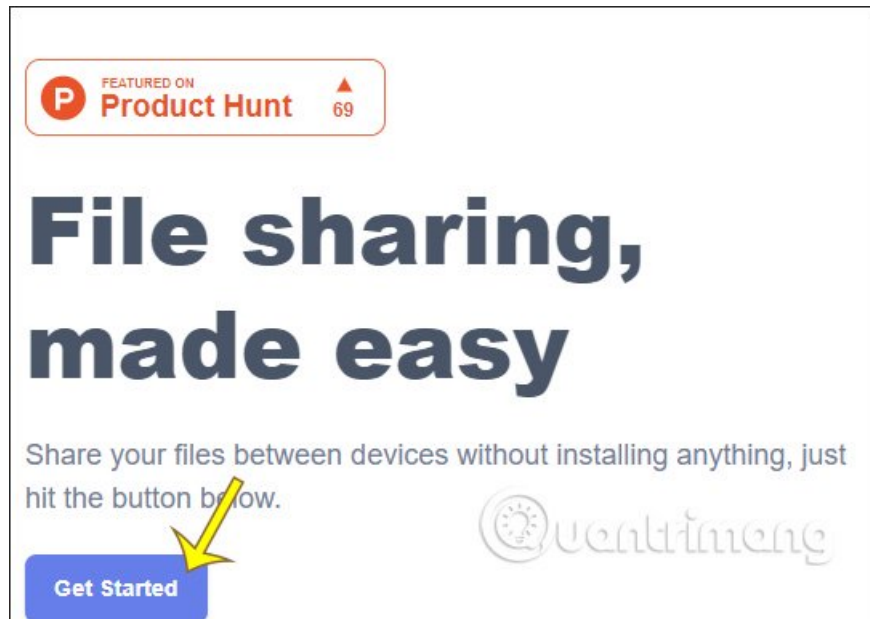

Sharing and sending files online is now very simple when there are many file sharing tools for users to choose, without using Gmail as before. The way to share files is very diverse, such as via links, via QR codes like Fladrop tool for example. Fladrop implements file sharing across and end-to-end encryption so users feel secure in file sharing. The following article will guide you how to send files on Fladrop.

## Instructions for sharing files on Fladrop

### Step 1:

First of all users access the Fladrop home page by following the link below and **click Get started** in the top interface to use.

<https://fladrop.com/>

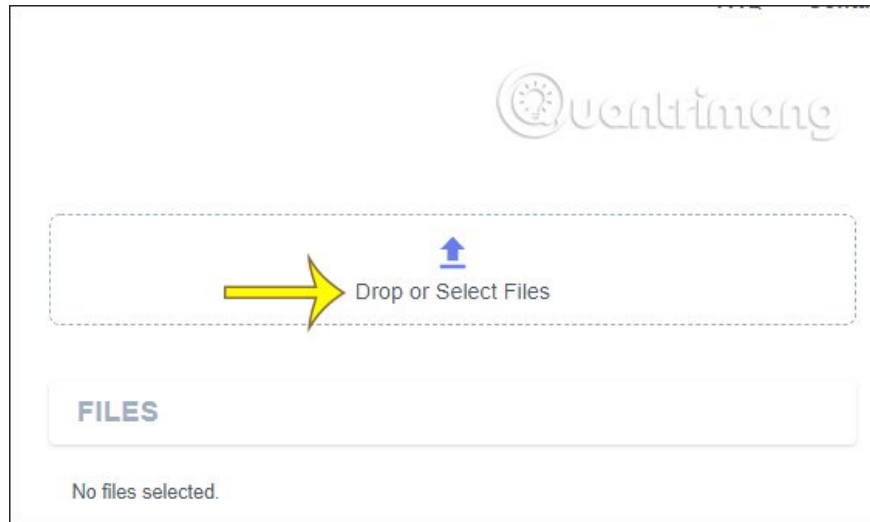

We will now see **the QR code for sharing use** and the option to copy for sharing. When **the recipient scans the QR code** , then **the file upload interface will appear** .

**Note that** both the file and receiver must show the interface during file sharing.

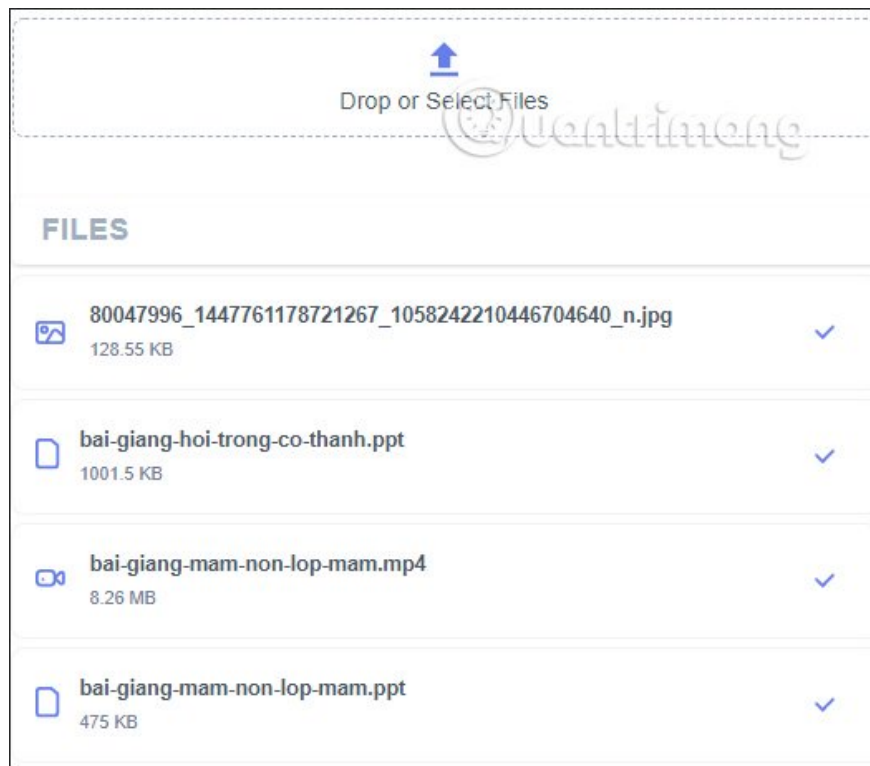

## Step 2:

File sharers drag and drop files or click **Drop or Select Files** to share. The service allows sharing multiple files at the same time without any limitation on the file format. The shared capacity can be up to nearly 260MB.

## Step 3:

The selected files are now uploaded to the Fladrop homepage.

File recipients only need to click the download icon to download the file. The shared page link will disappear when the sharer reloads the page. Shared files will self-destruct after 24 hours.
