

How to share the screen on Messenger when making a video call

Video calling Messenger has an option to share your device screen, or another window interface on your computer, to transfer the content on your screen to other people's screens.

Video calling Messenger has an option to share your device screen, or another window interface on your computer, to transfer the content on your screen to other people's screens. Then all the content on the window interface you choose, or the user actions performed on the screen will be transferred to the video call interface on the opponent's screen. In case you want to guide your friends, you can also use this feature on Messenger. This feature is also quite similar to the screen sharing feature on Zalo, when we make video calls. The following article will guide you to read how to share screens on Messenger.

1. Share screen on Messenger Android, iOS

Step 1:

At the Messenger account interface you want to call, we click **the video call icon** . Then wait for the opponent to receive the call.

Step 3:

Now you just need to exit Messenger and open any interface on your phone, perform the operations as usual. All actions, interface content will be transferred to the opponent.

When you want **to finish sharing the screen** , go back to the Messenger interface, then click the red notification bar to return to the video call interface. Now press **the Stop button** to turn off screen sharing.
